FOR RENT—2 furnished rooms on First St. No Card Parties permitted. Must be respectable people. 310 N. 1st St. 60-3tx

FOR RENT—Upper apartment, 4 rooms and bath. Heat furnished and garage Phone 1240. 60-3tx

Locusts

The periodical cicada, popularly known as the 17-year locust, although it is not a locust, is bright green in color when first mature and then gradually becomes a dark brownish red in color. The 17-year variety often appears in the same territory as the 13-year variety, and when large numbers of both these broods appear together there is a veritable epidemic, such as there was in 1898.

Famous Englishmen's Wills

Wills have been filed in Somerset house, London, since 1882. Among them are the last testaments of Shakespeare, Milton, Admiral Nelson, the duke of Wellington (conqueror of Napoleon), William Pitt, Burke and Dr. Samuel Johnson. A fee of one shilling entitles any person to inspect any of these wills, with the exception of Shakespeare's, for which the fee is two shillings.

Phonogram Gramophone

The word "phonogram" is an invention one. When the disc came for recording and reproducing sound was invented it was called a "phonogram," and later a "phonograph." The machine had a round cylinder instead of the flat disc, and of course the inventor wanted to distinguish it from the phonograph or phonograph "tune" he named. "Now what can I call it?" Then he had a bright idea; he remembered the backwards he had used when a boy, and tested the word "phonogram" around until it was "gramophone."

LOANS

WILL a loan up to \$300.00 help you? We make confidential loans on your own personal security. No endorsers—lowest terms. We feature prompt service—you get the money the same day you apply. Small monthly or weekly payments—arranged to suit your convenience. Call, write or phone us. Special Plan for Farmers.

Franklin Security Co.

Barley 30c
Rye 30c
Soy Beans 30c
New No. 4 White Corn 31c
New No. 4 Yellow Corn 36c

LOCAL GROCERS EGG MARKET

Eggs dozen 9c

"East" and "West"

"Never the twain shall meet" is a phrase borrowed from the poem "The Ballad of East and West," by Rudyard Kipling. The full significance of the expression can be gained only by reading the entire poem. Isolated from the text the lines are interpreted as meaning "that people of the eastern civilization, such as the Chinese and the Japanese, and those of the western civilization, such as the English and the Americans, cannot affiliate upon a truly friendly basis."

Civil War County Jumpers

A bounty jumper in the Civil war was one who upon payment of bounty enlisted for the army and after desertion from the service. Usually a man who did this successfully once repeated the performance until he had accumulated quite a sum of money or was caught at the game.

"Fortunate Isles"

The Isles of the Blessed Greek mythology placed in the Western ocean. Medieval map makers sometimes named Madeira and the Canaries the Fortunate Islands, which was another name for Isles of the Blessed.

Waiting for Lindy at Hartford

A crowd of more than a thousand waited all night at the Hartford, Conn., airport for the arrival of Col. Lindbergh, following the detention there of Henry "Red" Johnson, friend of Baby Lindy's nurse.

Blast Kills 14

Aerial view of plant of the New Jersey Public Service Company at South Camden, N. J., following an explosion which killed 14 men. Inset shows workmen removing bodies.

GLASS OF WATER HIDES ENERGY

Stanford University, Cal., Mar. 9.—(U.P.)—Locked up in the atoms of a glass of water is enough energy to supply 10,000 families with light and power for two weeks, Stanford University physicists have found.

In a cellar laboratory, Dr. P. A. Ross and his associate, Dr. D. L. Webster, turned an electric "battering ram" on a glass of water. It broke up its atoms and photographed them. Millions of electrons cross and record within the atoms of water at such terrific speed only a camera can "see" them, they said.

Energy generated by the surging electrons would supply sufficient light and power for 10,000 families, they declare.
To study a more structure, the physicists break the atom to pieces with streams of electrons produced by X-ray tubes. When the bullet-like rays hit the atom an invisible light is emanated. This light is recorded by a photographic device which enables them to portray atomic structure.

Dr. Ross, in his cellar laboratory, unleashes 500,000 volts of direct current on a glass of water. This is the greatest electrical power of its type achieved in America.

It is this atomic "battering ram" that aids science in hammering to pieces the atom as the 50,000 volts connected directly with a monster six-foot X-ray tube, goes into action.
Ross and Webster have conducted exhaustive research into the atomic structure of both liquids

and metals. At present, through the "battering ram" method, they are experimenting with the effects of tungsten in hardening copper.

Scientific Fruit Treatment

The way in which science can deal with fruit is astonishing. It can change the flavor, size, color and size; it can improve its keeping qualities; it can produce earlier or later ripening. Take apples for instance. Scientific treatment has now given us a ripening season for English apples which extends from June when the earliest are ready until the following March, when the latest come to perfection. So long as we may have home-grown apples at their best the whole year round.—Exchange

Famous Police Body

The royal Canadian mounted police patrol the 42°-eastern frontier, keep peace and order in the sub-Arctic region and maintain posts on the shores of Hudson bay, in the Yukon, on Herschel island and on some of the Arctic islands. They represent Canadian authority among the active Eskimos. And their record in the prevention of crime has established their fame throughout the world.

