

THE MUNCIE POST-DEMOCRAT

OL. 2. NUMBER 13

MUNCIE, INDIANA, FRIDAY, MARCH 31, 1922

SUBSCRIPTION PRICE \$2.00 A YEAR IN ADVANCE

Safety First Ought to be The Motto of Those Who Are Dodging From the Law

The Post-Democrat has not the slightest interest in the outcome of the contest between Senator New and Albert J. Beveridge, but when it comes to using the senatorial contest as a basis of political trading which threatens to turn the democratic county organization over to the Billy Williams outfit, we reserve the right to make a few remarks.

Week before last we called attention to the fact that a few men here who had been threatened with indictment in the federal court, were being forced into allying themselves with the New forces in this county, and that there were indictments leading to the suspicion that somebody, not necessarily connected with the department of justice, but somebody, nevertheless, who had assumed to promise these men protection from federal prosecution, in return for the efforts they might put forth in behalf of Senator New and the entire Billy Williams slate in Delaware County.

During the past four years a large group of men claiming to be democrats have consistently taken part in republican primaries and have, at the same time, attempted to dominate the democratic party.

We have no objection, whatever, to democrats taking part in a republican primary, after they vote in a republican primary, calling for a republican ballot, thus identifying themselves as republicans, let them stay in that party, where they belong, and let them, and their masters thereafter confine themselves solely to the affairs of the party to which they assert they belong when they call for republican ballots.

We do not object, either, to these men, democrats and republicans who are threatened with imprisonment in federal prison, using every effort within their power to avoid prosecution, as long as that effort does not mean the commission of some other crime.

If they find a republican organization here so corrupt and so abjectly subservient to the desires of the instant republican national administration that they will dicker with criminals for New votes, then we can hardly blame them for grasping at the straw which providence sends their way.

We do object, however, to the efforts of these same democrats to not only deliver to Harry New and the Billy Williams slate, but also to say who shall compose the democratic organization and the democratic county ticket.

It seems to the average democrat that these discredited democrats, who disrupted the democracy last fall by forcing their will upon the party, ought to be satisfied to deliver to the New outfit, without attempting to work both sides of the road. If safety lies along the road traveled by Billy Williams, why not travel that road alone, instead of wandering off on other paths which may be beset by snares and pitfalls which will cause their downfall?

Keeping out of the penitentiary ought to be enough in itself. These individuals are taking in too much territory. It may be that the publication of this may cause another band of outlaws to hold up, and attempt to murder, the writer, but fear of attack by masked thugs will not prevent us from presenting facts to the public that they ought to know.

The Post-Democrat would like to see the democratic party in clean hands and would like to see the right kind of a ticket nominated, and those who are shuddering in their time, between shudders, trying to cowardly hide with fear of federal prosecution, and who spend their fix up a democratic "slate" might just as well make up their minds that they

simply cannot accomplish their entire program.

TEN BABIES DESERTED

Buenos Ayres—During the last two months ten babies have been abandoned on the steps of local churches.

"MOURNING" FOR BUSINESS
New Orleans—A firm here sent out black-bordered letters to its "dead" accounts soliciting business. It got a large response.

AGED RECTOR'S TRAGEDY
Norwich, Eng.—Supposedly recovering from influenza, Rev. Charles Alexander Hope, 80 years old, escaped from his nurse and drowned himself.

Slump Revealed In Personal Tax List

Table Prepared by State Officials
Shows Marked Decrease in Livestock

Ohio's slump of \$65,635.19 in rural personal tax valuations for 1921 is graphically shown in a table prepared by Secretary E. M. Butler of the state tax commission during the past week.

The compilation shows the marked decrease in the number and value of horses, cattle, sheep, hogs, poultry and mules on Ohio farms in 1921 as compared with 1920.

In 1921 there were returned for taxation 744,577 horses with a valuation of \$62,673,322, an average value of \$24.17. In 1920 there were 800,013 horses, valued at \$72,375,486, an average of \$90.47.

The figures for cattle are:
1921—1,674,332, total valuation \$36,312,574; average \$29.93.
1920—1,722,290, total valuation \$90,549,566; average \$52.57.

Sheep:
1921—1,723,377, total value \$7,850,164; average \$4.56.
1920—1,750,360, total value \$17,282,350; average \$9.71.

Hogs:
1921—2,162,555, total value \$21,531,237; average \$9.96.
1920—2,431,964, total value \$34,518,231; average \$14.19.

Poultry:
1921—12,854,887, total value \$11,307,823; average 88 cents.
1920—12,583,743, total value \$13,294,271; average \$1.03.

Mules:
1921—32,767, total value \$2,974,745; average \$90.78.
1920—33,986, total value \$3,380,350; average \$99.46.

Other factors enter into the situation, to be sure, but the table just shown accounts for \$58,248,983 of the total decrease.

TWINS BORN AT SEA ARE NAMED "SINK" AND "SWIM"

Hongkong—While traveling from Manila to Hangkong on a liner Mrs. Wu Ling, a Chinese woman, became the proud mother of twin boys. The passengers decided a christening party was in order, so they collected a purse of \$500, presented it to the mother, and christened the babies Sink Ling and Swim Ling.

GIRLS' PLOWING MATCH

Kirkstead, Eng.—Miss Janet Jackson of Lincolnshire has challenged Miss Jean Hutchinson of Northumberland to contest for the world's plowing championship.

Break Up the Dance Halls

There is a strong possibility that the police will put a stop to the lewd dances which take place nightly in all parts of the city.

These dances are a disgrace to a civilized community. Sodom and Gomorrah would have turned green with envy if the denizens of those basted communities could rise from their graves and witness the lascivious contortions of the boys and girls who engage in these so called dances.

They are ruining more boys and girls right here in Muncie than all other agencies of evil combined. These dances are open to the public and no matter how innocent the boys and girls may have been before they began attending them, their morals are bound to give way before the indecent contact incident to the writhings and contortions which the promoters of this growing enterprise are pleased to call dancing.

Girls from thirteen years of age up attend these dances and many of them, whose minds should be pure and free from thought of evil, are more versed in the ways of immorality than older women who have openly lived lives of shame.

Something should be done at once to curb this growing evil. Parents should concern themselves more over the doings of their boys and girls. If your child is attending these dances, he or she is in danger of ruin.

Assassins In Black Mask

Last Friday night a band of armed thugs, with their faces completely obscured by black masks, jumped from an automobile on North Mulberry Street and murderously assaulted the editor of the Post-Democrat and his eighteen year old son.

Another automobile accompanied the death car, but the skunks occupying that car did not get out. Guns were stuck in the faces of the editor and his son and they were ordered to throw up their hands. The former grasped the gun and succeeded in discharging it at the thug who held him up, possibly wounding him.

Just as the shot was fired, one of the gangsters struck the publisher a severe blow with a blackjack and at the same time one of the scoundrels beat the boy over the head with the butt of a revolver, after the boy had shown resistance. The gangsters then jumped into their car and drove away, accompanied by the other car.

Before leaving, however, the assassin who had beaten the defenseless youth, took deliberate aim at him and shot, the bullet going wild, however.

The attack was cowardly, and was evidently the work of men who would fear to show their ugly faces in open combat. It was very evidently the work of men who fear the Post-Democrat, and who took that method of attempting to instill fear into the heart of the publisher.

It was along the same line as that adopted by the scoundrel who threw a brick through the window at police headquarters, and the cowards who sent Ku Klux messages to police officers.

The Post-Democrat wishes to serve notice, here and now, to those who hope to intimidate us into servile fear of reprisals, that they have picked the wrong bird. The rule of the blackjack, the automatic, the black mask and the dark lantern, never works.

It might be possible for these dastardly cowards, who did not hesitate to beat up a boy because of their hatred and fear of his father, to inflict some serious injury on their victim, or even murder him but sure and sudden punishment awaits the perpetrators.

This is a civilized community, populated by people who believe in law and order and who abhor crookedness either in business or politics. Muncie has a population of nearly forty thousand people but out of that number not one per cent condones an action similar to that pulled off last Friday night.

Muncie is not going to submit to the rule of such a small majority. If bands of gangsters are allowed to go unpunished, then law and order ceases and every man should carry a gun to protect his life.

