

## Provisions Live Stock, Grain and Stock Markets

### RICHMOND MARKETS

Demand for red kidney beans is not as strong as usual at the opening of the season, and sales have been slow. Ordinary pea beans are selling in large quantities.

Celery is selling well, and the market is extremely firm. Best stock is commanding a good premium. Sales of cauliflower, cucumbers and other light vegetables are slow and of small volume.

#### THE LOCAL MARKETS.

The average young woman of today is busy and has no time to devote to anything but health and beauty. It comes to ninety-nine out of every hundred who take Hollister's Rocky Mountain Tea. Tea or Tablets 35 cents. A. G. Luken & Co.

Woman loves a clear, rosy complexion. Burdock Blood Bitters purifies the blood, clears the skin, restores ruddy, sound health.

**Apple Timber.**  
In parts of Michigan large quantities of apple wood logs are cut and sold for saw handles, as an exchange. Apple timber is hard, tough and without much grain, and once it is shaped it seldom splits or shreds. No other lumber is so well fitted for saw handles. The supply in Michigan comes in short logs six or eight feet long from abandoned orchards.

**Farm Brevities.**  
Never pasture the alfalfa the first year.  
A healthy flock of sheep is a profitable flock.  
Dragging the roads will make them less dusty.  
Mutton eaters are increasing faster than mutton.  
Weeds and poor seed cause many of the alfalfa failures.  
You can't afford to have a clock watcher for a hired man.  
There is such a compelling success to come your way.  
Alfalfa can be raised in Maine. How about its winter killing in Iowa?  
Soil that has been well cultivated and fertilized seldom needs inoculating.

**Death from Appendicitis.**

**SEEDLESS WATERMELONS.**  
They're from the Pecos Valley and weigh eighty pounds.

The very latest seedless watermelons were recently displayed in a Santa Fe car from the Pecos valley, N. M., at the Union depot in Kansas City, Mo. The car is filled with an exhibit of grain, fruit, vegetables and ore selected from different points in the valley, says the Kansas City Star. It has two eighty pound watermelons, a Missouri pippin apple that weighs twenty-four ounces, a bunch of grapes that weighs eleven pounds, a cucumber that weighs five and a half pounds and other fruits and vegetables of unusual size.

"Seedless watermelons require considerable cultivation," said W. C. Breeding of Lakewood, N. M., one of the men in charge of the car. "After the vine has grown three or four feet in length the end is covered with earth. When this end takes root it is cut loose from the old roots and the early blooms are pulled. Melons grown from the second blooms are seedless."

**HEN WITH GREAT RECORD.**  
Has Laid 291 Eggs Since Oct. 5 Last Year.

The proud owner of a hen that he believes has broken the world's record for laying eggs recently wrote to the bureau of animal industry of the department of agriculture, says a Washington special to the New York Globe. E. W. Starnell of Alexandria, Va., is the possessor of this remarkable specimen of poultry. He informs the bureau of animal industry that since Oct. 5, 1905, the hen has laid 291 eggs. When her year is up, Mr. Starnell calculates, she will have laid over 300 eggs. Exclusive of the molting season, this is at the rate of one egg every twenty-five hours.

Mr. Starnell does not record there is anything seemingly abnormal about his hen, save that she is a model of energy and industry.

You wouldn't expect a doctor to be happy when he is out of patients.

**Fortunate Missourians.**  
"When I was a druggist, at Livonia, Mo.," writes T. J. Dwyer, now of Grayville, Mo., "three of my customers were permanently cured of consumption by Dr. King's New Discovery, and are well and strong today. One was trying to sell his property and move to Arizona, but after using New Discovery a short time he found it unnecessary to do so. I regard Dr. King's New Discovery as the most wonderful medicine in existence."

**THE SQUEALING PIG.**  
Too Much Contentment as an Aid to the Cholera Plague.

We have been very free to advocate the policy of feeding farm animals liberally under practically all circumstances. Of course on a subject of this kind it is impossible to make a sweeping statement that is applicable in detail to animals of all ages.

During the next two months there will be heavy losses due to cholera or swine plague. These diseases, although not as common as they were formerly, are breaking out here and there throughout the central west. There may be a difference of opinion among men as to whether the disease can be checked when it once gets into a herd or not, but all will agree that the best policy is to keep it out if it is at all possible.

It is a sensible thing to feed growing pigs or even hogs lightly when there is cholera or swine plague in the neighborhood. The squealing hog is usually a healthy hog, and while it is practicable to feed a little grain every day along with pasture so as to keep young pigs growing well, at the same time comparatively little grain will do the work.

**A Typical Instance.**  
The method of handling and the conduct of a bunch comprised of 150 pigs that were swept away by cholera a month ago may be taken as a typical instance showing how the disease takes hold when conditions are favorable. These pigs were fed about all the grain they would eat while suckling, and they were kept on what is ordinarily called heavy feeding after they were weaned. At no time were they equal to the task of cleaning up the troughs at feeding time, though some time during the day they succeeded in eating up everything that was placed in the troughs. They were satisfied so far as the feed was concerned, and, as the owner expressed it after they were swept away with cholera, "they never knew what it was to squeal."

We believe that this was a case where they were overfed, their digestive system being thrown out of order by the extravagant use of food. This was followed by conditions ideal for the development of disease when the germ became lodged in the system. We do not say that hungry, vigorous hogs will never take cholera, but we do believe that in nine cases out of ten keeping them active and not supplying much grain the first four or five months will tide them over.—Iowa Homestead.

**Castle Williams.**  
Castle Williams, on Governors island, in New York bay, was named for Colonel Jonathan Williams, first superintendent of West Point, known as "father of the engineer corps" and designer of most of the fortifications around New York harbor, including the one which bears his name.

**Sartorial Plays.**  
As a pajama play is now on at one of the London theaters, the next company registered should be "Night-dress, Ltd.," says the London Outfitter. Also how long must we wait for "Sunday Best, Ltd.?"

**Postmaster Robbed.**  
G. W. Fouts, Postmaster at Riverton, La., nearly lost his life and was robbed of all comfort, according to his letter, which says: "For 20 years I had chronic liver complaint, which led to such a severe case of jaundice that even my finger nails turned yellow; when my doctor prescribed Electric Bitters, which cured me and have kept me well for eleven years." Sure cure for Biliousness, Neuralgia, Weakness and All Stomach, Liver, Kidney and Bladder derangements. A wonderful Tonic. At A. G. Luken & Co's Drug Store, 50 cents.

### CHICAGO MARKETS

(Publishers' Press)  
Chicago, Nov. 5.—Trading in all of the grain pits was exceedingly light at the opening today. The wheat market was steady on fair buying by commission houses, but the offerings were in sufficient volume to offset any bull movement.

The corn market was easy. The oats market was steady. The provisions market was easier, because of a decline in the price of live hogs.
