### GIVES ADVICE FOR TREATING TREE INJURIES

Methods of Preserving Shade Timber Given by City Expert.

It is Indianapolis to preserve the beauty of her many tree bordered streets, care must be taken not to neglect injuries to shade timber. George E. Morgan, head of the special service of the city park department warns in a bulletin on "Tree Surgery," made public today.

The bulletin is as follows:

"The best and most economical plan to prevent future decay is to treat the tree if it appears especially if the tree is a valued one.

"In tree surgery there are a few fundamental principles that should be observed to secure permanently good results.

"Remove all dead, decayed or diseased and injured wood.

"Sterilize and waterproof all cut surfaces.

"Leave all work in the most favorable condition for rapid healing, this often means the filling or covering of deep cavities.

"Watch the work from year to year and if any defects should appear they should be tended to immediately.

"In instances where neglect has been the cause of considerable decay it may become necessary for some cavity filling to be done; in such case only an experienced man thoroughly familiar in all the work should be employed.

"In cavity filling the value of the tree should be carefully considered; if the specimen is a rapid-growing short-lived tree it is hardly worth the time and money spent in an endeavor to save it, but rather be taken out completely and replaced with an approved variety.

"In any event a diseased or insect-infested tree should not be allowed to remain as a menace to other trees which are in a more healthy condition.

"In cavity filling proper primary steps are to remove all the decayed and dead wood, cutting back to the live, vigorous tissue. The exposed surfaces should then be sterilized; in sterilizing care should be taken not to touch the cambium or growing layer as it is such sensitive nature that injury would result.

"In cavity filling proper secondary steps are to waterproof by being given an application of XXX Asphaltum. In making the cavity care should be exercised so as to not make it any larger than necessary.

"A good example of extensive tree surgery work in Indianapolis may be seen in front of the Board of Education.

At this place extensive cavity filling has been resorted to and shows what may be accomplished in the way of saving trees.

"Those citizens who are desirous of receiving information relative to this or any other forestry problem are urged to consult the special service department of public parks."

days before the primary election is held by some legal authorities to effectively bar the entrance of any other candidates at this time. Others, however, contend that this merely bars candidates who are "independents" or who were defeated candidates from being listed on the primary ballot, and does not prohibit the formation of an entirely new party and the entrance of an entirely new ticket.

Investigators, under the direction of the anti-tuberculosis organization, have spent the last week gathering data on the work of the public health department in the city, and have made a report to the tuberculosis association, in which he quotes janitors and other officials of the downtown district as being in a constant state of dirtiness and filth.
