The city of Crawfordsville is no longer in the circus belt, and it has been years since a first-class circus has pitched its tents in the Athens of Indiana. Some years ago, so 'tis said, the city officers attempted to impose an exorbitant license fee, which the circus management would not pay, avoiding the penalty by camping just outside the city limits. Crawfordsville then found itself on the circus blacklist. **Wheat Prospects Are Favorable.**

While it is generally agreed that there has been much improvement in the winter wheat states since the opening of the month, prices became somewhat firmer upon the publication of the official report of condition on May 1. Based on the average of 78.4, the produce exchange statistician estimated the yield at 341,498,000 bu.

This is considerably less than the record-breaking production last year, but compares favorably with earlier crops. Since these figures were compiled there have been abundant rains in Kansas and Nebraska, where the need was most urgent, yet, on the other hand, a considerable acreage in spring wheat sections has been abandoned because of excessive moisture.

#### An Old Scholastic Question.

The late Dr. Talmage was on one occasion in the company of some theological students. They, fresh from the study of church history, were laughing together over the old scholastic question:

"How many angels are supported by the point of a needle?"

They were surprised when Dr. Talmage turned to them and said:

"Well, how many do you think?"

As no one answered he went on, with decision:

"Well, I'll tell you—five."

And he justified his answer with the following story:

One very stormy night he was coming home late, and noticed a light in the window of a room where he knew a poor woman lived whose husband was at sea. He wondered what kept her up so late, and he went to see. He found her hard at work sewing by her lamp, while her five rosy children were sound asleep beside her.

"There," said Dr. Talmage, "was a needle supporting five angels."—Philadelphia Record.