Hikers Protest

As a protest against the closing of the Sunnyside estate near Kough, England, to the public, the members of hiking clubs and others climbed a fence and walked in single file across the forbidden land.

Settled by Dutch

Harlem in New York city was settled about 1624 by people from Holland and the name was given it by Gov. Peter Stuyvesant in 1630.

FARM PAYS WAY IN COLLEGE

Ely, Nev., Mar. 9.—(U.P.)—Jimmy Jensen, University of Nevada freshman, will go far in this world, if his early achievements are a criterion.

Jimmy put himself through high school and is now financing his way through college. He made his money farming.

He rented 20 acres from his father on a half-share basis and netted over \$500 the first year. The next two years he leased a much larger area on the same share-crop basis and again made a good profit.

Part of this money was spent on building up his farm. He bought five dairy cows, two heifers, a team of horses, a quantity of hay and grain, and other equipment. All this time he was paying all school expenses, and putting aside a fund to finance his college education.

Jimmy now has enough money for his college education the first two years. His farm is a going proposition and he anticipates profits accruing from it will provide him with funds for the full course.

He will not sell any of his dairy herd, or other farm assets. Rather he will increase them, so that when he finally receives his degree, he will have the nucleus of a farm.

Sanming It Up

Even a dead wind is better than none. No man ever worked his passage in a dead calm. Let a man, therefore, was pale because of opposition.—Exchange

GREEN BAY JOB PLAN SUCCESS

New York, Mar. 9.—(U.P.)—The war against depression campaign, sponsored by the American Legion, American Federation of Labor, Association of National Advertisers, Legion Auxiliary, and other organizations, is making headway.

The primary objective is the securing of jobs for at least one million men now unemployed. All employers of labor are being contacted for this purpose by committees making their headquarters at Legion posts.

The Green Bay plan, a method followed in that Wisconsin town of 10,000, is one of the tested means applicable, with necessary modifications to suit local conditions, to many American communities. By this plan, that city created about \$10,000 weekly wages, and relieved the town authorities of a poor relief expense of \$6,000 a month.

Green Bay reduced its unemployment from 1,745 to 722. Of the total unemployed, 1,023 were placed permanently and 512 were given temporary jobs. One hundred and seventy-five women also were placed. The remaining 500 were taken care of as well as possible, being given part-time work.

All the civic elements of a town added in this plan. The war-time drive atmosphere was inculcated from the start. The campaign started by the mayor issuing a proclamation.

Test Your Knowledge

Can you answer seven of these test questions? Turn to Page Four for the answers.

1. To what country does the island of Elba belong?
2. Is Soviet Russia a member of the League of Nations?
3. How many children has Al Capone?
4. To what genus do turtles belong?
5. Which is the tallest building in the U. S.?
6. What country did the Aztecs occupy?
7. Of what other country is Christian X of Denmark also King?
8. Which continents are separated by Behring Strait?
9. In what Department is the Bureau of Prohibition?
10. Where is the U. S. Disciplinary Barracks located.

Pastoral Ruse

Some popular pastors, receiving calls to deliver Sunday sermons in other cities, find they must cloak their movements in secrecy in order to avoid a reduction in attendance at their own churches while they are away. One of the best known New York preachers never lets his congregation know in advance when he plans to be absent. Not until the churchgoers enter the pews and receive programs do they find it out.—New York Times

Old Roman Fire Fighters

The Vigiles, the police of ancient Rome, were required to prevent and extinguish fires. There were seven cohorts, or battalions, and fourteen station houses. Police were stationed at public places and, as fire engines, were provided with axes, ropes, buckets and also a kind of fire engine known as the siphon. The whole force numbered about 7,000.

Mirage and Reality

There are three differences between desert travelers can tell whether they see a mirage or a lake of real water. A mirage usually quivers and changes in shape; a real lake does not have this appearance at a distance. A real lake usually has a dark band of vegetation around it and birds fly near it and above it.

Rodin's Plasterpiece

"The Boy of Hell," or, as it is more usually called, "The Gates of Hell," is a work by the eminent French sculptor Rodin on which he originally intended to place his famous statue, The Thinker. We understand that this monument has now been set up in Paris, contrary to the sculptor's original idea, Washington Star

ARRIVALS

A seven pound girl baby was born to Mrs. Mary Werling, widow of the late Dorcas Werling who was shot by Joseph Everett, June 29, 1931, at her home near Pleasant Mills at 3 o'clock Wednesday morning. The baby is the first daughter and second child in the family. Both mother and baby are reported to be getting along fine.

Mr. and Mrs. Wilford Ray of Columbia City are the parents of a nine pound girl baby born to them March 1. The baby was named Shirley Jean.

Evening Not Wholly Lost

A young man out our way called at a home where he was not wanted the other evening. Soon afterward he issued from the door, with the father not far behind; and in summing up the experience he said it was unusual, but he certainly did get a great kick out of it.—Detroit News

Sard Glasses for Speakers

To keep down the length of speeches the mayor of Belfast, Ireland, installed two old-fashioned sard glasses, inclosed in wooden cases, on his desk. The glasses were connected with an electric device which flashed a blue light when the time limit was approaching, and a red light when the time was up.