The Muncie Press was the only one of the two dailies here to find fault, editorially, with the vicious assault of the masked assassins. It very truthfully said that the men should be apprehended and given the maximum punishment provided for by law. It might have gone farther and said that the cowards who hid in their obscure offices and inspired the attack, should also be dealt with as severely as the men who wore the masks.

The Star did not consider it worth while to make editorial comment on an act which was meant to strike at the very heart of the freedom of the press. The Star evidently fears to antagonize the thugs. Possibly the editor would be afraid to go home in the dark if it said naughty things about the rude thugs who wore terrifying masks and carried pop guns.

There are some who seem to think that the attack was made by common, ordinary gangsters, working under orders issued by some common underworld boss. We are inclined to believe that there will be some surprises when the real facts are known and when the dirty skunks are compelled to stand before the bar of justice with the masks stripped from their engaging masks.

The Post-Democrat does not intend to be throttled by fear of personal violence. It will continue to tell the truth about the activities of crooked politicians and their lawless understrappers, in spite of the terror program which seems to have been inaugurated in Muncie.

Citizens who believe in law and order, and who do not want to see the city turned over to scoundrelly Apaches with masks over their faces and murder in their hearts, should stand behind the Post-Democrat in its efforts to promote decent government and to expose crooked politics.

LEGION FOR PEACE, SAYS VETERAN HEAD

Hopes to Bring All Nations Together in Lasting Friendship

An Appreciation of Marshall Foch
Voiced in Message to All American People

By Hanford MacNider

Editors Note—Hanford MacNider, head of the American Legion, while voicing an appreciation of our late distinguished visitor, Marshall Foch, also gives an outline of what the American Legion hopes for the future and most significant is the strong note expressing hope for an eternal peace, a hope by the men who above all others have the right and the knowledge to speak.

"It is not things I want to see, it is the men, women and children, especially the children for there lies the future of America." This statement characterized the Marshal's visit to America, where he came to pay his respects to the men who served under him and to the great American nation in which is mixed the blood of every country in the world. He wanted to see the American people in times of peace and as a great soldier who hates war to promote a real and just peace which will make future wars impossible. The great Marshal represents to us not only his own country, but every allied country whose armies fought under his command.

It was France, Great Britain, Belgium, Italy and our Allies who, fighting for their very existence held back the enemy while we, unprepared, stood to build our armies that we too might do our duty to civilization, and they are grateful and they do not forget that we did add the men and ships and material which inspired by the leadership of the great Marshal made victory possible.

The very presence of this man who commanded the greatest armies in history, those of our own men among them, did more to inspire the American people and to bind together the great friendship of the Allies than could have been accomplished by any international agreements.

To Him—Our Love
To every American who served under his command, to every American who saw and heard him or even read his messages to our people has come

the realization of the high integrity and fine, simple greatness of the man. To him went at once our love and a silent pledge to do our part to carry out his deepest desire—a just peace and a safe peace for all the world. Legion are proud and happy that we

His comrades of the American could bring him to our people, that this great nation could learn to know him as we do; to appreciate him and to appreciate our allies who still sore and bleeding from their defeat of the civilized world, are proving that their spirit is indomitable.

The American Legion is pledged to carry on the battles for the principles for which our buddies died. We feel that this would be their wish, and we shall not forget.

A Force For Good

Composed of men and women who know what war means and not as pacifists, but with open eyes and hard earned experience, we intend to do everything within our power to cement together the great allies who fought that war might not come again. There is no surer guarantee to the peoples of the world that our victory may indeed be victorious and bring security to those who come after us. Every man and woman in the American Legion has no other desire than to build our organization into such a wonderful force for good and tie it so strongly into our national existence that it can accomplish these things.

The strength of the Legion is in the individual post and the men who compose it. It is to do them honor that this great leader of men came to their communities. It has naturally been our duty in fighting the battles for the disabled veteran and for all the ex-service men and women to ask things of the American people. We have now brought them something that we hope and believe will be of the greatest inspiration toward their future welfare.

The simple, wonderful character of this man whom we brought to you we believe has impressed itself upon America. He has looked into the faces of our people and found them good, and he has taken back the message he read there that the allies of yesterday are the allies of to-day and that they shall be the allies of tomorrow.

WEST VIRGINIANS PLAN TO OPERATE SOFT COAL MINES

Head of Logan County Association Says He Anticipates No Trouble

Huntington, W. Va., March 28—Walter Thurmond, president of the Logan Coal association, while here last Sunday, declared there is not the slightest feeling of alarm in anticipation of labor troubles in the mines of Logan county on account of the "strike call" issued by the United Mine Workers of America.

"The whole action and purpose of the International Union is directed against the progress and prosperity of the coal industry in West Virginia," said Thurmond.

The six-hour day and five-day week is one of the schemes aimed at West Virginia. The purpose is to lessen the output of our mines so there may be more work in the mines of the Central Competitive fields."

YUKON TERRITORY MINERS DISCOVER RICH SILVER ORE

Engineer Declares Pay Dirt Runs as High as \$200 to Cubic Yard

Dawson, Yukon Territory, March 30—It is reported that rich new silver strikes have been made in Keno Hill. Recent arrivals from the district report high-grade veins having been opened on the Croesus, Crystal Gulch, Gambler Gulch, Slate Creek and Stone claims.

It is expected that the population of Mayo Camp, which has already nearly half the population of the Yukon Territory, will be doubled this summer.

The White Pass company is starting construction of a new steamer at Mayo, to help handle the ore and other business for the camp.

BARNYARD GOLF HAS MILLION DEVOTEES

The Horseshoe World, a monthly publication for horseshoe pitchers, estimated that there are now one million pitchers in the United States and that before the year is over, the number would be doubled. Women's clubs are to be formed in all parts of the country, it is announced, and the "barnyard golf" game is scheduled to become one of the leading sports of America.

SHE'S PROLIFIC COW

Regina, Sask., March 30—A purebred Jersey, owned by Hollis Williams, a farmer at Estlin, Sask., has given birth to five calves, all normal, weighing about thirty pounds each. This same cow last year gave birth to three normal calves.

Obeded Kilgore, Disorganizer, Named by Few Men as Head of Democratic Committee

HOW FAST IS A BLOW

London—Moving picture machines recorded the blow by Georges Carpentier which knocked out Pugilist Cook as traveling at the rate of a mile a minute. Scientists dispute this, saying that 1,320 feet per minute is unusual.

CHATTY WOMAN JUROR

Exeter, Eng.—Ignorant of her duties, Mrs. Lawrence Hulme, a woman juror, chatted during court recess with one of the parties in a case she was hearing. She was reprimanded and sent home.

UNIQUE MARRIAGE CASE

London—Eighteen years after his wedding Maurice Ashby, a wealthy mill owner, sued his wife for nullification, alleging the marriage had never been consummated. The case was decided against him.

America Sends

Second Note on Rhineland Claims

Allied Governments Are Told That It Is of No Concern How Books Are Kept

Washington, March 30—The American government moved swiftly to prevent the validity of its claim for \$241,070,000, due for keeping the American expeditionary forces on the Rhine from becoming involved in the intricacies of allied bookkeeping.

There was handed to the foreign offices of each of the allied powers abroad a second American note bearing on the subject of reimbursement. It stated, in effect, that it is of no concern to this government how the books are manipulated to show who has been paid in full and who has not, but the validity of the American claim remains unaffected by any agreement which the allies may make between themselves on the side.

The second or supplementary note was made necessary by an agreement between the allied powers concerning French payments, which officials of this government feared might lead to questioning the accuracy of the original note. The first American communication stated that France had been paid in full up to May, 1921, for keeping the French occupational troops on the Rhine, whereas the American government has never received any reimbursement.

After the dispatch of the American communication the state department learned that the British and French had got together and decided to credit the transfer to France of the Saar coal and iron mines to the 1922 books, instead of those of 1921. The transaction was merely one of bookkeeping, as the French have had control of the mines since the war.

Foreseeing that the allied reply might point out this seeming inaccuracy in the American note and raise the argument that the records show that none of the allies had received full payment for their occupational expenses, the state department deemed it expedient to right the matter before the allies send their reply.

It is extremely important that committee men be elected in the coming primary who will keep the organization out of the hands of those who have been trying for the past four years to wreck the party and make it merely an adjunct to the Billy Williams republican machine organization. It seems ridiculous that even a small section of the county committee would think for a minute of placing Obed Kilgore at the head of the organization, even temporarily. The rank and file of the party do not want him at the head of the organization. He has failed miserably every time he has tried it and he will fail again.

