How Many of Your Fuel Dollars Go Up The Chimney

WHEN you burn coal in a household furnace only a fraction of the heat in the smoke goes toward heating your house. If you obtained all of the heat in the smoke it would not exist, for smoke indicates imperfect combustion—and that is waste pure and simple—dollars gone for nothing.

ON the other hand, when you burn Indianapolis By-Product Coke there is no smoke, for all of it has been removed in the coking process. Coke is practically pure carbon, the real heat element in any solid fuel used in household furnaces.

AND when you burn our coke you and your helpmate are relieved of the age-old furnace drudgery connected with the burning of coal, and its dirt, smoke and soot. The thousands of families in Indianapolis who have been burning coke for years know what real fuel satisfaction means, for they enjoy the economy of clean heat.

WHY not order a ton of Indianapolis By-Product Coke today, and as soon as it is delivered call Main 2541 and ask for Coke Service. Our fuel expert will come out and assist you in getting started right. Whatever time is convenient for you will be convenient for him.
