

**The Best Guaranty of Merit
Is Open Publicity.**

Every bottle of Dr. Pierce's world-famed medicines leaving the great laboratory at Buffalo, N. Y., has printed upon its wrapper all the ingredients entering into its composition. This fact and places Dr. Pierce's Family Medicines in *clear all by themselves*. They cannot be classed with patent or secret medicines because they are neither. This is why so many unprejudiced physicians prescribe them and recommend them to the patients. The ingredients that are composed of, and that the ingredients are those endorsed by the most eminent medical authorities.

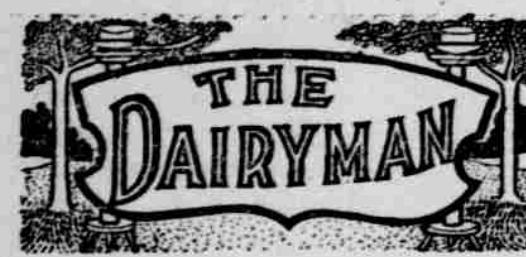

The further fact that neither Dr. Pierce's Golden Pillard, Dr. Pierce's great stomach tonic, liver invigorator, heart regulator and blood purifier, nor his "Favorite Prescription" for weak, over-worked, broken-down, nervous women, contains any secret ingredients to place all by themselves.

Many years ago, Dr. Pierce discovered that chemically pure glycerine, of proper strength, is a better solvent and preservative of the medicinal properties of using in our indigenous, native, medicinal plants than is alcohol, and furthermore, that it possesses valuable medicinal properties of its own, being demulcent, nutritive, antiseptic, and a most efficient antifebrile.

Neither of the above medicines contains alcohol, or any harmful, habit-forming drug, as will be seen from a glance at the formula printed on each bottle wrapper. They are safe to use and potent to cure.

Not only do physicians prescribe the above, non-secret medicines largely, but the most skillful people employing in people who would prefer to use the ordinary patent or secret medicines. Every ingredient entering into the composition of Dr. Pierce's medicines has the strongest kind of an endorsement from leading medical authorities of the several schools of practice. No other medicines put up for like purposes have any such professional endorsement.

Dr. Pierce's Pleasant Pellets cure constipation. Constipation is the cause of many diseases. "Take care of your bowels and you cure the disease." One "Pellet" is a gentle laxative, and two a mild cathartic. Drugists sell them, and nothing is "just as good." Easy to take as candy.

It is not one single thing that makes a co-operative creamery successful, but it is the combined work of many essential things, says State Dairy Inspector Winkler of Minnesota. The buttermaker is generally considered the most important factor for a successful creamery, but his importance is mainly that he is in a position to bring together and harmonize the forces to bear on the important place. The buttermaker has an unlimited amount of pressure behind his creamery business if he goes to work and develops it right, or course a buttermaker generally has his hands full in keeping his creamery presentable, and he should receive liberal assistance from all concerned, and those concerned mostly in that work are the farmers themselves.

While there are many ways in which the farmer may give his assistance, I want to point to one especially that the farmer is even more interested in than the buttermaker. This is the improvement of the dairy herd so as to get a bigger yield from the number of cows already on hand. The farmer is the one who is benefited most and should feel most interested. Now, I want to call attention to one way in accomplishing this that is practical, and a way that every dairyman should use, and that is to keep such a record of each cow in the herd that will show at the end of the year what each individual cow has done. This at first thought would seem like something that would entail a great deal of work, and I will not deny but what it takes some extra work, but I think it safe to say that it will be the best paying work that you can do in connection with your dairy.

The things necessary are a spring scale, pencil and memoranda book, all of which need not cost over \$2, and the extra work necessary need not be over thirty minutes a month outside the time it takes to do the figuring, and that will depend on how quickly you are to figure. The thing to do with this apparatus is to place it where you empty the milk after milking. Taking the milk from each cow, you first hang the pail on the scale, and with the pencil and book you have handy you make a record of what the cow has given. You can repeat this for every milking if you wish, but for a beginning about four times a month will give you good results and show you where you have the cow that is stealing her board and where you have the one that is paying for it.

In connection with this it is also necessary to have the milk from each cow tested about three times or more a year. With the number of pounds of milk and per cent of fat in milk, you have a basis to figure the value of your cow. The value of such a record is well expressed by Mr. Sly when he says, "If a farmer has two cows and loses \$10 on one and gains \$10 on the other, it does not take much of a mathematician to see that he did not make any money, but if he disposes of the cow that he lost \$10 on he would be \$10 ahead, besides saving extra time and labor required to care for the extra cow."

Base Slander.

"Your husband," said Mrs. Highman graciously, "is decidedly interesting and original, even if he does sometimes blow his own horn a little too."

"It isn't so!" indignantly exclaimed Mrs. Gaswell. "My husband always uses his handkerchief!"—Chicago Tribune.

Snow in Minnesota. Duluth, Minn., Oct. 22.—A blanket of heavy snow, six inches or more, fell in northwestern Minnesota, covering Vermillion and Masaba ranges and extending as far west as Fosston.