The democrats of Delaware County have a good chance to win if they go at it in a sensible manner, but unless they kick the disorganizers out, and let them join the republican party, where they belong, defeat is as certain as death or taxes.

IT'S A BATTLE ROYAL

The New and Beveridge fight in Delaware County is going to be one of the liveliest local contests ever witnessed here.

The Beveridge people have headquarters at the Kirby Hotel, with Councilman Roy Friedley in charge. The New headquarters is located in rooms over Manok's shoe store on East Main Street.

Billy Williams was first chosen as the New leader, but owing to the rather unpleasant notoriety which fell to the lot of Williams as a result of a report made by the state board of accounts concerning the manner in which he had been blowing in money at he county infirmary, he was side tracked and Charles Van Matre took command.

This was decided upon at a meeting held in the Roberts Hotel some time ago, which was attended, it is said, by Harry Long, Billy Williams, Van Matre, Philip McAbee and other New men. At this meeting the choice lay between Van Matre and McAbee, it is said, but Van Matre was finally chosen.

The big outstanding feature of the contest is the tremendous bid that is being made by the New crowd for the votes of the law breaking element of the city. Men who were always known as gamblers and bootleggers are working openly for New and in some way the word has been passed around that Muncie will be wide open if the machine slate goes through.

The funny thing about it is that many respectable republicans are working hand in hand with Billy Williams and his cohorts. But you never can tell.

TRANSPORTATION AND ITS PROBLEM

Minnesota Governor Finds Answer
in Waterways and Motor Truck
to Railway Question

Points Out Economic Loss to World
in Failure of Roads to Move
Crops When Ripe

BY J. A. O. PREUS, GOVERNOR
OF MINNESOTA

Editor's Note:—J. A. O. Preus, is governor of a great state whose wealth has long been dependent upon its transportation facilities. Its greatest products were wheat and wood and the former is still its most valuable output. Transportation, swift and sure, has always been a dominant need in the state and its leading citizens in all walks of life have devoted much thought to the problem. Governor Preus is no exception as the following shows.

The transportation problem has become the most important one before the American people. Previous to the nineteenth century, people go along without any general transportation systems. They lived where they could get fuel, food and building material at close range. Clothing was mostly homespun. Commerce, such as existed, by ship or caravan, was largely in luxuries. There was no general exchange of everyday necessities such as exists today.

Under such circumstances a region which was rich in some special resources but which lacked in others, could never hope for rapid development. The fertile plains of the central states could produce food to support millions of people, but those people could not reach the degree of comfort and culture which they enjoy today without railroads to bring in an abundance of fuel, lumber, machinery and other necessities.

In like manner the coal regions of Pennsylvania, the cotton fields of the South, the Lake Superior iron districts, the orchard valleys of California, the copper country of Montana, and dozens of other regions would be limited to a small fraction of their present output.

The greatest era of railroad development came during the twenty-five year period following the Civil War when a network of lines was built all over the continent. Railroad managers were criticized and ridiculed for building through thousands of miles of wilderness. But the rails turned wilderness into civilization. Soon business developed which taxed the capacity of the railroads. Railroad building slowed down, but business kept on growing. During the last decade or two we have seen all too frequently crops going to waste and business of all kinds hampered because railroads were unable to supply cars or move material expeditiously.

A group of sixteen central and western states, of which Minnesota is one, supplies 75 per cent of the wheat, 65 per cent of the corn, 100 per cent of the flax, 85 per cent of the iron ore, 74 per cent of the zinc, and more than half of the beef, pork, butter, cheese, eggs potatoes and beet sugar produced in the United States. The question now is: Shall we increase our production of these things, as the demand increases, and exchange them for things which can be produced more easily and profitably elsewhere? Or shall we slow up and begin producing articles which we now import? We cannot do the latter if it becomes necessary, but we prefer to do the former if we may. Our future course depends upon our transportation facilities.

The Rail Problem
It has been estimated that \$4,000,000,000 would be needed to supply the tracks, terminals and rolling stock which would enable the railroads to handle expeditiously the amount of traffic such as they had to handle in 1917 to 1919. Before investors will contribute money to railroad building, it will be necessary to increase the earnings of the railroads. But there is a point beyond which freight and passenger rates cannot be increased without destroying the business. That has become quite plain during the last year and a quarter.

What then must we do? We cannot get along without the railroads. We must see that their earnings are sufficient to enable them to maintain a high standard of efficiency, but we

must develop supplemental transportation systems if we want to continue our agricultural and commercial development. This must come along two lines: Better highways and greater use of automobiles and trucks for short hauls and greater use of waterways for long hauls and bulky articles.

Most of the states have made a start along the right lines in highway building, and if they continue according to present programs we will in a few years have an excellent system of highways. The use of automobiles for passenger traffic long ago reached a point where it seriously cut into the railroad passenger traffic. We may, however, look for a much greater use of trucks for short hauls. Much of their business is "new business" but they will also take away from the railroads much of the short haul traffic which has never been very profitable to the roads but which has had much to do with congestion in terminals.

Our Waterways

In the use of waterways we have gone backward rather than forward. This is partly because our railroads have been so efficient. No other country in the world has railroads which can be compared with ours. Nor is there any civilized, commercial nation making use of waterways as we do. True, Europe's contour has given her better access to the ocean than we have, but she has also gone much farther than we in developing streams and canals.

We have wasted hundreds of millions of dollars on our inland waterways. No one in particular is to blame. The main reason is that we have gone on without any definite plan, or where there was a plan, it was carried out, if at all, only piecemeal.

In the case of the Panama canal, however, our government had a definite, complete plan, and went in and finished the job in a business-like way. The whole country has benefited and no one questions the wisdom of the expenditure. The states on the coast, east, south and west, however, are receiving the greater benefits and states in the north central group, like Minnesota, get comparatively little benefit from the canal.

True, we have the Great Lakes, but they are not open to the sea. When we start a cargo from Duluth to Europe, we must pay for a portage across New York state which costs as much or more than the combined cost of water transportation down the lakes and across the Atlantic.

Here is a Remedy

To remedy this, it is now proposed that the United States join with Canada in opening up the St. Lawrence river. The U. S. Army engineers have reported that for about \$270,000,000 locks and dams can be built which will permit all ocean going vessels except the largest leviathans to come up to our lake ports. Canada offers to pay half the cost, making the cost to us a little more than one-fourth of what we spent on the Panama canal. The army engineers believe that the horse power developed at the dams to be built will not only take care of the cost of operation but will in time pay for the entire cost of construction. These power benefits Canada offers to share with us.

The states which will benefit most are those which receive the lesser benefits from the Panama canal. That would make things fair all around. We believe, however, that the entire country will benefit, except the private interests which now profit from the transfer of freight across New York. The Soo Canal has a tonnage of seventy to ninety millions a year, while the Panama canal exceeded 10,000,000 for the first time in 1920. With the way open to the sea, traffic on the Great Lakes will be doubled or tripled. We cannot doubt that this great agricultural and industrial region, which includes America's second largest cities, will send down through the St. Lawrence a tonnage much greater than Panama's. These states are entitled to a route direct to the ocean.

There are several other waterway projects which are worthy of consideration. Each should be investigated. Wherever it can be shown that benefits exceed the cost, the work should be expedited. Expenditures for piecemeal and haphazard waterway improvements should be stopped.

ALASKA LITTLE KNOWN TO NATION

Governor of Furthest North Points
Bright Future When Resources
Become Better Known

Says Present System of Government
is Harming Prospects and Holding
Territory Back

BY SCOTT C. BONE, GOVERNOR
OF ALASKA

Editor's Note: Scott C. Bone, governor of Alaska, loves his northern home with a great passion. He believes in it and, what is more to the point for the reader, he knows it. In the following he tells of many things in connection with his homeland that are unknown to the average man and also gives voice to hopes that may mean great things not only for Alaska but for the entire nation as well.

Comparatively few people know Alaska. Fewer still comprehend it in all its greatness.

Alaskans themselves, in major number, have seen little of Alaska. Eight out of ten of them have glimpsed only small sections of the

Territory. The average citizen of the populous communities along the coast thinks of Alaska in terms of Ketchikan, Juneau, Cordova, Valdez and Seward. To him—this average Alaska citizen—Alaska as a whole is almost as unknown as it is to the average citizen of the outside world.

