Related in name and good looks—the new COMPACT CORVAIR and CHEVROLET

A strong family resemblance between the all-new Corvair and Chevrolet's conventional line of passenger cars for 1960 is evident in this unusual profile view. At 150 inches, however, the Corvair is more than two and one-half feet shorter, while its 108-inch wheelbase compares with 119 on the Impala Sport Sedan with which it appears.

Elegance and chassis refinements characterize the larger Chevrolets in an offering of 16 passenger models. The Corvair introduces an array of compact mechanical innovations designed to provide the riding and driving qualities demanded by the American buyer. The Corvair and conventional model will be in dealer showrooms Oct. 2.

Man Must Harness Newfound Powers

NEW YORK (UPI)—Six renowned thinkers agreed today that mankind must harness its new-found scientific powers for peaceful purposes or face possible extinction.

They warned that man, in taking advantage of science's spectacular advances, must be careful not to let science become his master.

The six panel members, participating in a symposium on "The Future of Man," offered a variety of proposals designed to cope with challenges expected to face mankind in the near future.

They were poet Robert Frost, author and biologist Sir Julian Huxley, philosopher Lord Bertrand Russell, zoologist Dr. Hermann J. Muller, anthropologist Dr. Ashley Montagu and Devereux Josephs, former chairman of the New York Life Insurance Co. and former president of the Carnegie Corp.

Establishment of a powerful world authority, a world population policy, a system of worldwide education and increased government planning were among the proposals advanced by the panel members in the symposium held at the Waldorf-Astoria Hotel.

In an introductory address, Dr. Milton S. Eisenhower, president of Johns Hopkins University and chairman of the symposium, called for a program that will yield "peace with justice and the constructive use of our new-found power."

The alternative, he said, is "to toil in fear—fear that terrible forces will, by design or miscalculation, break loose and destroy mankind."

Lord Russell, 87, a Nobel Prize winner in 1950, said that mankind must choose, within a few decades, whether to accept extinction or create a powerful world authority with a monopoly on the major weapons of war. He participated by means of video tape and short-wave radio from London.

Montagu said a system of worldwide education was the key toward elimination of war.

Josephs said mankind's future depends on its adaptability to change, "because it will come at an even faster pace."

DOESN'T LIKE HER JOB—Dona Isabel Urcuyo de Somoza, 34, the First Lady of Nicaragua, doesn't like her job but was quick to add that being the President's wife gives her a chance to do a lot of good work. She said that in an interview during a trip to New York. The mother of seven children, ranging from 12 to one year, she supervises 15 servants, plans meals, entertains four days a week, works for charity, attends receptions and political meetings.

Required Training Urged For Parents

By GAY PAULEY
UPI Women's Editor

NEW YORK (UPI)—A woman lawyer and former prosecutor today suggested one method of curbing the nation's soaring juvenile crime rate—a required course for parents in parenthood.

"Juvenile delinquency begins at home. It's been said before, but it's all true," said Mrs. Lillian

Malley Vernon, 49, a grandmother who is co-chairman of the women's division of the Police Athletic League Inc.

Mrs. Vernon suggested in an interview that "What we need are courses in how to be parents. It is from the parent that the child must learn respect for others, respect for the law and authority, respect for other people's property."

"I think we're too inclined to spare the rod," she said. "When I was a child, I always was told that if I were punished at school, I would get the same punishment when I got home."

"Today, the parent attacks the teacher if the child is punished. It seems to me that parents hate to admit they're doing a poor job on their children. They blame everybody but themselves. They expect the teachers to do their job...or expect agencies like ours to take over."

"PAL tries to help so do teachers, so do numerous other agencies interested in child welfare. But there is no substitute for the parent."

One Look Inside will show you why

OUTHEAT—OUTLAST ALL OTHERS!

Behind the gleaming, porcelain cabinet, you'll find a patented inner unit that makes traveling floor heat possible. Look at the big, furnace-type blower that drives the air through a battery of inner heat tubes that set right in the heart of the fire! Sieglar doesn't wait for the heat to come out...it goes right in after it, then forces it over your floor! Come in and see for yourself why Sieglar outheats—outlasts all others!

Articles Inform Public Of Services Of Lawyer

(Editor's note: This is another in a series of articles presented as a public service by the Adams county bar association. These articles are not intended to answer individual problems which require specific advice.)

LOOKING AHEAD

You can tell a lot about people by the way they regard time.

Do they put stock mostly in the past—their record; the present—their direct job in work or play; or the future—their plans.

Why not use all three dimensions of time? Past experience to guide, the present for zest, and the future to realize dreams.

Lawyers report a sharp shift in the way people regard time and the law: Of old they thought of law in terms of past facts like failures to meet legal duties, misdeeds, etc.—facts useful chiefly in law-suits.

You still have to think of the record, since you may have to go to trial some time. So keep good records of your affairs.

But more and more people now also think of the law in the future

tense—in terms of built-in safeguards for plans which they want to go through without legal hitches.

Our heavy income and death taxes have made people plan ahead legally, rather than wait for the ax to fall.

Any time you buy or sell a home or a business or make an investment you have choices of how you may do it—some wise, some not, in view of your circumstances. Should you insist on an abstract or accept or offer instead a title insurance policy? (Your lawyer has a definite part to play in either event.)

Should you do business as a sole proprietor, a partnership, or corporation? Do your contracts set out ways of meeting unexpected events? How best may you serve your estate (and also carry out your wishes)—by a will or a trust, or by direct gifts?

While all of these things point forward, the past in the form of court records can serve you by showing where trouble may come from.

As more and more people know the symptoms of legal trouble—

where to look for legal hitches in plans, before big trouble starts, there will be fewer law suits and better human relations.

And where does trouble sometimes start? Most often where you lack a clear grasp of your relationship, your rights and duties, and your own and the other fellow's resources—in transactions involving large personal or financial stakes.

Remedy

ST. CATHERINES, Ont. (UPI)—Police traffic department inspector Frank Jarvis has a suggestion for eliminating traffic jams caused by long cars trying to fit into small metered parking spaces: Lengthen the spaces from 22 feet to 25.

Staff members of the Wildlife Conservation Board said corvina abound in the 345-square-mile inland sea but that they are difficult to catch, except near the wreckage of an old Navy piling. So old auto bodies will be used to create other such artificial reefs.

There is six times as much mountainous area in Colorado as there is in Switzerland.

Non-food items account for about 5.2 per cent of total sales in the average grocery.

NEW

the patented SIEGLER

now gives you amazing SUPER FLOOR HEAT

PATENTED built-in BLOWER!
