

# The Choice of Men Who Know Mechanical Excellence—Marmon 34

Nothing that could be said by the builders of the Marmon 34 could afford more convincing evidence of its mechanical excellence than the fact that so many men of prominence in automotive and mechanical industries have chosen it as the car they prefer to drive. It has fittingly been called "The Engineer's Car."

These men are careful, experienced buyers. They know fine machinery. They know motor car values. Through theoretical knowledge and long practical experience, they are qualified to judge accurately basic excellence of design, fineness of machining, superiority of performance.

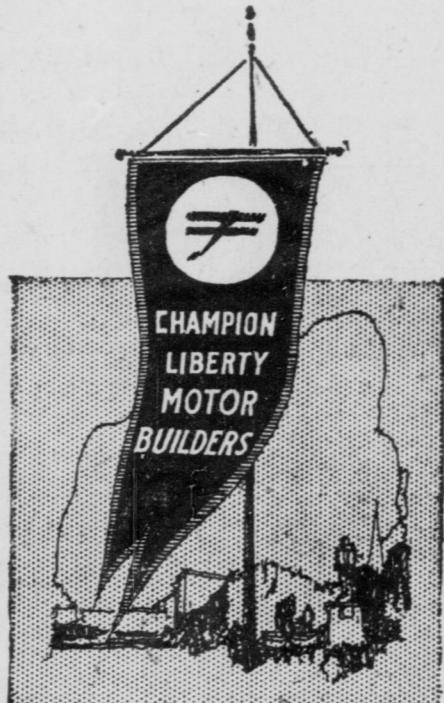

And it is a significant fact that so many of these men, familiar with every other high-grade car manufactured, have purchased for their personal use the Marmon 34.

These, for instance, are a few of the men of this class who drive Marmons:

The highest honor conferred on any industrial organization during the war was the award of the Champion Liberty Motor Builders' Pennant to the workers of Nordyke & Marmon Company. Awarded for October, 1918, Competition. Permanently awarded Nov. 16.

Those who do not know fine machinery as these men know it—who have not had their exceptional opportunities for studying the comparative merits and values of all the different high-grade motor cars—can safely place a great deal of confidence in their judgment.
