

FARM AND HOUSEHOLD.

WINTER FEEDING OF DAIRY COWS IN DENMARK.
The winter food of cows is a matter of very great importance, and has a marked influence on the quality of the butter. The food employed consists of corn, hay, and straw. On some farms mangels are given, but this is not the rule. Considerable information as to the influence of particular foods on the quality of the butter has been gathered by Professor Segelcke at the data afforded by dairy exhibitions. At such exhibitions, after the judges have pronounced their verdict on the quality of the butter, the history of each specimen is attached to it, the food supplied to the cows being one of the particulars mentioned. The different kinds of corn and cake employed are divided by Professor Segelcke into three classes, according to their influence on the quality of the butter.

First class: rape cake, wheat, bran and oats. Second class: barley, palm nut cake, and perhaps wheat. Third class: insect cake, peas, vetch seed and rye.

Straw has a still lower value, producing when used alone a very hard and inferior butter; over ripe straw or hay is especially prejudicial. The use of one or more of the first class foods is essential for the production of fine butter; they give a moist, soft character to the butter, and greatly improve the flavor. A straw diet, with the addition of these foods, will yield a butter equal to the best. A mixture of one or more of the first class foods is recommended. The third class foods yield a dry, hard butter of inferior quality. The use of rape cake in Denmark has greatly increased of late years. Instead of exporting rape cake Denmark now imports it, and its price is now little different from that of insect cake.

The daily ration of Mr. Valentiner's milk cows during winter consists of oat and barley straw, not cut into chaff, with rape cake 1 lb., malt dust 1 lb., bran 2 lbs., corn 4 to 5 lbs., mangel 20 to 30 lbs., hay 6 to 10 lbs. The corn is mixed oats and barley. These are commonly known as "mixed corn," in the proportion of two-thirds oats and one-third barley. The corn is ground and moistened with water when given to the cows. The cows are fed twice in the day, the first feeding commencing at 5 a. m., the second at 4 p. m. Rye or wheat straw is given as litter at night.

TO TELL THE AGE OF FOWLS.
If a hen's spur is hard, and the scales on her legs rough, she is old, whether you see her head or not, but her head will corroborate your observation. If the under bill is so stiff that you can not bend it down, and the comb thick and rough, leave her, no matter how fat and plump, for some one less particular. A young hen's scales on her legs are smooth, glossy, and fresh colored, whatever the color may be; the claws tender and short, the nails sharp, the under bill soft and the comb thin and smooth.

An old hen turkey has rough scales on the legs, callouses on the soles of the feet, and long, strong claws; a young one the reverse of those marks. When the feathers are on, the old turkey cock has a long tuft or beard, a young one but a sprouting one; and when they are off the smooth scale on the legs decide the point, besides the difference in the tenderness of the skin under the wings by the pinions and the bill and the coarseness of the skin.

Ducks are distinguished by the same means, but there is a difference that a duckling's bill is much longer in proportion to the breadth of its head than the old. A young piglet is discovered by its pale color, smooth scales, tender collapsed feet, and the yellow, long down interspersed among its feathers. A piglet that can fly has always red colored legs and no down, and then is too old to use as a squab.

TRAINING A COLT.

General Geddes, of the Iowa agricultural college, in answer to a question recently made the following remarks about the early training of colts: The foal should see man and become accustomed to his presence from his birth. A lasting control over the animal may be gained in the following way: As soon as the foal is dropped, or a minute or two after, assist him in his efforts to rise by placing the arms round his breast and hips. He will resist the handling, but it must be continued until the foal is steady and square on his legs. He must not be allowed to get away from you, or the lesson is lost, but as soon as he is perfectly quiet release the hold on his head, then on his neck, then on his chest, and finally on his hind legs, until he is perfectly steady on all four. When the colt is four weeks old he should be broken to the halter. This should be made of light material and fitted properly to his head, so that it can be enlarged from time to time as the animal increases in size. This act should be done with great gentleness; any roughness on the part of the man will never be forgotten by the colt. This is the second step in the animal's education; the second impression he receives of the fact that man is his master, and if the lesson is performed without violence, he also learns that his master is not his enemy, but his friend. I have found it a plan to leave the halter on the head of a colt a day or two at a time until he becomes accustomed to wearing it. The lesson can be completed by the halter on the head of the latter is left on the animal. Lead with the halter is the only act in the breaking of the colt that should be done until the animal reaches his first year, at which time instruction in paces should be the business of his education.

