

WOMEN OFFICERS TO AID IN SEARCH FOR MISSING GIRL

Father and Friends of Frances Webb Start Visits to Factories.

Women Detectives Rodgers and Rupert have been assigned to assist in the search for Frances Vinnie Webb, 16, of 420 N. Emerson Ave., missing thirty-five days.

These two detectives have met with remarkable success in locating other missing girls.

Len S. Webb, father of the missing girl, and friends, Wednesday started a series of visits to stores and factories where girls are employed.

Many clues have been investigated during the last few days. Indianapolis Times readers have taken an interest in the search and messages received at the Webb home and by the city editor of The Times have proved important. Webb said today that he hoped persons giving information would, as far as possible give exact street numbers.

An investigation of two reports that Miss Webb has been seen in S. Emerson Ave., and also in S. Keystone Ave., proved to be false clues.

MRS. EARLS TELLS WOMEN

How Backache and Periodic Pains Yield to Lydia E. Pinkham's Vegetable Compound

Olean, N. Y.—"Every month my blood would go to my head and I would have such a headache, nose-bleed, backache and pains that I could not do my work. At night I could not get my rest and nothing seemed to do me any good. I read some of your testimonial about what Lydia E. Pinkham's Vegetable Compound had done for others, so I decided to try it. I had only taken two bottles when I began to feel better, and my back did not hurt me nor my head ache. I felt like a new woman. The Vegetable Compound is a splendid medicine and I will always recommend it."—Mrs. A. D. EARLS, 530 N. 5th St., Olean, N. Y.

Mrs. Kelsey Adds Her Testimony
Copenhagen, N. Y.—"I read your advertisement in the papers and my husband induced me to take Lydia E. Pinkham's Vegetable Compound to get relief from pains and weakness. I was so weak that I could not walk at times. Now I can do my housework and help my husband out doors, too. I am willing for you to publish this letter."—Mrs. HERBERT KELSEY, R.F.D., Copenhagen, N. Y.

LIONS CLUB BACKS KIDS

Like Looking at the Sun

If you were to look into one of the great rotary kilns in a cement mill, you would see only a glare of light so intense that it would be like looking at the noon-day sun. For a few moments after, you would be unable to see anything.

But borrow the workman's colored goggles to protect your eyes, and peer through the peep-hole again. Then you will see a tornado of powdered coal—or gas or spraying oil—bursting into a sheet of sun-white flame. Into the other end of the kiln flow the finely ground limestone and clay—the materials for cement.

In their three-hour journey through this inferno, the materials undergo many changes. Moisture and gases are driven off as the rotation of the kiln tumbles the materials about, subjecting them to gradually increasing heat until the sun-white flame half melts the powder and it rolls into glass-hard clinker. This clinker, an entirely new chemical compound, when pulverized becomes portland cement.

Scientific control marks every stage of the burning process. Producing the required 2,500 to 3,000 degrees Fahrenheit of heat consumes great quantities of fuel—30 pounds of coal, or its equivalent, for each 94-pound sack of cement.

For the whole cement-making process, the consumption of coal is approximately 50 pounds a sack—more than half a ton of coal to a ton of cement.