The tourist who visits these shores is overwhelmed by the scenic beauties presented to the eye on every side, from Dixon's Entrance through the panoramic Inside Passage to Skagway at the head of Lynn Canal and, perchance, on over the White Pass, in the Yukon Territory, to Whitehorse. But, if his journey ends there, he does not know Alaska. He has seen only the beginning of Alaska.

Of Great Magnitude

The magnitude of Alaska—900,000 square miles, or nearly one-fifth the dimensions of the American Union—precludes in the unopened stage of the Territory the possibility of a general and intimate knowledge of Alaska.

Illustrative of the prevailing mis-

information is the instance of the fine young soldier, who, returning from overseas, visited a school friend in Boston and, at a social gathering, was pointed out as hailing from Alaska. "Does he speak English?" asked Miss Highbrow, adjusting her glasses and inspecting him interestedly.

Vilhjalmur Stefansson, college-bred, is an illuminating discussion of "The North That Never Was" gives approval to the idea of a Cambridge preacher that the country needs a National University of Polite Unlearning. Stefansson himself would fit into the Alaskan chair of the institution. Or, equally so, Dr. Alfred Brooks, the eminent geologist, or Major J. C. Gotsdalk, practical road builder, who has mapped the Territory and knows it from A to Z.

So profound a statesman as Daniel Webster, who visioned America's future greatness, could see nothing worthy of consideration west of the Rocky Mountains. Therefore, we may be patient with a Twentieth Century denseness that still ignorantly visualizes Alaska as a country of ice and snow, its mountains and hills laden with precious metals and its glacial scenery unsurpassed, but really fitted for habitation only by polar bears.

Those Misconceptions
Something more potential with the masses than a National University of Polite Unlearning is required to correct and dispel these ridiculous popular misconceptions about Alaska and force upon the public mind a fair and accurate knowledge of this great Northland.

Alaska is not a monumental iceberg or glacier. It is not snowbound and in the grip of bitter, biting elements. It is not a land of ice and snow, save those in the region of the Arctic Circle, are open the year around. Its temperature in the interior, in mid-winter, is no more severe than in the Northern and far coast is generally mild and equable. Western States. Its climate on the whole is much more favorable than the climate of the United States. Blizzards such as rage in Minnesota, the Dakotas and Montana and occasionally in New York and the East, are sometimes experienced in the northernmost part of the Territory, but are uncommon, if not unknown, to coastal Alaska and Alaska as a whole.

Millions of people live happily and thrive in Norway and Sweden and in sections of our own country under climatic conditions no more favorable, if not more severe, than the general climatic conditions of Alaska. Alaska's summers are ideally pleasant and delightful on the coast and gloriously bright and beautiful, and often hot, in the interior. Temperature ranging from 80 to 90 degrees is frequently encountered in the Arctic Circle. Throughout the territory flowers and berries grow in profusion. Long days and warm sunshine give sturdy growth to plant life. Fairbanks is a veritable floral bower in June, July and August. The midnight sun on the Yukon is worth traveling thousands of miles to see, especially when it illuminates Mt. McKinley, the towering peak of the American continent.

Has Farming Lands

Alaska possesses 100,000 square miles of agricultural lands and today numbers hundreds of occupied homesteads under successful cultivation. Farm products of the estimated value of \$250,000 were grown and sold in the Tanana Valley alone the past season. Year after year there is increasing cultivation.

How are these and kindred truths about Alaska to be firmly planted in the popular mind and the untruths and the half-truths forever eradicated?

How is the real Alaska to be removed from the realm of fancy and established upon a fixed foundation of fact? By opening Alaska to settlement; by inviting capital and people to come and make it easy for them to gain a foothold; by unlocking its resources and freeing the Territory from red tape rule; by unreserving millions of acres of lands senselessly reserved; by silencing and shunting aside the visionaries and theorists who succeeded in bottling up Alaska and whose ideas have been expensively and actively found wanting; by proceeding with the development of Alaska as a big business proposition; by dismissing the foolish, demagogical fear that any so-called predatory interest ever can or ever will gobble up so huge a land as Alaska or a material section thereof; and finally, by terdly realizing that Alaska, unfettered and given an honest chance will populate itself and go ahead and wax opulent and develop grandly and luxuriously, just as the Western domain of the Union, in spite of Daniel Webster's obscure vision and dark foreboding, progressed and prospered and grew into States and added bright stars to Old Glory.

Then, and not until then, will Alaska become known to the world, and the truths about Alaska prevail undisputed and endure for all time. As a first step toward all this Uncle Sam has just completed the construction of a cable from the coast line into the interior, from Seward to Fairbanks, at a cost of fifty odd millions, and he has been spending additional millions in the building of roads and trails. This means the opening up of Alaska—that it is no longer to be hermetically sealed. Moreover, Uncle Sam is proposing, through Congress, to substitute a workable system of administration in Alaska for the cumbersome, unworkable, halting, inefficient and utterly impossible system of bureaucratic government.

Small Wonder!

"I trust, sir, that you have not been indiscreet enough to speak to my daughter about marriage," said the stern parent to the youth who had just asked for his daughter's hand. "I have not, sir," replied the youth, "but I was strongly tempted to do so last evening when she kissed me good night."

Alaska lies beyond the vision of the average citizen of the United States. The magnitude of Alaska—900,000 square miles, or nearly one-fifth the dimensions of the American Union—precludes in the unopened stage of the Territory the possibility of a general and intimate knowledge of Alaska.

Expert Discusses Lawn Improvement

Soils Specialist Explains How To Establish Sod of Desirable Grasses

Almost every home has a lawn receiving some degree of attention and possessing of certain qualities which make its care worth while. Few lawns are developed to their full possibilities. Some get almost no systematic care and some receive considerable well meant but misdirected effort. The development of good turf is a fine art in itself and usually requires years for its realization. Different grasses show considerable variation in the conditions necessary for optimum development. For this reason any given set of conditions if consistently maintained is likely to favor some few species which eventually predominate. In like manner the seed mixture has in large part only a passing influence upon the character of the ultimate turf.

Every Soil Will Grow a Lawn
Every plant is a master of the conditions under which it grows and in a corresponding way the vegetation on any lawn may be regarded as a response to the particular combination of growth factors, both natural and artificial, which the plants find. Natural vegetation is commonly a complex vegetation. Different grasses show considerable variation in the conditions necessary for optimum development. For this reason any given set of conditions if consistently maintained is likely to favor some few species which eventually predominate. In like manner the seed mixture has in large part only a passing influence upon the character of the ultimate turf.

Strange that it may seem, any soil, however unproductive or unfit, can be remade in such a way as to grow a satisfactory sod of some desirable grass or grasses, the conditions determining in considerable degree the whether or not lime is needed. The surface soil of the lawn consists almost entirely of subsoil excavated from the cellar. In this case it becomes necessary to provide at least a part of the vegetable matter which would normally be present under more natural conditions.

Limestone Helps the Bluegrass
Throughout Ohio and neighboring states Kentucky bluegrass is the predominant grass of practically every lawn. Whether or not it is included in the seed mixture it eventually comes in naturally unless prevented by some unfavorable condition of the soil or by special attention to other desired lawn plants. In central Kentucky and portions of Virginia, West Virginia, and Tennessee where bluegrass reaches its highest development, it grows essentially on limestone soils. In Ohio, particularly in the eastern half, many lawns with only a scattered covering of bluegrass would be very materially improved by an application of 200 pounds of finely ground limestone (carbonate), 150 pounds of hydrated lime (hydrate), or 100 pounds of quicklime (oxide) for each 1000 square feet of surface.

A simple litmus paper test that may be made by any one will determine whether or not lime is needed. Five cents worth of blue litmus paper obtainable from any drug store will serve for a dozen tests. After a rain or when the soil is wet press a strip of the litmus paper against a bit of moist earth and allow it to remain for several minutes. If the blue color of the paper turns pink one need not hesitate to use lime.

Phosphates Bring in Clover
White clover and bluegrass are all but inseparable companions, conditions favorable to one are favorable to the other. Virtually all the soils and crops of this region respond well to applications of phosphorus. Lawn soils and grasses are no exception to the general rule. Coupled with this is the added fact that all clovers are relatively heavy feeders on soil phosphates. Once every 3 or 4 years an application of 20 pounds of acid phosphate or basic slag, or half as much bone meal, for each 1000 square feet of area will greatly encourage the grasses and particularly white clover.

