

REPORT UPON ROCKS MADE BY GEOLOGIST

Logan Gives Results of
Survey in Gibson and
Knox Counties.

As a part of this summer's field work a survey of geological conditions was made in western Gibson and southwestern Knox counties by Dr. W. N. Logan, State geologist, and staff, the results, of benefit to quarrymen, gas, oil and coal operators, being set forth in the following report to the State conservation commission.

"In the Wabash River Valley the bed-rock formations are concealed by an alluvial and glacial covering of sand and gravel of approximately 100 feet. The higher lands on the sides of the valley have a more or less attenuated covering of loess, also of glacial origin. Beneath these formations there are about 1,000 to 1,100 feet of sandstones, shales and coals, sometimes with thin limestones, of the Pennsylvanian age.

"The Pottsville, Allegheny and post-Allegheny divisions of the Pennsylvanian are present with their sub-divisions. In Gibson and Pike counties two of the Pottsville sub-divisions, the Mansfield and the Brazil have yielded some petroleum and natural gas. In the Allegheny field in Illinois the Bridgeport and the Buchanan sands are in the lower Pennsylvanian. In Indiana the West Princeton, the Davidson shallow, the McRoberts and the Monroe City gas sands belong to the Pennsylvanian.

"The rocks which underlie the Pennsylvanian rocks in this region are of Mississippian age. The uppermost formations reached by the drill belong to the Chester series of the Mississippian. The following Chester formations will probably be encountered by the drill in the area under discussion:

"Pennsylvania strata, Negli Creek limestone and shale, twenty feet; Mt. Pleasant sandstone and shale, forty-five feet; Bristow sandstone and shale, seventy-five feet; Siberia limestone, two feet; Wickliff shale and sandstone, forty-eight feet. Tar Springs sandstone and shale eighty feet; Glen Dean limestone, fifteen feet; Hardinburg sandstone and shale, seventy-five feet; Golconda limestone, twelve feet.

"Indian Springs shale, sandstone, thirty-three feet; Cypress sandstone, sixty feet; Beech Creek limestone and shale, nineteen feet; Elwren shale, thirty-six feet; Reelsville limestone, fifteen feet; Sample shale, twenty-eight feet; Beaver Bend limestone and sandstone, ten feet; Mooretown sandstone and shale, eighty feet; Paoli limestone, shales and sandstone, fifty feet; Fredonia oolite, fifty feet.

CHILD DESERTERS TAKE SANTA ROLE

Men Convicted of Failure to Provide for Families Don't
Forget Christmas, Probation Clerk Says.

Men who are convicted of wife and child desertion before Judge James A. Collins but are permitted to go on probation seldom break their promise to provide for their dependents, according to Miss Jean Brown, Criminal Court probation clerk.

At Christmas time most of the fathers and former husbands send double allowances to Miss Brown,

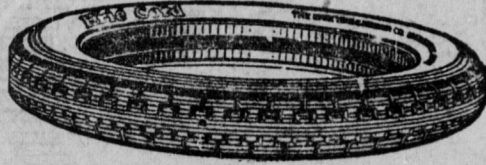

mas gifts for the kiddies," the letter instructed.

One woman, the wife of a man whose divorced wife and children live here, sent money gifts to be used for her husband's children. "It is only a small amount, I know, but when you realize it took all my week's wages you will understand it is the best I can do," the woman said.

MANY AUTOS STOLEN

The present year probably will set a record for the number of automobiles stolen in Los Angeles, according to Walter Wood, head of the theft department of the Automobile Club of Southern California. While the number of cars stolen has been greater, there is also a larger number being recovered. It is expected that the recoveries will run 78 per cent this year.
