HERE'S ORIGIN OF THAT OAKIE SMILE

Now you can see where Jack Oakie, famous movie comic, got his
happy grin. Yes, right from his mother, whose picture with him here
shows that he looks as much like her as any two so close can appear.
She's Mrs. Evelyn Offield, and the reason for their embrace here is their
recent voyage together to Hawaii.

DETECTION OF EARLY GENIUS IS FORECAST

Professor Finds Physical
and Mental Growth Are
Related.

By United Press
CAMBRIDGE, Mass., Dec. 29.—
Genius some day may be detected
in childhood, it was indicated today
in a study of anthropology and
mental expansion presented to the
ninety-third annual meeting of the
American Association for the Ad-
vancement of Science.

Twelve years of annually repeated
observations and measurements of
the physical and mental growth of
a cosmopolitan group of American
school children offered encourage-
ment to the hope that "a series of
measurements in the early years of
childhood may make it possible to
predict the subsequent course of
mental and physical growth of that
particular individual," according to
Walter F. Dearborn, professor of
education and director of the
psycho-educational clinic at Har-
vard university.

Professor Dearborn cited one in-
stance in which a child showed a
marked physical growth between
the ages of 9 and 12, with no cor-
responding change in the mental
level, followed by a let-up in the
physical growth and a decided
mental spurt.

From this and similar cases he
drew no conclusion but that "the
relationship of mental and physical
growth within the individual is not
just a hit or miss affair."

Various primitive arts of the
American Indian, including those of
South America, are responsible for
the development of "modern" chem-
ical industries, C. A. Brown of the
United States department of agri-
culture told the association.

The modern fertilizer industry is
indebted to the Peruvian Indians,
and the uses of chocolates, cassava
and maple sugar were also acquired
by white settlers from the native
times, he said.

The dyeing industry, tobacco,
quinine and smelting all have de-
rived considerable influence, if not
their very existence, from primitive
peoples, he declared.

Dr. Edward L. Thorndike of
Teachers college, Columbia univer-
sity, found that the organization of
human nature may be discovered in
the genes, which determine human
characteristics.

He warned against the "limita-
tions and dangers" of assuming the
existence in the genes of such traits
as leadership, inventiveness, mem-
ory, imagination, originality, hon-
esty and perseverance.