Two Blades Instead of One
For most owners the problem of turf improvement resolves itself into one of thickening a light and already established sod, eliminating weeds, and covering bare spots. Partial stony or rocky lawns may be caused by thickening without reseeding by topdressing with lime, phosphorus, manure, or nitrogenous fertilizers. Under these conditions the materials are applied loosely on the surface and permitted to wash into the soil by rains or sprinkling. Where the ground is most or evenly level, it is desirable to rake or harrow the materials into the soil and reseed. Where weeds comprise most of the vegetation, their prevalence may be accepted as evidence of one of two conditions: (1) the grasses have not had opportunity to secure a foothold because of a lack of seed or because of unfavorable competition; or (2) they have been held back by certain soil conditions.

In most instances the cause is neither difficult to discover nor impossible to remedy, if one is willing to give time and effort to a study of the conditions and their correction. Perennial weeds such as broad-leaved plantain, buckhorn or English plantain, and dandelion are among the worst offenders. During July and August plantain is much more easily removed by pulling than earlier in the season. This is perhaps the most satisfactory method of elimination from small areas. With dandelions frequent deep cutting with a spade or knife will prove most effective. For larger areas spraying with an iron sulfate solution (2 pounds per gallon of water) has given good results and is much less laborious.

In connection with any program for weed control it will be found helpful to fertilize and reseed spots made bare by the removal of weeds. With badly infested lawns it may be best to start over again with a combination of seed and soil conditions as will give the desired

plants every chance firmly to establish themselves ahead of invasion by weeds. At no time should the latter be permitted to seed if their control is to be maintained. Little matters such as frequent and close clipping, watering during hot, dry weather and following summer or fall seeding, a handful of seed here and another of fertilizer there will often do much in the establishment of a uniform turf comparatively free from undesirable plants.

A Seasonal Topic

All the common grasses respond quickly to the use of nitrogenous fertilizers in available form. If for any reason it is desired to suppress the growth of clovers and increase the proportion of grasses in a mixed turf, this end may be readily accomplished by the use of soluble nitrogenous materials such as nitrate of soda or sulfate of ammonia. Five pounds of the nitrate or four pounds of the sulfate for each 1000 square feet of surface, applied as a top dressing in early spring and again in mid summer and repeated from year to year will result in a uniform bluegrass sod of vigorous growth. Where sulfate of ammonia is employed in large or long continued amounts the acid residues resulting from its use should be corrected by occasional applications of limestone. If on the other hand, both grasses and clovers are to be encouraged the nitrogen carriers should be applied in connection with the phosphates previously mentioned. Well-rotted stable manure can be used with excellent results particularly on soils lacking in vegetable matter.

On sand and muck soils a further addition of 2 or 3 pounds of muriate or sulfate of potash to the fertilizer mixture will greatly assist the grasses and clover, especially the latter.

Crowding Out the Moss

Many city and some country lawns carry a considerable growth of mosses. The statement is sometimes made that mossy conditions can be corrected by the use of lime. This may or may not be true. It is a fact that some of our lawn and pasture soils become so acid that the desirable plants find it difficult to persist, whereupon the more tolerant mosses gradually come in to take their places. On the other hand some mosses prefer soils well supplied with carbonate of lime. A preponderance of mosses indicates a reduced competition by clovers and grasses and may be the result of moisture, drought, shade, or accumulation of soil acids in excessive degree. Attention to these four factors with the correction of the disturbing influences and a little seed and fertilizer will usually bring in the grasses and crowd out the moss.

Water the Great Vitalizer

Large quantities of water are necessary for high-quality sods. It has been estimated that a lawn 50 x 150 feet if well turfed would be capable of transpiring more than 250 gallons of water daily. In the country it is seldom feasible or possible to supply water to a lawn. In the city, however, every city home has a constant supply and thereby an excellent opportunity to develop a heavy turf. Removal of weeds during the summer months followed by watering gives the bluegrass and white clover a decided advantage. Where rainfall is the only source of water the supply can be retained somewhat by frequent mowing so that the clippings may be allowed to remain on the lawn thus forming more or less of a mulch as the season advances. At the same time their content of organic matter and plant food materials are returned to the soil. Manure, sand, and compost are the most satisfactory materials for softening and living a heavy clay inclined to dry out readily and bake hard at the surface.

Where Sour Soils Reach a Premium
Most of the common agricultural plants prefer a soil near the neutral point in reaction, i. e., neither very acid nor very alkaline. Hartwell and Damon in Rhode Island have pointed out that under certain conditions it may be advisable purposely to develop a considerable degree of acidity in question require an excessive degree of acidity but because they are much more able to withstand such conditions than less-desirable plants. The acid-tolerant grasses referred to are fescue, redtop, and Rhode Island bent. To quote directly from R. I. Bulletin 170: "Dandelions and plantains are often very troublesome weeds but apparently are checked by a degree of acidity which is not especially detrimental to the growth of bent and red fescue for example. It checks eventually the growth of these weeds it is only necessary to introduce sulfate of ammonia in the topdressing in place of nitrate of soda. This procedure will of course at the same time check the development of certain grasses like bluegrass and also of clover." It perhaps should be noted that the bent, fescues and redtop are somewhat better adapted to Rhode Island conditions than is Kentucky bluegrass, whereas in Ohio the reverse is true. Consequently it is doubtful if sour soils should be deliberately sought as a means of weed eradication in general lawn practice in this region. More can probably be accomplished by the systematic encouragement of bluegrass and white clover. On putting greens of golf courses and correspondingly high-culture areas of the finer grasses it is entirely possible that the establishment of acid conditions and continued avoidance of limestone or basic fertilizers will prove desirable. In any case continual vigilance and consistent treatment is the price of a really good turf and the possibilities are well worthy of the effort.

Tea Blended to Suit Water.

Whenever a large town in the British Isles changes its source of water supply, a sample is taken by the tea blenders, in order that the right blend of tea may be made to suit that particular water.

Keep Money at Home.

The new organization of women will endeavor to turn the public from wildcat investments, in which more than two and a half billion dollars were lost by Ohioans during the last three years. "We want to make the people realize that their hard-earned savings should be placed in local financial institutions, where their money will be kept in their home communities, and thus tend to create prosperity in their home sections."

Hard Luck Horn

London—Lord Dartmouth has sold the famous herald's trumpet which superstitious Yorkshire folk have blamed for the misfortunes of his family. It is 500 years old.

OHIO THIRD IN HOMES OWNED

Buckeyes Not as Domestic as
Either New Yorkers or People
of Pennsylvania.

WOMEN DEMAND A CHANGE

Form New Organization to Put Ohio
In First Place in Number of Homes
Owned—Declare Ohioans Waste
Too Much in Worthless Investments—Urge That Savings Be
Used in Building Up Their Home
Communities and Creating Prosperity For All.

Columbus, O. (Special).—Ohio women have set forth to make the Buckeye state the greatest home-owning state in the United States. Ohio now ranks third with New York second and Pennsylvania first. Every woman in the state should be interested in this movement, according to Mrs. L. M. Studevant, Sidney, newly elected president of the Woman's Auxiliary of the Ohio Building Association League, the organization under which the home-owning effort is to be made. Others officers include Miss Lydia Cellarius, Dayton, first vice president; Miss Lenore Kell, Steubenville, second vice president; Mrs. James A. Devine, Columbus, treasurer, and Miss Louise Johnson, Columbus, secretary. The new women's organization has enrolled members in every county in the state, all representative women who are more

or less interested in financial work. Efforts are being made to interest every one of the half million women in the state in home-owning. "It is not right that the home of presidents should not be the leading home-owning state in the United States," declared Mrs. Studevant. "Ohioans have the best manufacturing plants, the best farms, the best people of any state in the Union, and we should be the greatest home-owning state, and will be."

Own Only 50 Per Cent.

There are 1,414,068 homes in Ohio, of which number 673,858 are rented and the balance owned. Only a few more than 50 per cent are owned. "There is no reason why more Ohioans should not own their own homes," said Mrs. Studevant. "We have more than 700 building, loan and savings institutions in this state, whose business it is to loan money at low rates and for long terms for home building. Although the public is recognizing more and more the value to a community of these institutions, yet Ohio will not take its rightful place among the home owners of the country until more savers place their funds in these institutions."