Grant me, O Father, enough of wisdom to live well. Prosperity to live easily grant me not, as thou seest best.—Carlyle.

**TAKES STAND FOR
A 5-YEAR COURSE**

Sept. T. A. Mott Would Lengthen Student's High School & College Life.

TALKS TO THE STUDENTS

SECRETARY BROWN VISITS HIGH SCHOOL IN INTEREST OF THE Y. M. C. A. CAUSE—OTHER NOTES.

Yesterday morning in chapel at High school Prof. Mott talked on "Predestination". Prof. Mott urged the pupils to finish the High School course and the College course if possible before deciding what would be their life work. In answer to a letter from the President of Harvard College, asking him if he favored a three year High School and college course, Prof. Mott said that he had written that he did not and that if he had his way the course would be five years instead of four as it is. He cited several instances where if the person had had more schooling he would be in a higher position than now holds.

Mr. Horace Verner a former teacher of the Michigan High School visited High School yesterday in the interest of the Allyn-Bacon Text Book Co., with which he is now connected. Secretary Brown of the Y. M. C. A. was at the school yesterday and distributed the little blue buttons to the students asking them all to lend their assistance to the work that he is interested in.

Walker Land has taken the agency for the High School Life a magazine published in Chicago solely for the teachers and pupils of High schools. He has some good propositions for the people wishing to read a good High School paper and keep in touch with other schools of their same class.

Miss Ruth Thistlthwaite who was unable to attend school last week is back again this week.

Pleasantly Surprised.
Mr. and Mrs. Thomas Trousse, were pleasantly surprised by a number of their friends at their home on the Fouts road, recently. The evening was spent in card playing and other amusements. Refreshments were served. Among those who were present were Messrs and Mesdames Harry Minck, Wm. Uthe, Wm. Sleeth, Dalby, Stegal, Dickey, John Plocke, Misses Jessie Meek, Addie Hackett, Ethel Uthe, Ida Sleuth, Emma Sleuth, Nellie Sleuth, Eve Sleuth, Eve Parshall, Esther Stegal, and Mary Pickey. Messrs Jules Hackett, Albert Parshall, Ora Williams, Albert Wuenker, John Wuenker, Raymond Uthe, George Pickey, John Vion and Jessie Meek.

HEARST VERY CONFIDENT
HE NAMES HIS MAJORITY
In Great Meeting at Madison Square Garden He Tells Audience That He Will Carry State by at Least 150,000 Votes.

New York, Oct. 22.—Before some ten thousand people who packed Madison Square Garden tonight, William Randolph Hearst, just returned from a ten days tour up the state, proclaimed his conviction that he will carry New York state by 150,000 pluralities.

Mr. Hearst received an ovation lasting 22 minutes. He devoted his speech to a recital of his record as showing his efforts to help the people. The candidate also addressed two overflow meetings.

**MISS LOUISE GUNNING.**

The daughter of a Brooklyn clergyman, Miss Louise Gunning is rapidly making her way as a stage favorite. From a little red headed schoolgirl began with a voice of unusual sweetness, but narrow range. She cultivated her voice assiduously, greatly strengthening it without injuring its birdlike quality. Her first hit was made in the singing of Scotch songs. Miss Gunning is a real beauty. She is petite in form, with an abundance of fine, deep, glossy red hair, which some of her admirers call Titan or auburn.

5 DEAD; MANY INJURED GIVEN ANOTHER CHANCE**A BAD SOUTHERN WRECK A REPRIEVE BY GOVERNOR**

Sunset Limited Meets With Accident at Butte, La.—Relief Train Sent to Aid of Sufferers—No Definite News as Yet.

BULLETIN.
New Orleans, La., Oct. 22.—The Sunset Limited on the Southern Pacific, westbound, was wrecked at Butte, La., 24 miles from New Orleans. A relief train was sent from here carrying doctors, nurses, etc.

No details have been received owing to inaccessibility of the place.

The latest reports say five are dead and a large number injured.

TAR IMPROVES ROADS

FINE RESULTS FROM EXPERIMENTS AT JACKSON, TENN.

Highways Thus Treated Stand Wear and Tear, Are Dustless and Beneficial to Public Health—How the Tar Is Applied.

Experiments in tar and oil for road improvement at Jackson, Tenn., are described in a bulletin issued by the United States department of agriculture.

During the spring and summer of 1905, says the bulletin, the office of public roads co-operated with Sam C. Lancaster, city engineer of Jackson and chief engineer of the Madison county good roads commission, in making a series of careful experiments to determine the value of coal tar for the improvement of macadam streets and roads. Tests were also made of the utility of crude Texas oil and several grades of its residue when applied to the roads.

Experiments in tar and oil for road improvement at Jackson, Tenn., are described in a bulletin issued by the United States department of agriculture.

During the spring and summer of 1905, says the bulletin, the office of public roads co-operated with Sam C. Lancaster, city engineer of Jackson and chief engineer of the Madison county good roads commission, in making a series of careful experiments to determine the value of coal tar for the improvement of macadam streets and roads. Tests were also made of the utility of crude Texas oil and several grades of its residue when applied to the roads.

