

A Cry for Help
In the stillness of the night is sufficiently startling. What if no aid be at hand or we know not whence the cry comes? This is not the case with that mute appeal made to the resources of medical science, ever ready, ever available by disease on every hand. A prompt means of self help for the malarious, the rheumatic, the dyspeptic, the bilious, and persons troubled with impeding kidney complaints, is to be found in Hostetter's Stomach Bitters, an ever present help in time of trouble for all such hapless individuals. They should not delay a moment in seeking its aid. Experience has shown its wide utility, the recommendation of eminent physicians everywhere sanction its use. Nervous thin, debilitated individuals gain bodily substance and vigor by a course of this fine invigorant, which is eminently serviceable, also, to the aged and convalescent.

DR. EDWARD S. LAWRENCE, of Philadelphia, committed suicide by jumping from a steamboat at Atlantic City. Curiously enough, he was a nephew of Capt. John Lawrence, whose "Don't give up the ship" made his name immortal.

SHILLON'S CONSUMPTION CURE is sold on a guarantee. It cures Incipient Consumption. It is the best Cough Cure. 25 cents, 50 cents and \$1.00.

Sarah I. Griffin.

Only a Scar Remains

Scrofula Cured—Blood Purified by Hood's Sarsaparilla
"C. I. Hood & Co., Lowell, Mass.: It is with pleasure that I send a testimonial concerning what Hood's Sarsaparilla has done for my daughter. It is a wonderful medicine, and I cannot recommend it too highly. Sarah, who is fourteen years old, has been

Afflicted with Scrofula
ever since she was one year old. For five years she has had a running sore on one side of her face. We tried every remedy recommended, but nothing did her any good until we commenced using Hood's Sarsaparilla. My married daughter advised me to use Hood's Sarsaparilla, better than any I had ever heard of.

Hood's Sarsaparilla Cures

cause it had cured her of dyspepsia. She had been troubled with that complaint since childhood, and since her cure she has never been without a bottle of Hood's Sarsaparilla in the house. We commenced using it to Sarah about one year ago, and it has conquered the running sore.

Only a Scar Remaining

as a trace of the dreadful disease. Previous to taking the medicine her eyesight was affected, but now she can see perfectly. In connection with Hood's Sarsaparilla we have Hood's Vegetable Pills, and find them the best."

MARIA GRIFFIN, Xenia, Illinois.

Hood's Pills cure nausea, sick headache, indigestion, biliousness. Sold by all druggists.

Lydia E. Pinkham's Compound

Vegetable Compound Cures

Suppressed or Painful Menstruations, Weakness of the Stomach, Indigestion, Bloating, Flooding, Nervous Prostration, Headache, General Debility, Kidney Complaints in either sex. Every time it will relieve

Backache, Faintness,
Extreme Lassitude, "don't care" and "want to be left alone" feeling, excitability, irritability, nervousness, sleeplessness, flatulency, melancholy, or the "blues." These are sure indications of Female Weakness, some derangement of the Uterus, or

Womb Troubles.

Every woman, married or single, should own and read "Woman's Beauty, Peril, Duty," an illustrated book of 30 pages, containing important information that every woman should know about herself. We send it free to any reader of this paper.

All druggists sell the Pinkham medicines. Address in confidence, LYDIA E. PINKHAM, Lowell, Mass.

Lydia E. Pinkham's Liver Pills, 25 cents.

The Greatest Medical Discovery of the Age.

KENNEDY'S MEDICAL DISCOVERY.

DONALD KENNEDY, OF ROXBURY, MASS.,

Has discovered in one of our common pasture weeds a remedy that cures every kind of Humor, from the worst Scrofula down to a common Pimple.

He has tried it on eleven hundred cases, and never failed except in two cases (both thunder humor). He has now in his possession over two hundred certificates of its value, all within twenty miles of Boston. Send postal card for book.

A benefit is always experienced from the first bottle, and a perfect cure is warranted when the right quantity is taken. When the lungs are affected it causes shooting pains, like needles passing through them; the same with the Liver or Bowels. This is caused by the ducts being stopped, and always disappears in a week after taking it. Read the label.

