

PASTURES ARE GOOD FOR PIGS

Pastures Replace One Eighth Of Feed Concentrates For Pigs

Just how valuable is pasture for pigs?

In 29 different tests with about 2,000 pigs in Ohio, Wisconsin, Pennsylvania, Iowa, and South Dakota the total of concentrated feed eaten by pigs on pasture averaged about 13 per cent less for every 100 pounds of gain than for the pigs in dry lots, according to summaries by the United States Department of Agriculture, states L. A. Richardson, U-T Extension livestock specialist.

The pigs were put on test at an average weight of 55 pounds. About one-half of them were allowed pasture. The tests showed that pasture took the place of about 1 out of every 8 pounds of concentrated feed needed when pasture was not furnished. Pigs on pasture gained about a quarter of a pound more per day than those in a dry lot. There was less opportunity for them to pick up parasites. Aside from other things, the pasture furnished vitamins, minerals, and exercise—all necessary for speedy pork production.

Pigs should not be stunted with too little pasture. The exact number of pigs that can be carried per acre depends on the pasture. Pigs like and make good gains on alfalfa, lespedeza, rape, clovers, Sudan grass, green soybeans, and cowpeas, Bermuda, bluegrass, and rye when properly supplemented with concentrated feeds. They make the best gains, however, on young, tender, succulent, green growth. The value of pig pastures lessens as the growth becomes woody. New growth following a hay crop or clipping is good feed.

Two or more pastures give an opportunity to shift the pigs when pastures go down in feed value. Many farmers use a number of small pastures. Some plant late crops to lengthen the pasture season.

AFTERNOON BEST FOR BUTCHERING

Cool Dry Day Is Ideal Butchering Weather On Farm

Lafayette, Ind., Nov. 27—Nearly 15,000 farmers, representing 565 communities in Indiana, "got their heads together" this fall to make some definite recommendations of what they wanted formulated into the 1937 agricultural conservation program. These recommendations recently were sent to Washington D. C. by Marshall Vogler, chairman of the state agricultural conservation committee, which has its headquarters at Purdue University.

There were 23 Indiana counties that favored no change in the 1936 program from the 1936 program, 33 counties that would like to see an increase in the soil building program, and 17 counties expressed a belief that payments should be made on soil conserving acres rather than on the number of soil depleting acres.

When it came to crop classification in the 1937 program, seven counties were satisfied with the 1936 program, 10 counties wanted any crop plowed into the soil to be considered as soil conserving, 49 counties asked that all legumes cut for hay, pastured or plowed down be made soil conserving.

Fifty-seven counties believed that the bases established in connection with the 1936 soil conserving program would be satisfactory for use again in the 1937 program.

What soil building practices for which payment was made in 1936 should be retained in 1937? Fifty counties answered that question by approving all of the 1936 soil building practices, and 33 counties asked for pay when plowing under rye or other green vegetative crops of any kind that has a 60 day growth. Several other counties wanted pay for lime on a tonnage basis, timothy in a class for payment, and pay for weed control.

There were 47 counties that

CHANGES ASKED IN FARM PLAN

Farmers Recommend Alterations In Government Farm Program

Fry made a study of 118 farms within the area in the winter of 1934-35—and found that the average farm woodland produced more than 11 cords of fuel wood, worth \$4 per cord; 649 board feet of lumber, worth \$25 per thousand; 41 railway ties, worth 35 cents each; and 259 posts, worth 10 cents a piece.

Fry's survey showed that the average farm included in the study produced in 1 year woodland products valued at \$101.67. Approximately 85 percent of the woodland products, valued at more than \$87, were used on the farm and would have cost the farmer \$228 a year if he had bought them on the open market. Thus, the farmers averaged an annual saving of about \$141 apiece by utilizing woodland property. As a single example, the fuel wood used annually on the average farm was equal in heating value to 9 1/2 tons of anthracite coal.

FARM WOODLOTS ARE PROFITABLE

Farmers Average \$141 Acre By Utilizing Woodland

Farm woodlands are not only helping to control soil erosion but are paying farmers on the Coon Creek, Wis., Soil Conservation Service project area good dividends, according to John Fry of the Soil Conservation Service forestry staff.

Fry made a study of 118 farms within the area in the winter of 1934-35—and found that the average farm woodland produced more than 11 cords of fuel wood, worth \$4 per cord; 649 board feet of lumber, worth \$25 per thousand; 41 railway ties, worth 35 cents each; and 259 posts, worth 10 cents a piece.

