Thanksgiving.

Thanksgiving Day, Thursday, November 28th.

At a called meeting of the Rensselaer pastors, Monday morning, Nov. 11th, it was resolved to hold union Thanksgiving services in the Missionary Baptist church at 10:30 a.m. Sermon by Rev. J. H. Brady; alternate, Rev. C. E. Voliva.

Warner, son of W. S. Smoot, a former resident of Rensselaer, is visiting relatives and friends in this locality.

Governor Matthews has pardoned James Rodgers from the northern prison, which act of clemency meets general approval here.

Seymour, only son of Governor Matthews, died Thursday evening of last week, at Atlanta, of typhoid fever, aged about 24 years. Gov. Matthews and family have the sympathy of the people in the sad bereavement.

Minister Bavad, in a recent address, gave utterance to some wholesome truths concerning the policy of the republican party, and our neighbor of the Republic can is hot over it.

Geo. H. Healy, a former Rensselaer boy, is visiting his mother and friends in this locality.

Mr. and Mrs. G. K. Hollingsworth will visit the Atlanta exposition.

J. R. Farris, of the firm of Farris, Beck & Co., Chicago, is canvassing for a wall map of Jasper county. It will be printed in colors, contain the names of farm owners, etc., etc., and will no doubt prove a very valuable publication.

**Small in Size, but Big in Price.**  
In a glass case at the Academy of Natural History in Philadelphia is an egg little smaller than a goose egg. It is dark olive green in color, with black spots. This is the egg of the great auk, a species of bird which belongs to Iceland and has not been seen in fifty years. In the same case with the egg is a great auk mounted, and it and the egg are valued at \$3,000. An auk egg was sold in London years ago for \$1,500.

**A Span of Oats in Harness.**  
A French boy has driven two black horses to harness. He drives his pets in single as well as double harness up and down the streets every day.

**A Good Friend in the Closet** R. CUMMINS & CO.

**Whiskey**

Sold only by druggists. Each bottle bears the certificate of Professor J. N. Hurley, Chemist, Indianapolis, as to purity and medicinal value.

A. KIEFER DRUG CO.

REFLECTED HER PROFESSION.

Her Dress and Hair Betrayed that She Was a Schoolma'am.

"How unconsciously men and women take on the atmosphere of their surroundings and avocations," remarked a man recently to a New York Advertiser reporter. "I can recall an illustration of that fact in an experience I had some years ago. I had been so long accustomed to the association of women school teachers that I am rarely mistaken when I come in contact with one. A prominent woman teacher from a northern city was expected at an educational meeting. I had never seen her, but received a telegram asking me to meet her at the train. I was sure I would be able to identify her. I went through the train, which was crowded with passengers. I looked around and soon found the teacher. She was perfectly astonished when I came up and said: 'Is this Miss Blank?'

"Yes, that is my name," she replied, "but how did you know me?"

"I did not explain, but it was easy enough. At first glance I saw her hair was short, that she wore eye-glasses and had on a plain-looking sort of gray cloth dress. Any doubts I might have had were soon relieved as I noticed hanging from her watch fob a small globe, being a miniature of the earth. Another earmark was a small hand satchel that snapped loudly when she closed it. I knew I could not be mistaken, and results showed I correctly diagnosed the profession of that woman."

Salaries of the World's Rulers.

The President of the United States receives a salary of \$50,000 and a house; the Emperor of Austria and King of Hungary gets \$3,875,000, besides several palaces; the King of Italy gets \$2,858,000; the King of Prussia gets \$2,857,770, but nothing as Emperor of Germany; the Czar has an income of \$12,000,000, out of which he supports the great dukes and the court; the King of Spain gets \$1,400,000; the Queen of Great Britain and Ireland, \$2,175,000; the President of France gets \$120,000, and a like sum for entertainments; the President of Mexico gets \$50,000; the Emperor of Japan gets \$3,000,000; and no one knows what the Emperor of China gets. The King of Greece gets \$260,000, and the President of the Swiss Confederation has a salary of \$3,000. This last named ruler is the only one who does not receive the use of a house.

INDIANA'S PROGRESS

THE TIME FOR FITTINGLY EXHIBITING IT TO THE WORLD.

**Hon. Chas. L. Jewett Says the Proposed Centennial Should Be on a Scale of Great Magnificence—Commissioner McCulloch Thinks It Should Have Permanent Features.**

Hon. Chas. L. Jewett, of New Albany, one of the members of the Indiana Centennial commission, is an enthusiastic advocate of a celebration which will rank among the most memorable. He says:

"The suggestion of a fitting celebration of the 100th anniversary of Indiana territory will surely awaken the liveliest interest among our citizens. A native of Indiana, as was my mother before me, I regard it with positive enthusiasm."

"As yet the movement is of course merely an aspiration. It represents the yearning of many of our people to assert before the world the honorable history, splendid progress and real worth of our noble state."

"The matchless resources of our territory, the marvelous progress in their development, the distinguished achievements of our men and women in every field of honorable endeavor, the history, art, science and literature of the state afford ample material out of which we may erect a wonderful exposition of the whole."

"Avoiding all wasteful extravagance, the celebration should be on the scale of magnificence, befitting our position among the states of the union."

"It should be purely an Indiana affair. It should be assertive and audacious. It should be conceived in a spirit of unselfishness and patriotic liberality, and carried forward with a passionate desire to truly exhibit to our countrymen the present greatness and glorious possibilities of Indiana."

THE LESSON OF EXPOSITIONS.

