MARKET REPORTS

DAILY REPORT OF LOCAL
AND FOREIGN MARKETS

BERNE MARKET

(Corrected Dec. 31)

SHERRIFF SALE
Cause Number 13642
The Union Central Life Insurance Company, Alton, Ill., Arnold, James O. Butler, and William Barton.

By virtue of an order of sale to me directed from the Clerk of the Adams Circuit Court, of Adams County, Indiana, to sell to the public at public sale the highest bidder on Saturday the 10th day of January A. D. 1931, between the hours of 10 o'clock A. M. and 1 o'clock P. M. of said day at the end of the public sale of the rents and profits for a term not exceeding seven years, of the following described real estate, TO-WIT: The northwest quarter (1/4) of the northwest quarter (1/4) and the southwest quarter (1/4) of the southwest quarter (1/4) of section forty (40) and also the east (1/4) of the northeast quarter (1/4) of the southeast quarter (1/4) of section thirty-two (32) in the town of Bluffton, in the north range forty (40) east containing in all one hundred and forty acres, more or less, in Adams County, Indiana.

The northwest quarter (1/4) and the southwest quarter (1/4) of the northwest quarter (1/4) of the southwest quarter (1/4) of section forty (40) and also the east (1/4) of the northeast quarter (1/4) of the southeast quarter (1/4) of section thirty-two (32) in the town of Bluffton, in the north range forty (40) east containing in all one hundred and forty acres, more or less, in Adams County, Indiana.

It is expected that the invention will supersede the old method of stethoscopy. The new invention, the electro-stethoscope, will in short do for stethoscopy what the Roentgen apparatus has done for surgery and medicine.

The invention consists of two parts, the apparatus itself being a single whole. The first part, which is an application of modern radio technique to the needs of medicine, consists of a sound amplifying apparatus proceeding from the body of a patient. The second part of the apparatus converts the sounds into linear waves which are reproduced and made visible in a mirror. In front of the mirror is fitted a camera and pressure upon a lever serves to set it in action when photographs of the recorded sound waves are required.

Experiments show that different types of waves are characteristic of various conditions of health. Another advantage of the apparatus is that it makes it possible for doctors to take a large number of pictures of interesting and important cases, the records so obtained being of a permanent nature.

PAUL H. GRAHAM,
Assistant Secretary-Treasurer

Forget Where to Send Fine

Saugus, Mass. (UPI)—When John Belsis, 21, was arrested for failing to pay a fine for disturbing the peace his alibi was that he had forgotten the address of Saugus police headquarters and hence did not know where to send the money. Police refreshed his memory.

Mr. Leon Rupley of Cincinnati, Ohio, is spending the week with his sister and other relatives.

Luther Martin is visiting with Mr. and Mrs. Thomas Raggan in Chicago.

Mr. Leon Rupley and children of Cincinnati City are guests of Mr. and Mrs. Kenneth Sheehan.

Mr. and Mrs. Merl Teeple and daughter Edna have returned from Waupaca, Wisconsin where they

GUELPH, ONT.—(UPI)—Despite 82
years of continuous service, a gavel
presented to the Wellington County
council in 1849 still is being banged
by Warted Sidney Richardson in
Fort Wayne.

Mr. and Mrs. A. O. Klensworth
and son Jack of Van Wert, Ohio
are guests of Mr. and Mrs. Herbert
Chew.

PASTOR TURNS CLERK
OKLAHOMA CITY.—(UPI)—The
Rev. Newton H. Royer, former pastor
of the First Lutheran Church here—a post he had held for 21
years, was not unemployed long. Royer resigned recently as the
result of a controversy over his "mod-
ern and liberal" views among his
congregation. He was at work to
day as a clerk in the office of Paul
Huston, assistant county treasurer.

It is expected that the invention
will supersede the old method of
stethoscopy. The new invention,
the electro-stethoscope, will in
short do for stethoscopy what the
Roentgen apparatus has done for
surgery and medicine.

The invention consists of two
parts, the apparatus itself being a
single whole. The first part, which
is an application of modern radio
technique to the needs of medicine,
consists of a sound amplifying
apparatus proceeding from the
body of a patient. The second part
of the apparatus converts the
sounds into linear waves which
are reproduced and made visible
in a mirror. In front of the mirror
is fitted a camera and pressure
upon a lever serves to set it in
action when photographs of the
recorded sound waves are required.