After more than seven months, including the winter season of 1905-06, the tarred streets and roads are still in excellent condition. They are hard, smooth and resemble asphalt, except that they show a more gritty surface. The tar forms a part of the surface proper and is in perfect bond with the macadam. Sections cut from the streets show that the tar has penetrated from one to two inches, and the fine black lines seen in the interstices between the individual stones show that the mechanical bond has been re-enforced by the penetration of the tar. The tar is a matrix into which the stones of the surface are set, forming a conglomerate or concrete. A second coating applied a year after the first would require much less tar than the first, as the interstices of the rock would then be filled with tar.

A tarred street is dustless in the same sense that an asphalt street is dustless, though a fine sandy powder wears off, as in the case of asphalt. It can be swept or washed clean. These streets have since been swept regularly and the city government is in favor of treating all of the streets with tar.

The cleaning that would soon ruin an ordinary macadam road does not injure the tarred surface, as the stones are not torn up or disturbed. The tar itself has antiseptic properties; hence its use would be beneficial both as a germicide and as a means of securing cleanliness.

Argument For Good Roads.
It is estimated that the summer travel of Maine annually brings into the state between \$15,000,000 and \$16,000,000, and it is argued that it could be increased by the addition of several millions more if improved roads were universal.

Line Breeding.
Line breeding is where a strain of fowls is bred in line year after year without the introduction of new blood, but should not be practiced without a thorough understanding of the subject. It is a question whether there is any benefit to be derived from this system of breeding, except for show purposes.

MORE LIGHT ON THE EQUITABLE

Big Life Insurance Company Must Open All Its Books to Inspection.

CIRCUIT JUDGE DECISION

PLAINTIFF IN THE CASE ALLEGES THAT THE FUNDS OF THE COMPANY HAVE BEEN MISMANAGED.

[Publishers' Press]

Milwaukee, Wis., Oct. 22.—The Equitable Life Assurance Society of New York was ordered to deposit with the Circuit Court of Milwaukee county all its books, data and memoranda showing reserve fund, accumulated surplus and other funds, covering a period from March 11, 1884 to March 10, 1904, in a decision handed down by Judge Tarrant in the suit of Albert Ellinger, Racine, Wis., a policyholder, against the Equitable Society in the Circuit Court today.

Judge Tarrant gave the Equitable the alternative of permitting Mr. Ellinger or his representatives to examine the books of the society at its New York office at a time and place to suit the convenience of both parties.

The effect of Judge Tarrant's decision, if it is sustained by the higher court, will be that the Equitable will be subjected to a searching probe along lines not included in the investigation of the Armstrong committee.

By the terms of Judge Tarrant's decision all the companies books, papers and memoranda affecting Mr. Ellinger's policy must be produced for examination. Mr. Ellinger charges that the company has not only mismanaged the funds of the society affecting his policy, but also has discriminated against him by permitting clerks and others to tamper with the funds upon which his policy would naturally depend. The scope of the examination, therefore, would permit the widest latitude of inquiry into the methods and practices of the officials of the society and the provisions made for the maturing of all tontine policies.

Dodson-Barefoot Wedding.

Cambridge City, Oct. 22, (Spl.)—Mr. J. C. Dodson and Miss Mary Barefoot were married at their home on West Main street, Saturday evening at 8:30, in the presence of a number of relatives and friends. The ceremony was performed by Rev. W. D. Trout. Many costly and useful presents were received and the couple were serenaded by the Cambridge City band, at 12:00 P. M. Those present from a distance were Mr. and Mrs. Elam Barefoot and son James of Cowan, Ind., Mr. and Mrs. Edward Fosdick of Indianapolis, Chas. W. Dodson, Superintendent of the Paoli Public schools, and Edmund C. Dodson, Superintendent of Veedersburg Public schools.

CARS OFF TRACK IN EAST END FREIGHT YARDS

While switching in the Pennsylvania yards in the eastern part of the city at an early hour this morning a cut of freight cars was run over a closed switch and several of them were thrown off the track. The exact amount of damage could not be learned. As the wreck crew was called immediately it is thought that they can be placed before time for the early morning trains.

THE SWINEHERD

that in the making of pork at low

prices the various species of pasture

grasses are the most beneficial, cheap-

est and most useful of the many foods

on which the hog subsists. The animal

which can make the best use of

them is therefore the most suitable for

general purposes.

To Load Hogs.

Handy devices for loading hogs are

numerous. Here is the best one I

know, says a writer in Kimball's Dairy

Farmer. I have tried the portable

chute, the hog yard chute and some

others, but this beats them all. My hog

house is built on a slight side hill.

The hogs go on the ground level.

I back the wagon up to a door on the opposite

side and drive the hogs in without any

chute. It is much easier to drive a hog

on a level floor than up an incline.

If you have a low wagon this can be

managed with almost any hog house by

digging two trenches for the rear

wheels, thus letting the hind end of the

wagon down to the level of the door.

A neighbor has one pen with a floor

about a foot higher than the rest of the

house. There is an outside door in this,
