In Maryland and Kentucky, tobacco is air-cured in specially ventilated barns.

In Virginia and the Carolinas, "Bright" tobacco is flue-cured by heat in log barns.

In Turkey and Greece, tobacco is sun-cured by hanging on racks in the open air.

We cure each tobacco in a Chesterfield the way that is best for that tobacco

... another reason why Chesterfields are milder and taste better

When we say that a tobacco is good enough for Chesterfield cigarettes, we mean just this—

... TOBACCO that is ripened in the sunshine, then picked, leaf by leaf, when fully ripe.

... TOBACCO that is cured just right by the farmer—flue-cured, air-cured or sun-cured to seal in its

good aroma and flavor.

... TOBACCO that is aged and mellowed in hogsheads or bales for two years or more until free from harshness or bite.

That is the kind of tobacco we use for Chesterfields—mild, ripe tobacco, cured just right and aged for flavor and taste.