According to Mrs. Studevant community leaders should recognize the fact that it is a community duty to urge the placing of savings in institutions which help to build towns. "Building, loan and savings institutions in Ohio are absolutely safeguarded by strict laws, by huge cash reserves and by assets of a half billion dollars. They pay a good rate of interest, in fact as much as is permissible with safety to the depositor, and they are operated economically, profit being of secondary consideration. They are real community benefactors, financing 90 per cent of all homes built, turning spenders into savers."

Keep Money at Home.

The new organization of women will endeavor to turn the public from wildcat investments, in which more than two and a half billion dollars were lost by Ohioans during the last three years. "We want to make the people realize that their hard-earned savings should be placed in local financial institutions, where their money will be kept in their home communities, and thus tend to create prosperity in their home sections."

Queen of the Island

Montevideo—There is only one woman on South Georgia Island, burial place of Sir Ernest Shackleton. She is the wife of one of the keepers of a whaling station.

SQUIRREL FOOD

I Don't
My parents forbade me to smoke;
I don't
Or listen to a naughty joke;
I don't
They make it clear I must not wink
At pretty girls, nor even think
About intoxicating drink;
I don't
To dance or flirt is very wrong—
I don't
Wild youths chase women, wine and
song—
I don't
I kiss no girls—not even one;
I do not know how it is done;
You wouldn't think I have much fun;
I don't

"I haven't any sympathy for the man who beats his wife," said a passenger in the smoker of the 5:15. "Well," said another, a timid, under-sized fellow, "a man who can beat up his wife doesn't need any sympathy."—The American Legion Weekly.

"I see it is claimed that contented cows give better milk."
"Yes, and happy hogs yield finer pork products. Everything is tending in that direction. It is only the consumer who is discontented."—Louisville Courier-Journal.

A New Yorker was spending a night at a "hotel" in a Southern town, and told the colored porter that he wanted to be called early. The porter replied: "Say, boss, I reckon yo' ain't familiar with these hark modern inventions. When yo' wants to be called in de mawnin', all yo' has to do is jest to press de button at de head of yo' bed. Den we comes up and calls yo'."

A young man called at the house of a celebrated diagnostician and asked to see the doctor.

"Have you an appointment?" the office nurse asked.

"No, I haven't," the young man replied.

The nurse consulted the doctor's appointment list.

"I think I can work you in after the next patient leaves," she said, "so please go inside that room and take your clothes off."

"Take my clothes off?" the young man exclaimed. "What for?"

"The doctor has made it an absolute rule not to see anybody unless that is done," the nurse said firmly.

"But I don't want to take my clothes off," the young man insisted.

"Then I'm sorry, but you can't see the doctor," the nurse said.

"Well, if that's the case, I'm game," the young man said.

A few moments later the doctor entered the room and found the young man awaiting him stark naked.

"Well, sir," the doctor said, "what seems to be your trouble?"

"Doctor," the young man replied, "I called to see if you would renew your wife's subscription to the Ladies' Home Journal."

There is one distinguishing mark between the stuff "Rip" drank and the stuff they are drinking now. That is, "Rip" woke up.

A little boy from Canada, who had never seen a negro, was riding in New York with his uncle when he spied a lady.

"Uncle, why does that woman black her face?"

"She doesn't; that's her natural color."

"Is she black like that all over?"

"Why, yes," uncle replied.

The boy looked up beamingly at his uncle. "Gee, uncle, you know everything, don't you?"

A tramp knocked at a kitchen door and said: "Please, kind lady, I'm a sick man. The doctor gimme this medicine, but I need something to take with it."

The lady was ready to help. "Poor fellow," she said, "do you want a spoon and a glass of water?"

The tramp answered: "No mum, I wouldn't trouble you, but this medicine haster be took after meals. Have you got a meal handy?"

The parish priest had dropped in to see one of his flock, and, to prove his kindly interest in the family and all its members, he began to ask one of the little colleens how she was progressing at school.

The usual questions as to the spelling of the interesting word "cat," and so forth, were put and answered. Then the priest turned to a more abstruse subject, geography.

"Now, tell me, dear, what is a lake," he asked.

The little maid puckered her brows in thought for a moment. Then she said:

"Plaze, yer rivirine, it's a kettle wid a hole in it."

"Senator Snortworthy," said that gentleman's private secretary, "one of your constituents says he wants to see you on a matter of life and death."

"I'm familiar with that type," said the senator, testily. "He probably means that if I don't lend him the money to pay his way back home he'll have to live and die in Washington."

Bishop X went traveling through the western part of Cuba and stopped overnight at a very small, rather uncomfortable inn. However, a very nice supper was spread for him with two roasted ducks.

Next morning, as he was ready to depart, he was surprised to see this item on his bill: "For two roasted ducks, \$20."

"My son," he said to the innkeeper, "you charge high for two ducks. Are they so scarce around here?"

"No, your grace," answered the keeper. "Ducks are not scarce here, but bishops are."

QUEEN OF THE ISLAND

THE MUNCIE POST-DEMOCRAT

A Democratic weekly newspaper representing the Democracy of Muncie, Delaware county and the Eight Congressional District. The only Democratic newspaper in Delaware County.

Entered as second class matter January 15, 1921, at the post-office at Muncie, Indiana, under the Act of March 3, 1879.

Subscription Price, \$2.00 a year in Advance
Office 315 North Mulberry Street. Telephone 2540
GEO. R. DALE, Owner and Publisher.

FRIDAY, MARCH 31, 1922.

THE MAN IN THE MASK

Thugs using masks, pistols, sand bags and high powered automobiles, hired by dirty, slimy cowards who would not risk their own precious hides in physical encounter, should be driven out of the city. The cheap crooks who sit behind the scenes and send out their tools to perform their dirty work, should be apprehended and brought to justice. If a reign of terrorism is starting in Muncie, all red blooded citizens should arm themselves and start a real shooting match. The coward who covers his mug with a black mask is too dirty to live. Law and order is trembling on the brink in Muncie. Unless the thugs who have begun to operate under cover of darkness are speedily brought to justice, the lives of citizens will not be safe. The present city administration is completely honeycombed and infested by a gang of spies who are not friendly with the administration. These double crossers, who profess to be friendly with Mayor Quick, and who are drawing money from the city which ought to be in the pay envelope of friends of the administration, should be kicked out without ceremony. Traitors in the camp offer great encouragement to the black mask brigade.

The Star quoted the editor of the Post-Democrat as saying that Marion "gangsters" had followed him around in that city in two automobiles and that Marion men were suspected of having perpetrated the Friday night holdup. The Star used considerable poetical license in making that statement. We were not followed around in Marion by automobiles nor was the holdup pulled off by Marion "gangsters." Muncie men wore the damnable black masks, and some profess to be friends. It will all come out in the wash.

ANNEXED TO BRITAIN

(Line 'o Type in Chicago Tribune)

Senator Borah has discovered the secret pact between the United States and Great Britain. But you don't know the half of it, dearie, you don't know the half. Gamaliel made a contract that was signed before a justice of the peace at Alexandria, just outside of Washington, that the militia of Ohio should go to India to quell the uprising natives. If there were no uprising Lloyd George said he would start one. The administration arranged to let the Japanese army land in San Francisco on condition that it would capture Bill Hart. The Japs said that was carrying secret agreements too far, but Gamaliel stood firm and said that if the Japs wouldn't capture Bill Hart and carry him off he would have the San Francisco police arrest the Japanese army the minute it landed. California is to be saved off from the rest of the union and towed over to Japan and Indiana and eastern Kentucky are to be annexed to the British Empire, but will be given home rule like Ireland.

RESULTS FAR REACHING

Prices paid for farm products have been moving gradually to higher levels in recent months. This has been a recovery at the point where the slump in prices had been most pronounced. The improvement has been orderly and in response to natural laws. As the price advance has increased the buying power on the farm, it has had a far-reaching effect on the general industrial situation. Recent reports of the Federal Department of Commerce reflect the improvement that has come and sound a more hopeful and inspiring note. There is a quickening of business, there is more of confidence in the business. Because the better prices were developed gradually they give promise of permanency and herald the advent of still better conditions.

