THIS CURIOUS WORLD • By William Ferguson

THE "TINY" SPECKS WHICH CAN BE SEEN ON THE SURFACE OF THE SUN, AND WHICH ARE KNOWN AS SUN SPOTS, ACTUALLY MEASURE AS MUCH AS 50,000 MILES ACROSS.

The Venetians guarded well the secret of mirror making. All factories producing mirrors were located on the isolated island of Murano, and no foreigners were allowed to set foot on the island. But after many years the secret escaped. Four glassworkers were bribed by certain interests in France to run away from Venice and take their mirror-making art to that country.