THE HOUSEHOLD.

Vegetables of all kinds are now arriving in large quantities from all other parts of the world, and are fresher and superior in quality to the products of the southern states, from which the greater portion of the supply has been derived for some time. Prices are pretty much the same as those of the present season, and asparagus is nearly out of season, and the first crop of cauliflower is nearly exhausted. New potatoes and string beans are plentiful and cheaper. Fruit of every variety, in season, is very abundant, except strawberries; these are becoming scarce and are generally small and poor. Raspberries are in a little larger supply. "Antwerp" apples at 9 to 12 cents per one-third of a quart can in the markets and the fruit stores. Currants are very plentiful, and sell at six to ten cents per pound, the highest price being asked for the variety known as cherry currants. Cultivated blackberries are now arriving, and sell at 16 cents per quart, while wild blackberries sell at 10 cents. For other fruits, as whortleberries, gooseberries, cherries, peaches, watermelons and cantaloupes, prices are unchanged. "Beach" or "mountain" plums are the newest thing in the markets in the way of fruit; they sell generally at 10 cents per quart; some very large sized ones are in the fruit stores at higher prices. The pineapples now arriving are quite small; they sell at the rate of two or three for 25 cents. Hot house grapes sell in the lower Broadway fruit stores at 75 cents to \$1.50 per pound. Spring chickens sell at 25 to 30 cents and spring ducks at 20 to 25 cents per pound, and small fowls at \$1.75 to \$2 per dozen. Residents of Brooklyn can, after July 4, buy woodcock, but their sale is forbidden in New York county until August 1. Fish is plentiful and prices are low; salmon is the dearest variety, selling at 20 to 30 cents per pound. Pines for meats, butter, eggs and all staple articles not enumerated are the same as last week.

1. Raspberry Vinegar—Gather the raspberries on a dry day; put them in a jug; wash them thoroughly; strain and for every quart of juice add half a pint of best wine vinegar; let them rest two or three days, and then for every pint of the liquor add one pound of lump sugar; boil all together twenty minutes; let it stand until cold; then bottle, but do not cork too tightly, else the bottle will burst.—M. M.

2. Cover your raspberries with good vinegar, and after lying for two or three days, strain through a flannel bag; pour the juice again on the raspberries, and if you wish to have it very rich, a third time; the last straining should be perfectly clear; to every pint of juice add one pound and a quarter of lump sugar and boil one hour.—F.

Mixture for Skeletizing Leaves.—Four ounces common washing soda dissolved in one quart boiling water; add two ounces slaked quick lime; boil 15 minutes; cool solution and pour off clear liquid into saucepan. Put over the fire, and when at boiling point put in leaves and boil for one hour; add boiling water occasionally to replace the loss by evaporation. When leaves are removed, if the cellular tissue does not rub off in cold water boil again. When skeletons are exposed they are not white. To bleach, put the skeletons in a solution of chloride of lime—one large table spoonful of chloride of lime to one quart water, and a few drops of vinegar; let leaves remain in bleaching fifteen minutes; if leaves remain in the bleaching mixture too long they become brittle. A soft tooth brush is better than a coarse one with rather than the finger. Gather specimens of matured leaves in July to September; never in damp weather. Dry specimens in white blotting paper, under gentle pressure.—X.