Hon. Chas. McCulloch of Ft. Wayne, one of the centennial commissioners, gives his views concerning the importance of a great state celebration in the year 1900, as follows:

"Expositions, or exhibitions, whether of a national, international, state or local character, are certainly the most interesting features in the industrial records of the world and are being recognized as the most important to civilization and of the diffusion of knowledge. They are hardly a century old, and were first established in France under the direction of that most wonderful of men in many other respects than a soldier, the first Napoleon."

"It is that, more than has been accomplished in the last century by the human race in education, art, science and all that is elevating, than in the whole prior history of the world. After France had set the example England, Germany, Austria and then the United States gave similar displays, each improving on the last, until the Columbian exposition astonished the world by its magnitude and beauty, its crowning exhibit of the work of human minds and hands to the present time."

"All these great expositions, it is said to consider, have been of a transitory

character, to be enjoyed only by those who were able to visit them within a brief space of time, and with a few exceptions, the places that knew them, know them no more. Millions upon millions of money has been wasted on buildings that in less than a year's time were destroyed. It seems to me that this is a wanton waste of time and material and calculated to teach waste and extravagance rather than economy and substantiality. It certainly must have occurred to the minds of thousands, as it did to me, that if those great palaces of industry of Chicago had been built in a substantial manner and were being kept in perfect condition by even the state of Illinois, what an attraction to the state it would be and what a school of education to each generation!"

"A feeling of sadness and regret is experienced by every one when they think that the great Columbian exposition was merely a dream; that within two short years it was created and destroyed. If it is decided to hold a centennial exhibition within the borders of Indiana in the year 1900, I hope that some of the important buildings and features of it may be of a permanent character, where can be kept on exhibition the work of each year of improvement, so that it can be a monument to the skill and enterprise of the present generation, as well as an example for our successors to emulate and improve upon."

INDIANA'S ADVANTAGEOUS POSITION.

"Indiana is not only one of the contractors of the Union, but is in strict geographical location the central place. She is so situated between the great lakes and the Ohio river that all the important highways of commerce must cross her domain. On each side of her, east and west, is the country that in time will support the most thickly settled population in the world. Already are the great railroad lines so permanently established, and are the great cities of this continent so located, and are the richest lands, mines and quarries so improved, that for centuries to come Indiana will be the center of the wealth and business of the continent. Her territory of 275 miles in length and 135 miles in breadth and of nearly 34,000 square miles has got to be crossed by the great bulk of those who travel from the east to the west. Fortunate and prominent as we are in location to the greatest extent are we in valuable possession in climate and soil. Our state is level, having no difficult mountain ranges to overcome, our coal measures cover an area of 7,000 square miles, our climate is healthful and our soil adapted to the cultivation of all the crops that are the most useful to civilized man. The discovery of natural gas and oil have, within a few years, so stimulated all kinds of manufacturing, that we will soon rank among the first of manufacturing states."

"One hundred years ago the Indian tribes almost reigned supreme in the forests and on the prairies of Indiana. Within the recollection of those who have lived only 50 years in the state has all this wonderful improvement been virtually made. When my father, the late Hon. H. H. McCulloch, came into the state in 1831, the state was almost a wilderness. He had to wade or swim the streams, follow trails through the woods and sleep at night in log houses or by campfires. For nearly 30 years, as director of the State Bank of Indiana, he rode on horseback four times a year from Fort Wayne to Indianapolis, and I frequently made the trip with him when in a carriage."

"Compare this mode of travel to the palace car rushing through in a thousand different directions at a rate of 40 miles an hour. Surely, in her centennial year, not as a state, but from territorial organization, she has reason to celebrate and to do it in a manner befitting her most wonderful development. I hope state pride may partake of the enthusiasm of city pride, that was recently manifested in Fort Wayne, and that all her citizens may help to make the Indiana centennial celebration one of the most beautiful that has ever been given by any nation, state or city, and that a degree of durability and permanence may be associated with it, that may make it remembered and enjoyed by successive generations for ages to come."

**Mysterious Submarine Currents.**  
Little Shuswap lake is stated to have a flat bottom, with a depth varying from fifty-eight to seventy-four feet, measured from the mean high water mark. The deepest water found in the Great Shuswap was 555 feet, about six miles northward from Cinnemousen narrows in Seymour arm, though the whole lake is notably deep. Adam's lake, however, exceeds either of the Shuswaps, as its average depth for twenty miles is upward of 1,100 feet, and at one point a depth of 1,900 feet was recorded. In the northwest corner of this lake, at a depth of 1,118 feet, the purpose of the scientific explorers was defeated by the presence of mysterious currents, which played with the sounding line like some giant fish, and prevented any measurement being taken. It is a complete mystery how the currents could have been created at this depth, and scientific curiosity will no doubt impel either public or private enterprise to send a second expedition to the scene this summer to endeavor to solve the riddle.

As the height of the surface of this lake is 1,380 feet above the sea level, its present bed, therefore, is only 190 feet above the sea, although distant 200 miles from the nearest part of the ocean. Dr. Dawson and his associates believe that the beds of some of the mountain lakes in the region are many feet lower than the sea level.—Vancouver World.

THE LESSON OF EXPOSITIONS.

Hon. Chas. McCulloch of Ft. Wayne, one of the centennial commissioners, gives his views concerning the importance of a great state celebration in the year 1900, as follows:

"Expositions, or exhibitions, whether of a national, international, state or local character, are certainly the most interesting features in the industrial records of the world and are being recognized as the most important to civilization and of the diffusion of knowledge.