Months ago business judgment was in agreement that general commodity prices must come down in a marked way to the low level reached by farm prices, or farm prices must be advanced. The prices were too far apart, so widely separated and out of harmony that business could not go ahead in a large way. Economists agreed farm prices were too low and that they should be advanced to a line in harmony with known conditions. Commodity prices in the country generally have shown some declines while farm products were advancing. It was a movement to a common meeting point where the solution of a big problem in industrial life would be reached. Because the movements have been normal there is promise of still better conditions that will bring more improvement to the business world. It is not a fevered or forced improvement, nor has it been rapid in development. There has been no reason for sharp and severe changes in prices. Business is improving in a gradual way and conditions will be bettered in the same way. A gradual improvement is best for all interests. There is much of unemployment still to be found, but almost daily there are reports of mills and shops being reopened, or more men being put to work. The freedom from feverish conditions makes the movement more encouraging and makes the hopeful note sounded more welcome.—Ohio State Journal.

GERMANY'S AMBASSADOR

The German government has appointed as ambassador to America Dr. Otto Ludwig Wiedfeldt and his arrival in the country will mark the final chapter in resumption of relationship between the countries. The appointment is one of highest importance, for Dr. Wiedfeldt is the first to represent the German republic here. His task is no small one, but the position he has held in Germany marks him as a man of unusual ability. He is not only a man of great wealth, but ranks high in the industrial world, has been managing director of the great Krupp organization and last but not least is a great diplomat. The appointment of such a man, shows the great importance in which the position is held by the German government.

THINGS TO THINK ABOUT

Worldly goods obtained by trickery are seldom kept, their loss is two-fold.

The unselfish prosper, not fast, but substantially. The selfish will flourish for a time—great is their fall.

Greed for the dollar is a bad creed; remember, your fellow-man is human.

We spend one-third of our lives at our business. It's the personal interest you put in your business that makes business worth while.

It's the way you live that makes life worth living.

AEROPLANE SEA RESCUE

Genoa—Seizing a rope from an aeroplane which swooped down close to him after his boat capsized, a fisherman was dragged seven miles through the water near Antibes and finally reached shore.

ACROBATIC ESCAPE

Rome—Colliding with a horse as he made a sharp turn in the road, Capt. Cantoni leaped from his motorcycle to the back of the animal and escaped injury.

LITTLE BARONESS DIES SLIDING DOWN BANISTER

Berlin—Six-year-old Baroness Bertha von Grimm disobeyed the order of her governess to stop sliding down the banister in the baronial palace at Bitterfeld. As the child was going down a second time she lost her hold and fell twenty feet on her head. Her neck was broken.

ADDED INSULT

Dover, Eng.—German dolls being sold here wear clothing embroidered with designs of Zeppelin airships.

TIMELY Rhymes
By Raymond Slupe

"BONUS NOISE"

Tell me, what is all this noise—
'Bout a bonus for the boys?
I've got Soldier Bonus Blues,
Readin' Legislator's views!

Did you ever stop to think?
They'd raise money quick as wink
To elect a fellow of theirs
To the swell upholstered chairs.

Sure they would, and millions too,
Now they whine and fret and stew,
And say the Treasury lacks the cash.
Think we guys believe such trash?

You can think just what you wish
We are not a school of fish.
Cut the comedy, we say,
Give the boys the cash to-day.

ONE ACRE OATS
ONE DAY'S PAY

Because These Two Are Equal in Value Hard Times Are Upon Us, Says Educator.

Head of University of Illinois Gives Some Startling Facts for Your Consideration.

BY EUGENE DAVENPORT

Editor's Note—Eugene Davenport, dean of the College of Agriculture of the University of Illinois, believes every word that he has written to be the exact truth. He is in close touch with agriculture conditions throughout the United States. He is also a man thoroughly familiar with the laws of domestic economy. His conclusions may not agree with what you believe but to many they will be a revelation.

A great gulf has formed between the country and the town due to the fact that the price for farm products has dropped to the neighborhood of pre-war values while the prices of manufactured products, which the farmer normally will buy, have remained at war time levels or but slightly below.

The farmer has no means of increasing the prices of his output for it depends entirely upon the principle of supply and demand and the ability of his purchasers to pay. He has always depended upon Europe to handle the surplus, and the buying power of that people is growing gradually less month by month. In our own country, the unemployment of millions in anything like productive enterprise, and the double manning of many essential industries, such as mining has forced the cost of production of non-agricultural goods entirely out of the farmer's reach.

While the farmer is entirely dependent for prices upon the law of supply and demand and the ability of his buyers to pay, organized labor has claimed that it would surrender none of the advantages that it has gained during the war, and it is leaving no stone unturned to maintain the same price levels as heretofore, the argument being that the cost of living has not decreased. This argument ignores the fact that a very large element in the cost of production is the double manning of industries, as in mining and the very low efficiency in production, as in building; both of which overload production with unnecessary costs, even to such extent that the laborer cannot himself buy his own product.

The "Buyers' Strike." Conditions have become such that it now requires an acre of oats or a half acre of corn to pay one day's labor of the mechanic. This being the case, the farmer cannot build buildings, or buy machinery or any other manufactured product not forced upon him by absolute necessity. Shoes are costing almost as much as in the war months, even though a dead animal is no longer worth skinning. When this discrepancy became acute, the farmer was forced out of retail trade. What

happened was called a buyers' strike. It was not a buyers' strike, it was the practical exclusion of that third of our people who live by the land, and a good buying third it has always been. That third is now practically out of the markets and the amount of unemployed just about corresponds to what would be needed to supply the farmer's trade if they could afford to buy.

Viewed from another angle, it requires in normal times about one laborer to provide the goods which a farmer will consume. When the farmer is driven out of the markets, of course the laborer which ordinarily supplies him is thrown out of employment, and that is what has now happened.

It is rather marked coincidence that the number of men supposed to be out of employment is almost exactly the number of farmers on American farms.

Is This a Remedy?

There can be nothing like general prosperity until this gulf between the country and the town is either filled up or bridged over. The farmer is powerless because he has no means of increasing the price of his own product. The city must do it by foregoing undue speculations, by accepting a reasonable wage, by being willing to work every day for a reasonable length of time, as the farmer does, and by turning out a full day's work for a full day's pay.

No other policy will bridge this gulf. No other policy will produce manufactured goods at a price which anybody but a rich man can afford to pay. When labor is engaged at the production of necessities at a cost which most men cannot meet, then something is wrong with our economic production, and that is the case now.

The farmer can get along without the city, but the city cannot get along without the farmer, and the country as a whole cannot prosper until the city and the country work together. The key to the solution of this impossible situation is a better day's work on the part of people generally engaged in the productive industries and a reversal of the policy to extort as large a wage as possible for nominal time producing as little as possible during that time in order that the work may go around.

The country has ignored this situation long enough. The time has come when the situation must be squarely faced and squarely met. Both production and transportation are now practically under the control of organized labor, which is being badly led and by the same class of people which has attempted, though unsuccessfully, to gain control of farmers.

As the matter stands today, farmers are going ahead producing for the world's open markets; and until labor and capital are willing to do the same, this gulf between the country and the town will continue and will grow deeper and wider.

"Near to Every" Ghost is
Becoming Active Again

Maybe It's Just Because of Jealousy! Over Doings in Nova Scotia; Ohio Spook Over 50 Years Old

Milan, O., March 30—Has the notoriety that the spook of the "haunted house" of Caledonia Mills, Nova Scotia, has been getting of late aroused jealousy on the part of the ghostly kin that—according to the talk of many years—has inhabited the "haunted house" a few miles northwest of Milan, near Avey?

But whether it has or has not the spook of the haunted house of this locality kept to itself until very recently, when, all of a sudden, it shocked the dwellers of its vicinity with manifestations as of old.

One night between 12 and 1 o'clock weird shrieks emanated from the old house and blue lights danced up and down before the long, panesless windows, it is said.

The ghost of the near-to-Avey "haunted house" has been supreme in its field for more than fifty years. No one seems to know where it got its association with the place or how long it has been there.

Old-timers tell you that the house was "haunted when I was a kid" and that they "always steered clear of it."

"I've never believed much in spooks

but still I've never felt called upon to investigate," said Win Bartow, who by reason of the fact that he is pretty well informed in matters generally and used to write the news of Milan and surroundings for the city newspapers, is looked upon more or less as a highbrow.