Polish for Floors.—One pound of beeswax, one quart of benzine—the beeswax melted soft, to which add the benzine; put them over a range or stove, the fire closely covered, and benzine is highly inflammable; stir together till well mixed. These are the proportions; the quantity must depend upon the space to be covered. Apply to the floor, first making it clean, and rub in thoroughly. It shows the grain of the wood, and makes a permanent polish, growing better by use and rubbing in. It is free of dust, and clean, and not laborious to take care of, twice a year rubbing and sweeping, so to say, with a broom in a flannel cover. The floor of the Louvre has on it this preparation, and all who have seen it will recall its smooth and clean appearance.—Julia Cary.

Currant Jelly.—One pint of currant juice, one pound of sugar—these are the proportions—letting eight quarts of currants and 16 pounds of sugar; to the currants add one-half a pint of water; put over the fire to get hot; press through a sieve; use loaf-sugar; put it in the oven to get hot; put the currant-juice on the fire to get hot, in fact, boil up, take it off the fire while sizzling hot, add the sugar heated, in fact, yellow with heat; stir till it is jelly; cover with soft white paper, sealed on with beaten white of egg; put in a dry, sunny room. This will make a clear, firm, perfectly jelly.—Winifred Warriner.

Barberry Syrup.—Strip barberries, cover them with water, put them over the fire, and boil them until they do not burn; don't boil them, but when cooked squeeze and strain them carefully; to one pint of warm juice add two pints sugar; put the sweetened juice into a pitcher, which pitcher put into hot water until dissolved; then bottle it.—Katharine.

To Retain the Color of a Lawn or Calico Dress.

Take the table spoonful of alum, one table spoonful of salt, dissolved in one gallon of soft water; soak the dress, wash as usual, and rinse in the salt and alum.—Eliza Randall.

An Important Function Stimulated.

The kidneys exercise most important functions, which are so essential to the health of the human body, that they are called the "filters of life." Every breath, every pulse, every thought, makes waste and necessitates the development of new atoms. The used up particles in the blood are sifted from it and conveyed in a watery fluid by the kidneys, which then discharge this fluid into the bladder. A train of disasters to the system would follow if these "filters" were not thoroughly strained off and discharged. This is the case when the kidneys become diseased. Kidney disease is cured by restoring their activity, not only keeps open a most important outlet for impurities, but prevents diseases of the kidneys themselves, which are so common a source of trouble. Bright's disease, nephritis albuminosa and other maladies specially incident to them, which authority not specially rapid in their progression, are particularly obstinate and fatal.

Sick and Afflicted.

A cough or cold, if not properly attended to, may result in an incurable lung disease. For all diseases of the throat, breast and lungs, bronchial or asthmatic affections, Dr. Swayne's compound Syrup of Wild Cherry is a pleasant and certain cure—the oldest and best remedy. It promotes expectoration and removes all diseased matter which obstructs the lungs; the ulceration is healed and the sufferer is restored to perfect health. If the bowels are constipated or liver disordered, take first a few doses of Dr. Swayne's Tar and Sarsaparilla which will evacuate the bowels, and is of vital importance, relieve the congested liver and remove all diseased matter. These valuable remedies sold at the leading drug stores, or can be had by writing to Dr. Swayne & Son, Philadelphia. Ask your druggist for them. Browning & Sloan, wholesale agents.

A Card.

To all who are suffering from the errors and indiscretions of youth, nervous weakness, early decay, loss of manhood, etc., I will send a receipt that will cure you, Free of Charge. This great remedy was discovered by a missionary in South America. Send a self-addressed envelope to the Rev. Joseph T. Inman, Station D, Bible House, New York City.

Clifford's Febrile-Palatable, Powerful, Antiperiodic and Tonic.

Nature's remedy for fever and ague. Never known to fail in a single case. This popular remedy differs from all other ague cures, in being free from all poisonous effects on the system; it enters into the circulation and destroys all malarious poison, and thus eradicates the disease without producing any of those distressing after sensations, such as fullness and pain in the head, ringing in the ears and partial deafness, try it once and you will never be without it.