Canada Protects Walrus

The walrus in Canadian waters is protected. No one is allowed to kill them except for food, and the number in any one year is limited to seven for Eskimos and four for whites. The walrus is an important food for the Eskimo and his dogs. All kills have to be reported to the mounted police.

Ostrich Feathers

Feathers are clipped from ostriches every nine months. A prime bird yields about 20 ounces of feathers at a clipping.

Corner Stones of Liberty

The Magna Charta the Petition of Rights and the Bill of Rights have been called the "Three Pillars of the British Constitution."

The Spring Planting of Evergreens

For all varieties of evergreens spring is a favorite season for transplanting. They can be moved with little setback up to the time when new shoots are starting and even later by experienced planters, though it is sometimes necessary to pinch off part of the new shoots which otherwise might wilt.

After being moved in the spring, an evergreen has a long period of favorable weather in which to become established. The hazards of the mid-summer heat and drought may be as great as those of a winter season, but it is easier for the garden owner to overcome them. The most common cause of loss in evergreen is dryness; and newly planted specimens should be watched during dry periods. The roots of any newly planted tree or shrub penetrate a relatively small section of soil, which may easily become dry. Until the plant has had time to develop new and longer roots, capable of foraging for food and moisture to a considerable distance, it needs special attention, and sometimes frequent watering. This applies to deciduous plants as well as evergreens.

Evergreens should be dug with a ball of earth about the roots, and this earth should be kept well moistened throughout shipping and planting and after planting. The shorter the time between digging and planting the better. It is not convenient to water frequently after planting, a mulch of hay or straw will retard drying

COURT HOUSE

Real Estate Transfers
Frank E. Andrews et al. 5 acres in Kirkland township to Julius M. Andrews for \$100.
Fred J. Bracht et al. 20 acres in Kirkland township, to Doris Shady et al. for \$400.00.
William E. Miller et al. 60 acres in Monroe township to Gladys well for \$1.00.
Gladys Forwell, 60 acres in Monroe township, to Frank L. Miller for \$1.00.
Eberle, Caley et al. 50 acres in Root Township to Charles E. B. et al. for \$1.00.

SHERIFF SALE

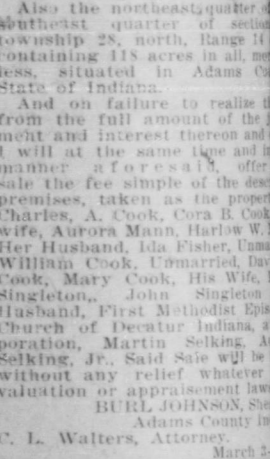

In the Adams Circuit Court of Indiana, cause Number 10. First Joint Stock Land Bank of Fort Wayne, vs. Charles A. Cook, R. B. Cook, His wife, Ida Cook, John W. Mann, her husband, Ida Fisher, Unmarried, Ham Cook, Unmarried, Dan Cook, Mary Cook, His wife, Singleton, John Singleton, Ham Cook, First Methodist Episcopal Church of Decatur, Indiana, Corporation, Martin Selking, As Sheriff. By virtue of an order of the court directed and delivered to the above entitled cause, I have caused an auction to be held at the door east entrance first floor of Adams County, between the hours of 10 o'clock A. M. and 4 o'clock P. M. Saturday the 25th day of March 1932, the rents and profits of term not exceeding seven years the following described real estate to-wit:

The east half of the north quarter of section 30, Township north, range 14 east, except 1/4 out of the southeast corner of said quarter of section 30, of Adams County, Indiana, for use of graded school.

Also the northeast quarter of south east quarter of section 28, Township 28 north, Range 14 east, containing 118 acres in all, more or less, situated in Adams County, Indiana.
And on failure to realize from the full amount of the premises, taken as the property of Charles A. Cook, R. B. Cook, wife, Aurora Mann, Harlow W. Her Husband, Ida Fisher, Unmarried, William Cook, Unmarried, Dan Cook, Mary Cook, His wife, Singleton, John Singleton, Ham Cook, First Methodist Episcopal Church of Decatur, Indiana, Corporation, Martin Selking, As Sheriff, Jr. Said sale will be without any relief whatever in valuation or appraisal laws of the State of Indiana.
BURL JOHNSON, Sheriff
Adams County Ind.
C. L. Walters, Attorney
March 25

WHAT IS HOME

WITHOUT A GARDEN?

Set Tree Slightly Deeper

out and lessen the amount of water required.

The permanence of an evergreen in a given location depends on the variety. Too often the beginner purchases a tree because he admires its appearance without careful inquiry being made as to where they are to be planted. This is a question upon which this knowledge should be sought in some sections only the hardy varieties can be counted upon to survive; while in others there is a much wider choice, owing to more favorable soil and climatic conditions. In the East and South the beautiful broad-leaved evergreens, such as rhododendrons and azaleas, are available, which seldom succeed in the North-Central States. But everywhere one can have beautiful and permanent evergreen plantings, if he chooses the varieties that are happy in his locality.