If the stomach is foul or bilious it will cause uneasiness feelings at first. No change of diet is necessary. Eat the best you can get, and enough of it. Dose, one tablespoonful in water at bedtime. Sold by All Druggists.

Driving the Brain

at the expense of the Body. While we drive the brain we must build up the body. Exercise, pure air—foods that make healthy flesh—refreshing sleep—these are methods. When loss of flesh, strength and nerve become apparent your physician will doubtless tell you that the quickest builder of all three is

Scott's Emulsion

of Cod Liver Oil, which not only creates flesh of and in itself, but stimulates the appetite for other foods.

How Medicine May Be Administered to Horses—A Productive White Gooseberry—Improving a Kitchen Sink—How to Grow Sugar Beets.

To Give Horses Pills.

There are comparatively few farmers and a good many so-called horse-men, who are familiar with dealing properly with sick horses, and in not a few cases more injury is done the animal in consequence of thrashing about when giving medicine than can be counteracted by its healing powers. There are certain liquid medicines that must be given in that condition, and the one administering the

GIVING A HORSE MEDICINE.

dose must use his best judgment in handling the animal. Tie their heads up as high as possible, put up boards to prevent being struck by the four feet, pour the mixture from a bottle, and hold the head high until the horse is obliged to swallow. The easiest method when the medicine is to be given as a paste, which is often the case, is to take the decided distaste which the horse has for the drug, refusing to eat it with the food.

—Is to mix the drug with bran, making a sticky mass that can be rolled into a ball. This can be more easily handled by putting around it, or rolling it in, a small piece of tissue paper. This keeps the material from the horse's tongue, and is soon dissolved when it reaches the stomach. In administering the ball it should be held between the fingers of the right hand, the first and fourth fingers being placed together under the ball, and the second and third fingers placed on the upper side of the ball. In this manner the right hand is made to take up as little room as possible, to render it easy to insert in the mouth. The person administering should take hold of the horse's tongue with the left hand, draw it gently from the mouth, placing it on that part of the lower jaw that is bare of teeth. It is a good precaution to place the tongue between the molar teeth to prevent the horse from swallowing the ball and biting the arm. The right hand holding the ball as explained, it is now inserted in the horse's mouth, as shown in the accompanying cut, and the ball deposited at the root of the tongue. The right hand is then withdrawn, the tongue released, and a small handful of hay offered to the horse at once, the head being still held up. In the movement made to eat the hay he swallows the ball, and its course down the gullet may be seen by watching the side of the neck.

The Chautauqua Gooseberry.

The white gooseberry, Chautauqua, was found several years ago growing in the shade of some plum trees. The unusual size of the berries, robust habit of bush and wonderful beauty at once attracted the attention of its finder. The late Charles Downing pronounced it a seedling of a variety of the English type. A few plants were obtained and planted on a warm gravelly loam, in the shade of an apple tree and peach orchard. A few canes were sent to the experiment station at the University of Maryland, and remained the plants were perfectly healthy and bore large crops each year. After a few years the trees were removed and the canes

then began to mildew. The mildewing of the plants discouraged their propagation. In the meantime the plants at the experiment station had been thriving and their propagation was strongly recommended in spite of the tendency to mildew. All varieties of the English type of gooseberries mildew more or less, but this defect may mostly be overcome by spraying with sulphate of potash.

The canes of this variety are vigorous, stiff, and upright, and having the usual number of thorns. It should not be planted closer than 4x6 ft. The illustration gives a fair illustration of the productiveness of the plant.

Wood Ashes as a Fertilizer.

As wood is now much less used as fuel than it formerly was, the home supply of ashes as a fertilizer is greatly deficient. It is a fact, too, that the ashes are needed now as they were not in the times when large forests had recently been cleared off and the branches piled into brush heaps and burned. In many places forests were cut down and the trees were cut into logs piled in heaps and burned. To be sure many of these ashes were gathered and saved, but large quantities were mixed by rains with the soil. Yet, within a few years after such large supplies of potash the wood ashes made by winter fires were carefully saved and applied to crops with the best results. If that was true in the early days, how much more helpful will they not be likely to prove now? Now that fruit growing is largely superseding other kinds of farming, the demand for potash for the soil is greater than it ever was before.