Fry's survey showed that the average farm included in the study produced in 1 year woodland products valued at \$101.67. Approximately 85 percent of the woodland products, valued at more than \$87, were used on the farm and would have cost the farmer \$228 a year if he had bought them on the open market. DRUGS USELESS FOR TREATMENT

Poultry Owners Warned Against Use Of Medicine For Farm Flocks

Urbana, Ill., Nov. 27—No drug or mixture of drugs known to veterinary medicine at this time can be depended upon to expel all types of worms which may infest poultry and other animals, Dr. H. E. Moskey, veterinarian of the U. S. Food and Drug Administration, told Illinois College of Agriculture.

In discussing so-called poultry conditioners, tonics and other products labeled as containing health-giving properties and as being valuable in increasing egg production, he pointed out that health can not be sold in bottle, box or bag. Furthermore, he stated that no known drug or combination of drugs, when fed to poultry, can be considered valuable in increasing egg production.

It was emphasized at the conference that the most effective steps in the prevention and cure of poultry diseases was good, clean poultry management and early diagnosis of any disease outbreaks.

More than 130 veterinarians of the state attended the conference which was in charge of Dr. Robert Graham, chief in animal pathology and hygiene of the agricultural college. A full day of the meeting was devoted to the most recent developments in the solution of the poultry disease problem.

It developed at the meeting that Illinois veterinarians are making a general practice of performing free autopsies where the specimens are brought to their offices. This practice is being fostered in an effort to reduce poultry losses and to aid owners in saving money formerly spent for remedies of little or no value.

Test Your Knowledge

Can you answer seven of these ten questions? Turn to page Four for the answers.

1. Name the California city on the eastern shore of San Francisco Bay opposite San Francisco, and facing the Golden Gate.
2. What is the name for the unusually violent wind-storms in the West Indies?
3. To which committee of the U. S. House of Representatives are bills for raising revenue referred?
4. Who wrote, "The Cricket on the Hearth"?
5. What does "ecuyer do roi" mean?
6. Is Lower California a part of the United States?
7. On which river is the Shoshon Dam?

Gas Engine and Pump Jack.

TERMS—CASH.

ROY JOHNSON—Auctioneer

W. A. Lower—Clerk

Lunch will be served.

CHAMP 4-H CANNER

MAXINE WALLACE, 19, Lafayette, will be one of Indiana's delegates to the 15th National Club Congress to be held in Chicago, Nov. 27-Dec. 5 which over 1,000 outstanding 4-H clubbers of the nation will attend. She won the trip as a prize from the Kerr Glass Corporation, sponsor of a national canning contest conducted by extension agents, in which she was named state champion by State Club Leader Z. M. Smith. In six years she canned 1,456 pints of food valued at \$944.60 and won prizes on all projects of \$19.45. She will compete for central states championship, and if winner will be one of four contenders for cash college scholarships of \$300, \$200, and \$100 given by the sponsor.

HORSE SENSE

Farmers who have fenced out cattle from the farm woodlot find that it pays in increased timber growth and additional wind protection.

A hog that weighs from 200 to 500 pounds produces the most desirable carcass both for home use and the market.

It pays to feed horses when the range is in poor condition. Foals, colts and working animals especially need good feed.

Unless the birth rate in this country should rise or immigration increase, a declining national population is inevitable within 15 years.

Each year about 10,000 persons lose their lives and about 250 million dollars' worth of property is lost through fire.

A fairly constant temperature will be maintained in the new root cellar now under construction at the North Dakota Agricultural College. A fill of five feet of earth over the top of the cellar protects the interior both from cold and heat.

Demand for farms has improved generally throughout the United States, and there are fewer farm mortgage foreclosures and fewer tax delinquencies.

Continued high prices for sweet-clover, red clover and alfalfa seed in the spring and fall of 1937 are in prospect because of the current short supplies and the increased demand.

The low point in the downward trend of all horses and mules on U. S. farms is expected to be reached in 1940, and the low point in the number of animals of work age will occur a few years later. Prices are expected to increase gradually above the present figures.

When grain and grass failed in the drought stricken states the past summer, grasshoppers in many instances took to the trees for leaf food.

4-H FOOD WINS TRIP

BONITA HOUSE, 18, Dayton, Tippecanoe County, named Indiana 4-H champion in foods by May A. Masten, associate state club leader, has completed seven years of club projects. Among them she made 609 bakings, and prepared 1,127 dishes. Prizes won on exhibits and contests at the county and state fairs total \$312.5. A value of \$885.84 is placed on all her club projects. As state champion she receives an all-expense educational trip to the 15th National Club Congress in Chicago, Nov. 27-Dec. 5, and will compete with other central state champions for two Servel Electrolux kerosene operated refrigerators. She is also contender for one of three cash college scholarships of \$400, \$300, and \$200, provided by the maker of the refrigerator and sponsor of the contest.
