THE UNIVERSAL CAR

THIS COUNTRY IS GETTING BACK TO PRE-WAR conditions and the farmer who wants to make money in the future will have to cut the production cost per bushel of his products. To do this he must increase his own capacity and dispose of all excess animal power. The farm is a factory and will pay dividends on modern labor-saving machinery the same as any other factory. Farmers who have kept costs on tractor and horse farming have invariably found that the FORDSON and ASSOCIATED IMPLEMENTS will return a large profit over horses even though the grain fed to horses be at the present low market level. THE CENTRAL SALES CO., of Rensselaer, sewed approximately forty acres of rye this fall using a FORDSON exclusively for power at the following cost per acre:

The ground was plowed, culti-packed, and drilled.	
Total Kerosene, 110 gal. at 23c	\$25.30
Total Gasoline, 5 gal. at 30c	1.50
Total Motor oil, 8 gal. at 90c	7.20
Total Trans. oil, 2 gal. at 80c	1.60
Total Man hours, 97 hours, at 40c	38.80
Total	\$74.40
Depreciation, interest, upkeep	56.67
Total	\$131.07

Which equals \$3.27 per acre.

ILLINOIS MOTORIST THICK IN LOS ANGELES, CALIF.

Chas. P. Root, Field Secretary of the Chicago Motor Club says:

Every day in Los Angeles now, a person can see six or eight motor cars with Illinois license plates thereon and it is the habit for one driver to hail another with "Hello, Illinois." If anybody were to stand for an hour on Broadway, in Los Angeles, he would not fail to see a Chicago Motor Club emblem on the radiator of a visiting Illinois car; they are thick even 3,000 miles from home.

Some electric washers lift and dip the soiled fabric in a tub of sudsy water—and it is a good method.

Other electric washers rock and toss the soiled fabric in and fro in sudsy water—and it is a good method.

The A B C Electric Laundress does both. Rapidly it alternates these good methods—and so it combines their advantages.

This Ends Discussion!

If you have been looking at electric washers your mind is muddled concerning whether the lifting and dipping method or the rocking and tossing method is preferable. In fact, both are good. Why not get an A B C Electric Laundress that uses both methods—and so ends discussion?
