Auto Radio Static Reduced

The U. S. Rubber Co. today announced it has begun its marketing program of a powder which the company says will reduce static on automobile radios.

The powder, which is packaged at the rubber firm's Indianapolis plant, is now available through distributors of U. S. Fisk and Gillette tires, the company said.

Injected into inner tubes through an air hose and a specially designed container, the powder clings to the walls of the tube, thus modifying the static electricity caused by friction, the announcement said.

The powder was developed prior to the war. It was an outgrowth of research on conductive rubber tires for industrial trucks and tractors. Such tires were developed for use in munitions plants where static electricity might cause fires and explosions.

He could have been one, Pap, on account of his wings, but he didn't want to learn to wave a magic wand for kids.

Nonsense.

Hmm. It's one thing, Ellen, to contend with an imaginary fairy godfather. But to explain away the existence of an imaginary brother who did not choose to be an imaginary fairy godfather—that's going to tax your imagination. And mine!
