

ROCKNE CRASH REVIVES TALK ON 'CHUTE USE

Doubt Practicability of Air 'Life Preservers' in Transport Planes.

By Scripps-Howard Newspaper Alliance
WASHINGTON, April 10.—The recent airplane crash in which Knute Rockne and seven others were killed has revived discussion over the use of "life preservers" on passenger airliners.

The only known forms of aerial life preservers are the individual parachute and the experimental planechute, in which the entire plane floats down attached to a gigantic parachute.

There is no passenger airline in America today that equips its passengers with parachutes.

Both the airlines and the Department of Commerce consider the use of individual chutes on transport planes inadvisable, and the planechute has not yet been sufficiently developed for practical use.

Psychology Bad

There is little likelihood of the government requiring the use of life preservers on air transport lines until something new in the parachute line is developed.

Airlines give several reasons for not providing passengers with parachutes.

They have found the psychological effect bad, tending to frighten passengers rather than reassure them.

Accidents in the air, when they do occur, happen so quickly that there would be slight chance of unloading a large transport plane carrying from ten to thirty passengers.

No Use in Rockne Crash
Aged persons and small children, both of whom ride the airlines, could not be expected to jump into space and successfully operate their parachutes.

There is no room in present type transport planes for each passenger to wear a bunglesome chute, weighing about thirty pounds.

Records of fatal crashes in air transport lines show that in only one or two instances, both of them doubtful, would parachutes have saved the passengers. They certainly would have saved no one in the Rockne crash.

Wearing of parachutes is compulsory in the army and navy, but most of this flying is done in open cockpit planes, which afford easy egress, and the fliers are trained and disciplined in the use of chutes.

FACTORY BANS WINDOWS

Million-Dollar Structure Will Exclude All Light From Structure.
By NEA Service
FITCHBURG, Mass., April 10.—A million-dollar factory plant to be erected here—and it will be windowless.

Not a single ray of light will find

its way into the building, yet artificial lights will illuminate it even in the remotest corner.

Not a single breeze will find its way into the building, yet the air will be more pure than that outside.

It will be a one-story building and will manufacture saws and files.

The outer skin of the body is almost germ-proof.

"I'm
going, anyway"

THE modern Miss needs no "time out" for the time of month.

If you've ever taken Bayer Aspirin for a headache, you know how soon the pain subsides. It is just as effective in the relief of those pains peculiar to women!

Don't dedicate certain days of every month to suffering. It's old-fashioned. It's unnecessary. Aspirin will always enable you to carry on in comfort. Take enough to assure your complete comfort. If it is genuine aspirin it cannot possibly hurt you. Bayer Aspirin does not depress the heart. It does not upset the stomach. It does nothing but stop the pain.

Headaches come at inconvenient times. So do colds. But a little Bayer Aspirin will always save the day. A throat so sore you can hardly swallow is made comfortable with one good gargle made from these tablets. Neuralgia. Neuralgia. Rheumatism. Pains that once kept

people home are forgotten half an hour after taking a few of these remarkable tablets. So are the little nagging aches that bring fatigue and "nerves" by day, or a sleepless night.

Genuine Bayer Aspirin tablets cost so very little after all, that it doesn't pay to experiment with imitations!

'NEW' HAIR EACH DAY

LONDON, April 10.—Woman's love of change and variety has given birth of a new hair-dyeing device, which enables a daily dyeing of hair, each day a different color.

The machine, on exhibition at the Hairdressers' exhibition, displayed its abilities on numerous women.

It can dye the blackest hair a blonde stage, or vice versa, or can change hair to any intermediate stage.

Accidents in the air, when they do occur, happen so quickly that there would be slight chance of unloading a large transport plane carrying from ten to thirty passengers.
