The American Medical News, speaking of the diet necessary to reduce flesh says: "The normal diet of one in perfect health would be one of nitrogenous principles to five or six of the others. A reduction of the latter so that the proportion shall be one to three will make a very personal change in the physical condition. To effect this let the diet be lean meat (no pork), lean fish (no salmon), cheese, peas, beans, cabbage, turnips and aspidous fruit. Avoid farinaceous food, including bread, pastry and potatoes, and all fats (butter especially) and sweets, especially of the kind being especially fattening. Drink claret (with little or no water) and other soft or light wines, and if flour is used at all let it be in bread instead of very dry. A perseverance in this diet will inevitably reduce the adipose of any human body."