How to Grow Sugar Beets.

The soil should be a light loam, preferably containing some lime. The land should be well drained. The beet roots are the greater part of its food from the soil at a depth of 8 to 12 inches, hence freedom from excess of water is necessary. Plow in the fall,

As soon as the soil can be properly worked in the spring it should be plowed again, this time to a depth of 12 inches. Allow to lie until about one week before the time of seeding. Then plow once more to the depth of 4 or 5 inches and work the soil up into a fine and light condition. After allowing the land to lie five to seven days plant the seed. No manure should be applied unless in the shape of well-rotted compost put on in the fall. The rows should be 18 inches apart, in very rich soil, less; in poor soil, more. The conditions should be such that the beets cannot attain a greater weight than 2 pounds each. Seed should be planted 1/2 to 3/4 inches deep, and about 20 pounds per acre. Plant in April. Cultivate as soon as the plant shows in the row. When the beets have put out four leaves, thin them out so as to leave the plant standing about 4 to 6 inches apart in the row. The weeds should be kept down and the soil well stirred. A beet that grows up out of the soil is worthless for sugar; they must not weigh over 2 pounds each and must be smooth and tapering in shape.—Farm and Home.

Sorting the Apples.

A very little rot in a barrel of apples will in early spring soon affect the whole lot. The rot furnishes just the conditions in which injurious bacteria do the greatest harm. Taking up each apple and carefully wiping it with a dry cloth will do much to keep them in good condition, but they should at this season be wrapped in fine paper after being so to exclude the air. After this is done place the apples in the coolest place in the cellar, and, if possible, in a room where there is very little ventilation. All have noticed how rapidly apples rot after the cellar windows are opened in spring. It is necessary for health that cellars under living rooms should be kept well ventilated. This makes another reason for keeping them in fruit cellars apart from dwellings where there need be no windows opened to allow currents of out-door air to draw through.

Improving a Kitchen Sink.

The ordinary sink has insufficient shelf room, so that for washing dishes recourse is frequently had to a table

moved up to one end, on which to place dishes when they are washed. The illustration shows two separate covers hinged to the farther side of the sink, which may be let down to rest upon its front edge, the part with slats forming a dish drainer that will be appreciated every time the dishes are washed, and the other forming a solid cover which virtually converts the sink into a table when there is need of more table room. Any one at all handy with tools should be able to attach these conveniences to the kitchen sink at small expense of money, time, or labor.

Farm Notes.

A HORSEMAN claims that feeding an idle horse much corn in winter is as hard on them as overworking them in summer.

No MATTER what the harvest may be, if the farm is poorer than it was before it has been cultivated at a loss. The very principle of a successful agriculture is the maintenance of the soil.

THE kerosene emulsion will be found to be the best friend of the farmer when insects appear. Do not be afraid to use it liberally. It is cheap, and is also quickly and easily applied.

THE weights of the corn and cobs and that of the fodder grown at the same time differ but little. A crop of fifty bushels of shelled corn (with the cobs) will weigh about 3,800 pounds, and the weight of the fodder will be about the same.

VARIETY in the garden should be the rule. The seed catalogues contain many vegetables that are never grown, simply because they are not in general use, yet a year's trial with some of the novelties would establish them as regular crops afterward.

WORKOUT land requires at least two or three years for restoration, and it will cost something to bring it back to fertility. When land has been cropped for years, until it is no longer capable of producing a crop, the plant food cannot be replaced in a single season.

THERE is nothing better than corn fodder considering its cost, but sorghum is sweeter, and serves well as a change. It may be seeded down in drills, using a bushel of seed per acre. Cattle are very partial to it, and consume the whole stock when it has been cut before becoming too dry.

WHEAT is no nuisance on the farm worse than a muddy barnyard. It is not possible to give stock any proper care when one must wade knee deep in mud to do it, nor are cattle well off when compelled to spend any portion of their time standing amid such filth. Stock keeping will always be unprofitable in such conditions.

HART has much to do with success on the farm. Some farmers are Bourbons, who learn nothing, but adhere to old methods, forgetting that the world has progressed, and agriculture revolutionized, while they have followed the same course marked out by their fathers in the decades gone by.

