BOY DROWNED WHILE SKATING.
Merrell Lewis, the 12-year-old son of J. C. Lewis the barber, was drowned at Fountain Park Sunday while skating on the pond there with some other boys of about his own age. It seems that he fell while skating and slid off into the open water where it was perhaps ten feet deep, and although Lorin Courtwright, one of the other boys who was with him, dove after him his body was not recovered for nearly an hour, and all attempts at resuscitation failed of course. The blow is a hard one for his parents and we deeply sympathize with them in their bereavement.

FOR THE HOUSEWIFE

Washing Silk Waists.

To wash white or dainty colored silk waists (only one should be washed at a time) take a bowl of warm—not hot—water and add sufficient soap jelly to make a lather. Lay in the waist and if much soiled allow it to soak for twenty minutes except in the case of a dainty color, which may run. Wash by squeezing—not rubbing—through the hands, then remove and place in a second bowl of warm water and soap jelly, turning the waist on the wrong side. Squeeze through this bath, but do not wring the garment. Then rinse thoroughly in warm water to remove all traces of soap; otherwise the white silk might turn yellow when ironed. Finally put through cold water, and the silk will be an ivory color. If a pure white tinge is desired, add a few drops of bluing; to secure a cream shade put a teaspoonful of cold tea in the last rinsing water.

Simple Butter Test.

There is a simple test by which any housekeeper can be reasonably certain whether she has real butter, the renovated article or oleomargarine.

Put a sample of the doubtful butter about the size of a small chestnut into an ordinary tablespoon. Hold this over a flame—gas, kerosene or alcohol—stirring the butter with a splinter of wood or a match as it melts.

Bring to as brisk a boil as possible and after this has begun stir thoroughly two or three times at intervals, especially, just before the boiling ceases. Oleomargarine and renovated butter boil noisily, with a good deal of spluttering. They produce no foam or very little.

Genuine butter usually boils with less noise and produces an abundance of foam. It is the difference in regard to the foam which is most marked.

Candied Cranberries.

Here are directions for making candied cran
