

MONEY MUDDLE BACK TO UNCLE SAM TO SOLVE

England Wants Us to Attend
Another Supreme Council
Session.

By United Press
LONDON, July 12.—Europe, with her financial muddle moving toward a crisis, beckoned to America today. England plans to feel Washington out on the matter of participating in the next meeting of the allied supreme council, where attempts will be made to untangle the European financial maze.

Following the conference between Lloyd George and Poincare in London, called by the British premier to discuss the situation arising from the German demand for a moratorium, there will be a meeting of the supreme council.

England is of the opinion that there is a possibility of American participation in European councils once the German reparations problem is decided.

French Are Opposed
By United Press
PARIS, July 12.—Strong French opposition to a three-year's cash moratorium for Germany, which has been informally agreed upon by Great Britain, Italy and Belgium, was believed certain today.

John Bradbury, representative of Great Britain on the allied reparations commission, made the proposal at an unofficial meeting of the commission. Italy and Belgium immediately agreed. This led to vigorous protest from Dubois, the French member.

On the plea of Dubois, definite action was postponed. The Frenchman left hurriedly for a conference with Premier Poincare.

In addition to agreement on the three-year's moratorium, Great Britain, Italy and Belgium informally decided upon an important reduction in payment in kind.

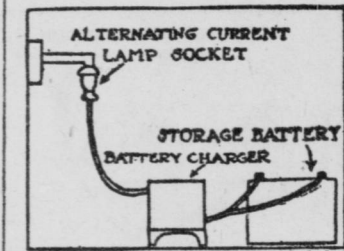

Charge Radio Batteries by Use of A. C. Rectifier

By PAUL F. GODLEY,
America's Foremost Radio Authority.

Charge your own radio set storage battery and save money.

To most amateurs this problem of caring for the storage battery seems more formidable than it really is. Common practice has decreed the use of an alternating current supply for power and light purposes. This type of current is not continuous. It flows in one direction, dies out, reverses itself and then flows in the opposite direction. In the modern commercial system these reversals usually occur from twenty-six to sixty times a second.

There is no ready method whereby the vacuum tube of the radio set may depend directly upon the commercial alternating current lighting system for its supply. The changes in current direction take place at a rate of speed which makes an audible tone.

"STORING" CURRENT FOR VACUUM TUBE.

These effects are of such intensity as completely to drown out even the strong incoming radio signals. Eventually, suitable appliances will be devised to make this alternating current available for use in the tube detector. But they haven't been developed yet.

Filters
Vacuum tubes may be supplied now with some success from lighting systems using "direct" or continuous current. Such systems are usually used in large buildings, hotels, and on board ship.

But to use even this source of current requires a "filtering" in order that any irregularities in its character—any minute risings and fallings—may be smoothed out before the current is ready for consumption by the tube. These filters are rather cumbersome and have not yet become popular.

Today, standard practice calls for the use of a storage battery or "accumulator." Most persons are familiar with this device because there is one on every modern automobile. And most users of the storage cells depend upon their garage men for recharging and conditioning them. That is expensive and often inconvenient.

Recharging
To recharge one's own radio battery is a comparatively simple matter.

There are several economical "rectifiers" on the market. To the consistent user of the vacuum tube outfit, the device will soon pay for itself.

To recharge the battery it is only necessary to get one of these, connect it to a light socket, turn on the current, and attach a pair of "clips" to the battery.

Prices of battery chargers suitable for home use range from about \$12 to \$18.

Until more convenient methods for vacuum tube supply are perfected, the use of such rectifiers will prove most economical.

Distribution Service and Agriculture

OVER 10 great agricultural states of the Middle West, the far-flung distribution system of the Standard Oil Company (Indiana) is rendering an essential service to 30 million people.

The immense value of this service may be visualized when it is known that more than one-half of the farms in the states served are equipped with automobiles. The Census Bureau report on this point is as follows:

Indiana	46.4%
Illinois	53.0%
Michigan	40.2%
Wisconsin	49.6%
Minnesota	57.1%
Iowa	73.1%
Missouri	31.0%
North Dakota	56.7%
South Dakota	69.4%
Kansas	62.0%
Average	53.8%
Average for U. S.	30.7%

In other words, the need for gasoline and lubricants, in percentage per farm, in the states served by the Standard Oil Company (Indiana) is nearly twice that of the United States as a whole.

On the farm, petroleum products are an absolute necessity. The farmer is preoccupied with his task—the mighty task of raising food for the world. He must have petroleum products when and where he needs them.

The Standard Oil Company (Indiana) is prepared to give a dependable, always-on-the-job service which the exigencies of farming demand. 6600 tank wagons are in operation this summer of 1922. These tank wagons make deliveries to the farmer's door. When necessary they serve him in the field—at his work. They reach him at dependable intervals and serve him with dependable products. Only a vast, centrally administered organization could render this effective type of service.

HOT WIRE AMMETER—Instrument used in radio transmission for measuring the current in amperes by means of a wire that expands in proportion to the heat caused by its resistance to the current passing through it.

HOLD-UP ATTEMPT FAILS

Mrs. Albert Kennedy's Screams Thwart Effort.
Mrs. Albert Kennedy, 1848 Lexington Ave., was the victim of an attempted hold-up as she reached an alley near Woodlawn Ave. and State Ave. She screamed and the hold-up man. The police failed to find him.

CONTROL OF COAL INDUSTRY

Two Plans Before Congress Aside From Harding's.

By United Press
WASHINGTON, July 12.—Government control of the coal industry to protect the public during clashes between miners and operators was planned today, no matter what results are accomplished by President Harding.

One plan would throw the control of coal mining into the hands of either the Senate Labor Committee or a joint committee of the House and Senate.

Another would embody the regulatory features of a bill introduced several months ago by Senator Frelinghuysen, New Jersey. This bill was withdrawn at the time because of a storm of opposition.

Fire Chief To Speak

A fire prevention meeting will be held tonight at Engine House No. 30, New Jersey and South Sts. Fire Chief J. J. O'Brien and Jacob Reidel will address the members of the department and residents of the neighborhood. George Oakes, chauffeur for Squad No. 2, will sing. Motion pictures will be shown.

Sell Company's Assets

Assets of the Electric Steel Company of Indiana were sold to John W. McGinety, secretary of the American Mutual Insurance Company, for \$14,000 in Superior Court, room 5, yesterday. The sale was approved by Judge Solon J. Carter. The company will be reorganized and claims amounting to \$71,829 will be satisfied.

Leases Ward Property.

Dr. Carleton B. McCulloch has purchased a ninety-nine-year lease on the Marion and Mary L. Ward property, near Michigan and Delaware Sts., for \$185,500. Dr. McCulloch also holds the lease to the John Oliver site next to the Ward property.

Reports Auto Stolen

Alvin Ostermeyer, 2553 Broadway, reported his automobile stolen from Meridian and Ohio Sts. last night.
