# PESKY BED BUGS

Bedbugs lay an average of seven eggs per day. Under favorable conditions they hatch in five days of which two-thirds are females. They mature to adult size and are capable of laying in four weeks. How many bedbugs would you have in a year if you left one female or egg unmolested for one year?

To rid the pesky bedbug, you readily see how necessary it is to use a preparation that will kill the eggs as well as the live ones.

P. D. Q. has been demonstrated by the leading Hospitals, Hotels and Railroad Companies that the safest and most economical way to stop future generations of bedbugs, roaches, fleas and ants is to use the new discovery Pesky Devils Quietus "P. D. Q."

A 35c package of P. D. Q. makes a quart, enough to kill a million bedbugs, roaches, fleas and cooties and at the same time destroy their eggs.

Impossible for them to exist when P. D. Q. is properly used. Free a patent spout in every package to get the pesky devils in the hard-to-get-at places and save the juice.

P. D. Q. is not an insect powder, no mess or dust, does not rot or burn the bedding.

P. D. Q. for family use 35c. Hospital size $2.50 makes five gallons. P. D. Q. can also be purchased in sealed bottles, double strength, liquid form.

Genuine P. D. Q. is never peddled.
