Cincinnati, Sept. 2.—Joe Kelly made three baggers, Frazer and Loebert each made one with the result that the Cincinnati Nationals had no trouble in defeating the Pittsburgh afternoon. Even at that, had Wagner been in shape to run, the Pirates might have tied the score. Wagner went in to bat for Liefeld in the ninth and smashed out a screamer that looked good for a homer but the Pittsburgh shortstop could only hobble as far as second base on the hit. The score:

CUBS AT LAST BEATEN.

Chicago, Sept. 2.—The lowly St. Louis aggregation humbled the lively Cubs this afternoon at National League park, fielding errors, two hits for extra bases and three battery misplays giving the visitors five runs as against two amassed by the locals. Beebe held the hard hitting locals down to five hits. Score:

FAIRVIEW HELD ITS OWN TILL
LATTER PART OF THE CON-
TEST—TWO GAMES TO BE
PLAYED THIS AFTERNOON

The Dayton Shilohs, who recently defeated the Giants proved fully as strong against Fairview yesterday afternoon winning by a score of 7 to 2. For six innings Fairview had as much license to win as did the visitors during the latter part of the game, the Buckeye lads forced ahead.

The Shilohs hit freely while Fairview could do little with Young's delivery. There were some changes in the local lineup. Third base, which has been a hard place for Fairview to fill, was played in good style by ohn Goehner, captain of the Palladium team.

The Shilohs would have secured more runs had it not been for the fast work of the Fairview players, cutting off runners at home plate. This afternoon the same team will play a fast double header, the first game to be called at two o'clock.

Chicago, Sept. 2.—The Cleveland Americans could do nothing with White this afternoon when hits would have meant runs and Chicago scored a handy victory. The singles, an error and a wild pitch gave the visitors their only run, while during base running, bunching of hits in the eighth, which with one made in the sixth made the final score four to one. The score:

R.H.E.	
Cleve...	0 0 0 0 0 0 0 1—1 6 1

WON LUCKY GAME.

St. Louis, Sept. 2.—St. Louis won a lucky game from the Detroit Americans this afternoon. With the score standing nothing to nothing in the locals half of the sixth, Hemphill smashed out a liner which hit the center field fence and before it could be fielded back the St. Louis center-fielder was across the home plate. A few minutes later a heavy rain storm made further playing impossible.

RAISING DUCKINGS.

The Sensible Methods Employed on a Successful Ranch.

The method of brooding and of feeding ducklings at one of the most successful ranches in Massachusetts is thus described by a writer in Reliable Poultry Journal:

All ducklings are brooded in hot water pipe houses of the ordinary box hovey pattern, with one flow and one return pipe, each two inches in diameter.

It is aimed to keep the temperature under the hovers at between 80 and 90 degrees and the house itself comfortably warm. There is always plenty of fresh air in the houses at all times, and when the ducklings are two weeks old they get an outdoor run on green grass. The little birds are kept comfortable, clean and well fed. Their runs and hovers are bedded with planer shavings.

The water founts are galvanized iron and are placed on a wire cloth fastened on to a board walled pit at a level with the earth floor of the run, so that any water slopped is quickly drained away and does not mess up the brooder house.

For the first four days the ducklings are fed four times a day all they will eat up clean in twenty minutes of a mash made of four parts by measure of wheat bran, one part cornmeal, one part low grade flour and 5 per cent fine grit.

From four days to four weeks old they are fed four times a day all they will clean up of a mash made of four parts by measure wheat bran, one part cornmeal, one part low grade flour, 3 per cent fine grit, 5 per cent beef scrap, beef scrap, soaked first by scalding. Finely cut green clover, rye or cabbage is fed freely.

From the end of the fourth week until six weeks they have the following mash four times a day, all they will clean up quickly: Three parts by measure wheat bran and cornmeal and 15 per cent low grade flour, 10 per cent beef scrap, 10 per cent green food and 3 per cent grit. Keep oyster shells before them.

From eight weeks until finish at ten or eleven weeks they are fed three times a day on a mash of one-half cornmeal, equal parts by measure wheat bran and a low grade flour, 10 per cent beef scrap and 3 per cent grit, with plenty of oyster shell.

A Year's Poultry Account.

A Williamsport (Pa.) correspondent of the American Poultry Advocate says: On Jan. 1, 1935, we had only eight birds on hand, of which number one-half were killed, at different times during the year, until we had but nine left on Dec. 1. The average number for the year was fifteen, and they laid 2,300 eggs, which sold for \$14.50; the average number of eggs for each hen was 153 and the average cash income \$276 per hen. The food cost \$16, or \$1.07 each, and the net profit was \$169 on each hen. The chickens were White Wyandottes, Leghorns, Plymouth Rocks, etc. Most of them are pure bred.

Egg Suggestions.

Eggs from hens that are too fat or too poor do not hatch well. Eggs from hens that have been forced for egg production during the winter months do not hatch well as a rule.

There is no such type as an egg type, a fallacy mainly built on speculation, never on observation.

There are no known means to tell whether an egg will hatch a female or male, but it is generally conceded that the males preponderate where young males are mated to hens, but even this may be doubtful.

Eggs from perfectly mature birds produce stronger chicks than eggs from immature stock.

Don't trouble the hen at the time of hatching. Be patient and keep out of her sight. You will get a better hatch by so doing.

Don't sprinkle or immerse in water the eggs the day before hatching. It will do no good, whatever is said to the contrary, and only impair your chances of a good hatch.

Poultry Philosophy.

Care should be taken that there are sheltered spots in the range so that the birds can find them should a heavy storm suddenly come up. These shelters, too, will be appreciated during the heat of the day.

Every now and then an inspection should be made of the range to see that no decaying animal matter is lying about where the stock can get it. Dead birds, rats or other animals soon gather a lot of maggots, which the chicks quickly devour. These maggots, once inside the crop, bore their way into the intestines of the birds, giving them what is known as limberneck, the neck of the fowl being limp and looking as if broken.

Do not try to raise deformed chicks—a waste of time and money.

Waste no time dreaming of the success of others. Success in the poultry business crowns the efforts of those who help themselves.

Do not dispose of your breeders. If they are worth \$5 to your neighbor, they are worth \$10 to you.

Give your birds extra care and attention during August, September and October if you want them to win. Keep a sharp lookout for hawks. They are feeding their young, and breeders are a great delicacy.

Remove the males from the breeding pens at the close of the egg season.