The near-to-Avey "haunted house" is a big 2-1/2-story brick structure that stands on the east of a hill and was the abode of a farmer and his family until, in some long gone day—or night—the spook took possession, forcing them to flee.

Every now and then some daring individual, attracted by the beautiful surroundings with the premises enhanced, has made up his mind to "brave the spooks" and has moved into the house only to move out again, very often after attempting to spend a night there.

The last person to live in the "haunted house" in apparent content was an old woman by the name of Root, who died there many years ago, according to the story told here. For years—until very recently—the ghost of the near-to-Avey "haunted house" was quiet. Then, all of a sudden, it became active again.

And so the folks are saying: "It's probably jealous of the Nova Scotia ghost!"

POSTPONE START OF MARKET RADIO WORK

State Engineers Continue Experiments and Await Conference Results

Radio broadcasting of state department of market reports from the Ohio State University will not begin April 1, the date first set.

University officials are unable now to say when the service will start, but believe it will be soon. They think it best to await final rulings of the Hoover radio conference recently called at Washington to prepare a code of control for voices in the air.

Wave-lengths to which the new service will be tuned and such questions as the type of license which the sending station must take may be determined by the report of the radio conference, it is stated.

Electrical engineers of the university are buying the sending apparatus in parts and assembling it experimentally so as to get the most effective transmission. Professor Roy A. Brown, in charge of this work, says it progresses satisfactorily and that the proposed noon and mid-afternoon reports, when finally put into the air, should easily reach every point in Ohio.

The plan is to install receiving sets at county agents' offices, located in the county seats of 85 of the 88 counties, and to relay the information from there to the farms by means of old-time wire telephones.

ACCOUNT KEEPING IS NECESSARY TO FARMER

Some Sort of Books Should Be Kept as in Any Other Business

The income tax law made a good many farmers keep books and most of those who thus learned to keep books are glad this law was passed. There really isn't any use of trying to farm without a set of accounts, even though they are reduced to their simplest forms.

Accounts with each enterprise on the farm are hard to keep and not very valuable after they are done nor are they necessary to tell which part of the business is slipping.

The fellow who has some sort of accounts eliminates profitless work just about as soon as he discovers he is losing, and he keeps records at once his compass and speedometer.

RAILROAD TO OFFER PRIZE FOR CLUB WORK

Awards for Essay Will Be Made by Baltimore & Ohio in 55 Counties

It is announced at Ohio State university that the Baltimore and Ohio railroad will give this year a \$100 scholarship or a trip to Washington to the boy and the girl who do the most outstanding and efficient farm and home club work in each of the 55 Ohio counties served by the B. and O.

The prize trip is provided to take care of winners too young to apply the money toward a winter course or a regular four-year course at an agricultural college.

The prizes will be awarded through the state leader's office at the university, according to state club rules. The only requirement which the railroad makes of the contestant is a duplicate copy, with pictures, of the final report on the work.

ELIZABETH TOWNSHIP FARMER ANSWERS DEATH'S SUMMONS

William Saylor, well known Elizabeth township farmer, died about midnight Tuesday after a lengthy illness of what has been pronounced as heart trouble. Mr. Saylor was 66 years of age and was born and reared in Elizabeth township and was widely known and honored. He was a member of the Cove Springs Christian church and of the Elizabeth township farm bureau.

Mr. Saylor is survived by his wife four children, Mrs. John Freeman, Mrs. John Benham, Mrs. Ralph Gundolph all of east of Troy and a son Roy Saylor of Akron. There are also two grandchildren in the Freeman family, one in the Gundolph and one in the son's family. Mrs. Martha Neal is a sister.

The funeral was held Thursday afternoon from the Cove Springs church with burial in New Carlisle cemetery.

RADIO TELEPHONE SPANS CONTINENT

Schenectady, N. Y., March 30—Radio telephone spanned the continent Saturday night for the first time. A telegram from the San Francisco Chronicle received Saturday by the General Electric Company announces that the concert given at the company's Schenectady station Friday night was heard perfectly on the Pacific coast.

Officials of the General Electric Company said the previous farthest west point reached from the Atlantic seaboard was Reno, Nev.

GREEKS SEE GHOSTS

Athens—The "Turkish submarines" reported by Greek sailors in the Aegean Sea turned out to be floating barrels.

FOX RUN 21 MILES

Alcombe, Eng.—A fox pursued from the Swale in the Tichman section escaped the hounds in the Weald of Kent, 21 miles from where the chase began.

TRAVELS WITH DEAD

Belgrade—Mile, Marie Savoril had to travel 150 miles with the body of a man who killed himself in her railway compartment. She collapsed when the door was opened.

DOUBLE LOVE SUICIDE

Bordeaux—Jilted by the same man, Adele Carle and Elizabeth Fredonil decided to commit suicide. Both took

ART VS. ADVERTISING

Guatemala City—The civil authorities have ruled that advertising signs are unsightly and have refused to permit more to be erected.

MONEY TO LOAN

ROGERS & STEPHENS,
Shoals, Ind. tf.

STORE BOUGHT STUFF

By Aunt Aggie
Farm folks ain't like they was
When I was a growin' girl;
Seems like they ain't satisfied
With the steadiest job in the world.
I reckon their heads got turned,
With things movin' on so fast;
They're mixed up in the traffic
And got to move on with the rest.

Not many of 'em now-days
Figure on livin' at home;
They raise what they can market
And leave the rest alone.
You never hear of a grist-mill
A-takin' corn on exchange;
It's cash for wool an' cotton
An' cows from off the range.

Meat ain't served the family,
Without the packer's brand,
And as for fruit an' vegetables
They must be factory canned.
I reckon a farmer's youngster
Would choke on corn-meal mush.
An' wearin' homespun dresses
Would cause his wife to blush.

Money's right nice to handle
An' keep fer a rainy day;
It comes in mighty handy
Fer many a play;
But farmers ain't meant fer profit,
On the town-store tradin' plan;
The surest way to save it
Is livin' off the land.

SHORTS AND MIDLINGS

Says Sam: So live that folks won't whisper at your funeral.

Whim is no guide to food needs, especially for children. Youngsters can be taught to like the foods good for them.

Every dead ear of corn means 900 missing stalks. Test seed.

Sweet or sour milk is about equally good for poultry, but it ought always to be the same. You can keep your milk sour, but you can't always keep sweet milk sweet.

A good teacher is worth more to a community than the price of the finest school building that can be put up.

Each quail on your farm is worth five dollars to you, says Government entomologists who have been figuring on the expensive appetites of the bugs quail eat.

Hatch chicks early; the heavy breeds by May 1; the light breeds by May 15.

Five pounds of nitrate of soda per orchard tree has increased yield 450 per cent, in some instances. Oh shiver, my brothers, and shake At the fate of the land-mining Japs. Who won't fertilize And who loudly denies That the farmers must put it if he'll take!

"No legacy is so rich as honesty."

UNHEARD OF FISH WEIGHING 150 POUNDS IS CAUGHT IN PACIFIC AT GREAT DEPTH

Honolulu, T. H., March 30—A fish of a species hitherto unknown to science, caught by a Japanese fisherman 13 miles off shore at a depth of 1,200 feet, is on exhibition here, exciting great interest among ichthyologists. The specimen weighs 150 pounds, is flat and almost circular.

Silver predominates in the coloring of its body, with its fins and snout of scarlet and the dorsal, about 12 inches long, spotted with white.

The head is mottled with dark grey and the eyes are round and about four inches in diameter.

Dr. C. H. Edmondson, ichthyologist at the University of Hawaii, said that the specimen was not classified in any available scientific work.

The fish will be presented to the Bishop Museum here.

PIN CAUSES EXPLOSION

Boothstown, Eng.—Eleven-year-old Benjamin Clare stuck a pin into a cartridge. It exploded, destroying an eye and blowing off one of the boy's arms.

Political Announcement

TOWNSHIP TRUSTEE

I will be a candidate for the nomination for trustee of Centre Township on the democratic ticket, subject to the decision of the primary, Tuesday, May 2, 1922. Efforts and votes in my behalf will be appreciated.

AUGUST R. FELIX

CENTRE TOWNSHIP ASSESSOR

Henry F. Bunner announces himself as a candidate for the democratic nomination for assessor of Centre Township, subject to the decision of the primary, May 2, 1922.
