The Times, at great expense, and with a full realization that such a daring revelation might invite undue criticism, has engaged competent chemists to tell you of the condition of various rivers, streams and lakes in Indiana.

"Indiana's Germ-Infested Waters" takes you to the Limberlost, girlhood home of Gene Stratton Porter. Tells why that country no longer exists, why birds have been forced to flee. Takes you into the Brandywine, the Ole Swimmin' Hole of the immortal Riley; to the shaded banks where Gen. Lew Wallace sought solace as he fished and perhaps dreamed, but where today's red-blooded boy finds not fish, but pollution. It wades into nearby swimming beaches and into a State Park, over to the grounds made memorable by the Wright Brothers, where now a quiet, unassuming stream wends its way, tempting, but filled with hidden diseases, and elsewhere.