ANALYSIS of soils proves nothing, as no two square feet of ground will give the same results. A shovel full of manure, placed on a spot five years ago, may cause that portion of the field to give different results than a portion but a few feet away. The best way to test land is by observation of the effects of manures on fertilizers on different crops.

Economy

requires that in all receipts calling for

baking powder, Royal Baking Powder

shall be used. It will go further

and make the food lighter, sweeter,

of finer flavor and more wholesome.

ROYAL BAKING POWDER CO., 106 WALL ST., NEW-YORK.

Warfare and Insurance Rates.

When military or naval officers were, in days gone by, ordered on active service the extra premium demanded by the insurance offices was a very serious consideration. As instances of the sums demanded, Gen. Henry Brackenbury had to pay £21 for every £100 insured at the outbreak of the Ashantee war, and Sir Garnet Wolseley had to pay £25 for every £100. These war risks were not then based upon any known statistics, but elaborate calculations have since been gone into as to the risks of officers from a life insurance point of view, and the board of the Greenham have adopted a set of premium rates within easy reach of officers. For instance, in the case of "a whole world of war policy," covering risks of climate and warfare, an officer aged 50 would pay but 2s. 8d. per £100 more than a civilian, and one aged 45 would pay only 2s. 6d. per £100 more, the latter sum being due to the probability of his retiring from active service between the ages of 50 and 55, when the special risks incidental to his profession are no longer operative.—London World.

Is Life Short or Long?

If life is so short, as many think it is, it may be made to seem much longer and sweeter by a better care for our comforts. Minor troubles are much magnified by neglect and delay. We give too much time to hunting up causes when we ought to deal promptly with effects. This is much the case with pain, which should be cured at once and cause looked into afterwards. Miss Ida M. Fleming, 7 S. Carey St., Baltimore, Md., states that for years she was subject to frequent attacks of neuralgia, and tried any number of remedies without avail. She was given quinine, which she says affected her nervous system. She suffered night and day during these attacks until she tried St. Jacobs Oil, which finally cured her.

MUCH attention in scientific circles has been attracted by a lecture delivered recently before the five Academies, by G. M. Jansen, on the "Solar Atmosphere." He affirmed that oxygen is entirely absent from the great luminary. He said that the radiating surface is protected by several gaseous envelopes, the outermost and most effective of which is hydrogen. His discoveries prove, he says, that the present relations of the sun to the planets will continue during many aeons, during which the outer planets may evolve into the earth's condition of development.

EARLY CORN OVER 1 FOOT LONG.

Salzer illustrates in a colored plate a new early corn, a plant of its kind, and offers \$800 in gold for the largest ear in 1894. In addition to this early Giant corn, which yielded in 1893 110 bushels per acre, he has over twenty other prolific field corns. He has the best fodder corn in the world. He is the largest grower of farm seeds, such as oats, barley, wheat, millet, potatoes, etc., in America. Fifty kinds of grasses and clovers.

You Will Cut This Out and Send It With Us to the John A. Salzer Seed Co., La Crosse, Wis., who will receive a large package of above Giant corn and his mammoth catalogue.

MULHALL estimates that from 1801 to 1888 the world has produced 12,700,000 tons of mineral, of which 10,100,000 tons were coal, 1,275,000 tons of iron, 612,000 tons of gold, 49,000 tons of silver ore, 85,000 tons of copper, and 30,000 tons of lead ore.

DEATH OF OHIO, CITY OF TOLEDO, La. LOCAL COUNTY.

FRANK J. CHENEY makes oath that he is the senior partner of the firm of F. J. CHENEY & Co., of the City of Toledo, Ohio, and State of Ohio, and that said firm will pay the sum of ONE HUNDRED DOLLARS for the largest ear of CORN that can be raised in the county of Lucas, Ohio, in 1894, to be raised by the use of HALL'S CATHARTIC CURE.

Sworn to before me and subscribed in my presence, this 6th day of December, A. D. 1894.

A. W. GILBERT, Notary Public.

Hall's Cathartic Cure is taken internally, and acts directly on the blood and mucous surfaces of the system. Send for testimonials, free.
