

HOOVER FACES CRITICAL TEST IN THREE PRIMARIES

WAGES FIGHT IN PIVOTAL STATES FOR DELEGATES

Expects to Win 90 of 169 in Pennsylvania, Ohio, Massachusetts.

OHIO CONTEST VITAL

Measures Strength Tuesday With Whole Field of Rivals.

By Ray Tucker.
WASHINGTON, April 23.—Herbert Hoover will meet several stern tests in Tuesday's primaries in the pivotal States of Ohio, Pennsylvania and Massachusetts. With 169 delegates involved Hoover seems sure of ninety, but hopes to pick up many more.

The Ohio primary is all-important at this stage, for here Hoover is facing his whole field of rivals, including Lowden, Curtis, Watson and Dawes. If he can defeat that alliance he will definitely prove his vote-getting qualities and popularity with the people.

Though Dawes is not an avowed candidate, it is admitted that the Ohio primary has developed into a battle between Hoover and the Vice President.

Will Settle Draft Issue

In Massachusetts Hoover will face the dwindling group, which, despite Coolidge's fourth sharp warning, still hopes to force him into the race. This faction is headed by William M. Butler, G. O. P. chairman.

The result may determine whether Coolidge's letter forbidding use of his name in the primary has had the effect intended, or whether his home people think the President has not yet said "I will not run."

If thousands write in Coolidge's name on stickers, the anti-Hoover politicians will continue their clamor for Coolidge. If not, the die hard army may suffer from wholesale desertions to the Hoover camp. There are no contests in the Pennsylvania affair, but the personnel of the seven-nine delegates will reveal what chance Hoover has of getting a large vote from this State at Kansas City.

Mellon Non-Committal

Mellon still remains non-committal, and in that respect has given aid and comfort to the anti-Hoover forces headed by Charles D. Hillis, New York National committeeman. But such prominent Pennsylvanians as Senator Reed, Boss Vane of Philadelphia, Governor Fisher and W. B. Mellon, G. O. P. chairman, incline toward Hoover, and Tuesday's result may have a decisive influence on the Secretary of the Treasury.

The Hoover forces claim at least thirty delegates in Ohio, while the opposition concede him only sixteen. If he gets more than twenty, he can rightfully regard it as a victory over Dawes. In Massachusetts he is expected to pick up at least thirty and possibly the whole thirty-nine.

G. O. P. ALWAYS LATE

Candidate Declares Party Slow Denouncing Corruption.

Republicans always are late in demanding a "new deal," declared Frank C. Dailey, candidate for the Democratic nomination for Governor, addressing the Jefferson Club at the Denison Saturday night. "The Republican party never has asked for a new deal during an administration, no matter how corrupt it may have been," he said, "but when the time comes for another election its loudest cry is a 'new deal.' And then it indorses the administration of every corrupt Republican official at the same time."

Another device makes it possible to switch the sound to either ear or both. A loud tone irretrievably causes the eye nearer it to blink slightly, though the patient may claim that he hears nothing.

THE patient is made to read aloud in his normal voice in another test, while a tone is switched from ear to ear. The intensity of the voice is regulated

by the sound of the voice and this can be drowned out.

One who has normal hearing in both ears will, however, be able to hear his voice with one ear while the tone is switched to the other, and he will not change the level of his voice as the tone is switched back and forth.

If he is deaf in one ear, he will raise his voice every time the tone sounds in his normal ear. When the tone is switched on

and off both ears, a person with normal hearing will raise his voice each time the tone is turned on, while one who is deaf will continue to read without changing his voice.

TO detect a false claim of deafness in one ear, the tone is switched repeatedly back and forth between the ears at varying intensity, and the patient is asked

to signal each time he hears a sound. A truthful signal can be made almost instantaneously, but if the patient must stop to decide each time in which ear he hears the sound, much more time is required and he quickly becomes confused, thus betraying himself.

These tests are expected to prove valuable in compensation cases where loss of hearing is involved.

HOUSE TO VOTE SOON ON CLARK MEMORIAL BILL

Committee Will Report Today on Measure After Long Delay.

WASHINGTON, April 23.—The House bill authorizing \$1,000,000 for a memorial to George Rogers Clark at Vincennes, Ind., was expected to be reported to the House today, after being held up three weeks in the library committee by Representative Luce, its chairman.

Pressure was brought to bear on Luce by Representative Albert Vestal. House whip, after the Indiana delegation held a meeting Saturday night.

The delegation in conference with D. Frank Culbertson and other members of the Indiana Commission, agreed to pass the bill "as is" and then to seek at least \$1,500,000 for the memorial through compromise in conference between the House and Senate, the latter body having passed a bill authorizing \$1,750,000.

Senator Watson, of Indiana, with whom the Hoosiers have been working, was indignant at Luce's reported attempt to make an agreement that the Senate conferees would leave the bill untouched.

Luce's committee which sliced the amount and asked also reframing of the bill so that a Federal commission would build the memorial, has been holding the bill back so that its proponents would have to take the changed bill or nothing, in the legislative jam at the end of the session.

The first chance to pass the bill will probably be next Monday.

GILLIOM URGES CARE IN PRECINCT VOTING

Attorney General Addresses Real Silk Mill Employees

Care in the selection of precinct committeemen in the primary election, May 8, was urged by Attorney General Arthur L. Gilliom, candidate for the Republican nomination for United States Senator, addressing employees of the Real Silk mills at noon today.

"Every Republican voter should be as discriminating in the voting for precinct committeemen as in voting for a candidate for United States Senator," Gilliom said. "The character of precinct committeemen elected May 8 will determine the character of county chairmen whom they elect; likewise the character of county chairmen elected by the precinct committeemen will determine the character of the State committee."

NEW METHOD DETECTS FALSE DEAFNESS BY REACTION TO EYES AND VOICE

By Science Service

NEW YORK, April 23.—Holding a watch near the ear to test hearing may soon be a thing of the past. Ear tests developed by scientists of the Bell Telephone Laboratories here make use of accurate instruments which, with psychological aids, determine a person's exact degree of hearing. False claims of either deafness or exceptional hearing are of no

avall, for the truth can now be easily discovered.

A push-button on the instrument which measures the tone emitted for the test permits the interruption of the sound at any moment.

If a patient says he hears a tone, and then claims that he still hears it when it has been cut off, it is evident that he has been deceiving himself.

Another device makes it possible to switch the sound to either ear or both.

A loud tone irretrievably causes the eye nearer it to blink slightly, though the patient may claim that he hears nothing.

THE patient is made to read aloud in his normal voice in another test, while a tone is switched from ear to ear. The intensity of the voice is regulated

by the sound of the voice and this can be drowned out.

One who has normal hearing in both ears will, however, be able to hear his voice with one ear while the tone is switched to the other, and he will not change the level of his voice as the tone is switched back and forth.

If he is deaf in one ear, he will raise his voice every time the tone sounds in his normal ear. When the tone is switched on

and off both ears, a person with normal hearing will raise his voice each time the tone is turned on, while one who is deaf will continue to read without changing his voice.

TO detect a false claim of deafness in one ear, the tone is switched repeatedly back and forth between the ears at varying intensity, and the patient is asked

to signal each time he hears a sound. A truthful signal can be made almost instantaneously, but if the patient must stop to decide each time in which ear he hears the sound, much more time is required and he quickly becomes confused, thus betraying himself.