J. C. RICHARDSON, Proprietor, St. Louis.

For sale by all druggists.

"Itching Piles."

Is one of the most annoying diseases in the world, and all can find prompt relief in the use of "Swayne's Ointment." The symptoms are moisture, like perspiration, intense itching, particularly at night. Wm. P. Grove, U. S. Marshal's office, Harrisonburg, Va., writes: I suffered twenty years from this terrible disease, consulted many physicians, but found no permanent relief until I used "Swayne's Ointment." It cures better, pimples, all crusty, scaly, itchy skin diseases, leaving the skin clear and smooth without a blemish. Sent by mail to any address, on receipt of price, 50 cents a box or three boxes \$1.25. If your druggist has not got it, address letters to Dr. Swayne & Son, Philadelphia. Browning & Sloan, wholesale agents.

MANHOOD RESTORED.

A victim of youthful indiscretion, causing premature decay, nervous debility, etc., having tried in vain every remedy, has found a simple safe cure, which he will send to friends, or to the afflicted. Address J. H. REEVES, 42, Chatham St., N. Y.

Sandalwood Capsules.

The safest and most reliable cure for all diseases of the Urinary Organs. Certain relief in five days. Beware of dangerous imitations. All Druggists. Write for Circular. DUNN & CO., 35 Wooster Street, New York.

AYER'S CATHARTIC PILLS,

For all the purposes of a Family Physic.

CURING

Costiveness, Jaundice, Dyspepsia, Indigestion, Biliousness, Headache, Erysipelas, Piles, Hemorrhoids, Skin Diseases, Biliousness, Liver Complaint, Dropsy, Tetters, Tumors and Salt Rheum, Worms, Gout, Neuralgia, as a dinner pill and purifying the blood, are the most congenial purgative yet perfected. Their effects abundantly show how much they excel all other pills. They are safe and pleasant to take, but powerful to cure. They purge out the foul humors of the blood, they stimulate the sluggish or disordered organs into action, and they impart health and tone to the whole being. They cure not only the every day complaints of everybody, but formidable and dangerous diseases. Most skillful physicians, most eminent clergymen, and our best citizens, send certificates of cures performed, and of great benefits derived from these pills. They are the safest and best physic for children, because mild as well as effectual. Being sugar-coated, they are easy to take, and being purely vegetable, they are entirely harmless.

NOTICE

TO

CONSUMERS

OF

TORRINO

The great celebrity of our TIN TAG TORRINO has caused many imitations thereof to be placed on the market. We therefore caution all consumers against purchasing such imitations.

All dealers buying or selling other plug tobacco bearing a hard or metallic label render themselves liable to the penalty of the law, and all persons violating our trade marks are punishable by fine and imprisonment.

ACT OF CONGRESS, AUGUST 14, 1876.

The genuine TORRINO TIN TAG TORRINO can be distinguished by a TIN TAG on each lump with the word TORRINO stamped thereon.

Over 7,000 tons tobacco sold in 1877, and nearly 8,000 tons in 1878.

Taxes paid to the government in 1877 about \$3,500,000, and during the past 12 years \$20,000,000.

These goods sold by all jobbers at manufacturers' rates.

SNYDER'S

MEDICAL.

DR. PIERCE'S FAVORITE PRESCRIPTION.

By an immense practice, extending through a period of years, having within that time treated many thousands of cases of diseases peculiar to women, I have been enabled to perfect a most reliable and agreeable medicine, the merits and indications of which are so generally acknowledged as to present themselves to the mind with certainty and exactness.

To designate this natural specific compound, I have named it

Dr. Pierce's Favorite Prescription.

The term, however, is but a feeble expression of my high appreciation of its value, based upon my own personal observation, and a close observation of the results of its use.

My high appreciation of its value, based upon my own personal observation, and a close observation of the results of its use.

My high appreciation of its value, based upon my own personal observation, and a close observation of the results of its use.
