

## WAGGONER TELLS OF DREAD DISEASE

Inspector Declares Farmers Are More to Be Feared Than the Butchers.

SYSTEM CITY MAY GET.

IN CASE GOVERNMENT INSPECTION IS SECURED IT IS PROBABLE THAT FOUR MEN WILL BE ASSIGNED HERE.

In view of the fact that the citizens of this city are demanding government inspection for all meats sold and consumed in Richmond, brought about by the sickening discoveries of tuberculosis cattle in Wayne county; cattle which were brought to the market and slaughtered pens to be butchered and consumed by the people of this city, but which were caught in time by Dr. Waggoner, government inspector, his remarks along the line of tuberculosis are particularly interesting. This disease is considered the most dangerous that is found in cattle and other animals of the United States and from a pure food standpoint should be fought with might and main, not only by the people, but by the stock owners, dealers and breeders themselves. In speaking on the matter, Dr. Waggoner said:

Subject not Appreciated.

There are few if any subjects connected with animal husbandry upon which more has been written and published within recent years than tuberculosis. Notwithstanding this activity, in the discussion and investigation of the disease, there are few subjects upon which there is so great a difference of opinion, and there is none whose importance is so inadequately appreciated. It is unfortunate that in the first attempt to control the disease in the United States, measures were adopted by some state authorities which were so radical and harsh that they aroused the antagonism of the cattle owners, those persons who first of all should have been in sympathy with the movement. The question of the suppression of tuberculosis and the protection of the people against tuberculosis cattle, is not a question of sentiment, but one of fact and it should be examined as a business proposition.

Entire Community Affected.

The breeders of cattle have found that untold losses have resulted from the ravages of disease. They have had vast herds of fine and valuable animals destroyed through tuberculosis. Besides the influence upon the herds and the owners of the animals, tuberculosis has an influence upon the community. A herd of animals is not bred for the use of the owner but the primary object is to produce, and sell dairy products, meat and stock animals to other people. Is it right to sell a tuberculosis animal to go into another owner's herd when the disease is likely to spread and to damage that herd? Is it right to sell tuberculosis cattle and hogs for slaughter, when we know that many of these animals are slaughtered in establishments where there is no inspection and that diseased carcasses may consequently be used for human food? Is it right to sell the milk from tuberculosis cattle, knowing that it may be used for the nourishment of the most delicate children, when such milk frequently contains tuberculosis bacillus.

Not Through the Lungs.

The lungs of the human are the points to which the tuberculosis bacilli generally make their way and it is thus that many people, and even physicians are inclined to think they are breathed into the lungs from the dust and other sources. I do believe this is the case as experiments have tended to show that the ingestion of

If you want help or a situation, or want to buy or sell, use the Palladium Want column.

Some men can give very much to help the cause along.

But they can pray, and talk and sing some good old rally song.

And some can give quite freely to bring this all about.

And when it's done there will be one great halleujah shout.

With such an institute built somewhere on Main street,

Where boys could meet at even time and each other kindly greet.

They could help each other greatly thus by talking or'e and or'e.

Of experience in the factory, in the office and the store.

Now then let's work together and the ball all help to roll!

You cannot tell, your work may help to save some precious soul.

And then in days and years to come you'll hear our young men say

God bless the men and women, who built this Y. M. C. A.

W. E. RUSSELL.

Value of Woods For Charcoal.

The different woods which are to be used in making charcoal may be estimated as to their relative value by this rule: Of the oaks, 100 parts will yield 29 parts of charcoal; the beech, 21; the elm, the apple and the white pine, 23; birch, 24; maple, 22; willow, 19; poplar, 20; hard pine, 22. All charcoal used in the manufacture of gunpowder is made from either willow wood or elder wood.

## MISS NELLIE WILLIAMS GOES TO FIRST PLACE AMONG WOMEN CLERKS IN CONTEST

tubercle bacilli is the real method through which tuberculosis infection reaches the lungs.

While many cases of tuberculosis undoubtedly have their origin through food directly or indirectly infected with fresh tuberculosis material from persons so afflicted, there are no means today by which persons are brought into closer contact with such fresh material than meat, milk and dairy products obtained from and in the environment of tuberculosis cows. We have no more active agent than tuberculosis cows, for the increase and persistence of tuberculosis among men. Man is constantly exposed to fresh tuberculosis material in a helpless way through his use of meat and dairy products, from tuberculosis cows and cows associated with tuberculosis cattle. It seems to me that we should feel no doubt regarding our plain duty, which is, no matter what other measures we adopt in our fight against tuberculosis, not to neglect one of the chief, if not the most important source of infection—tuberculosis meat and dairy products."

Should Protect Butchers.

Dr. Waggoner also stated that if the city council passes an ordinance for government inspection and the butchers go to the expense of preparing for it, the Richmond butchers against all others should be protected first, last and all the time. They deserve it and should have the protection due them. Outside meats should be barred unless they have the government stamp upon them.

In case government inspection of the meat products becomes a reality in Richmond, it is probable that at least four men will be assigned here, a livestock inspector, a man to pass his opinion on foot and an experienced stock man; two meat inspectors, practical butchers who are thoroughly acquainted with the interior organs of cattle and their proper condition; and an assistant veterinarian. Dr. Waggoner will have charge of the whole corps and will pass definitely on all diseased cases found in the different butchering establishments. Dr. Waggoner answers the report that he is working for more money for disclosing the tuberculosis cases, he stating that if Richmond secured government inspection he would have all the more work to do and no more pay for it.

Dr. Waggoner stated during the course of his conversation that the butchers are not to be feared so much at present. It is not the butchers but those farmers and dealers who place their cattle with the butchers when they well know they are diseased, but hope that they will avoid detection before and after slaughtering.

The meat question is one that is a large factor in the fight for pure food and Dr. Waggoner's statements will no doubt carry much weight.

A most profitable venture to anyone. The lots in the new additions to the city will sell like hot cakes."

## REAL ESTATE BEST IN CITY'S HISTORY

Business in This Line and in The Building Line Is of the Most Satisfactory Kind.

ARE NOT ENOUGH HOUSES.

CARPENTERS ARE IN DEMAND AND HOUSES ARE BEING RENTED BEFORE THE PLANS HAVE BEEN COMPLETED.

The real estate and building business in Richmond is today the best in the history of the city. There are not enough houses to meet the constant demand and real estate is booming in all parts of town. Carpenters are in the greatest demand and houses are being rented before the plans have been completed.

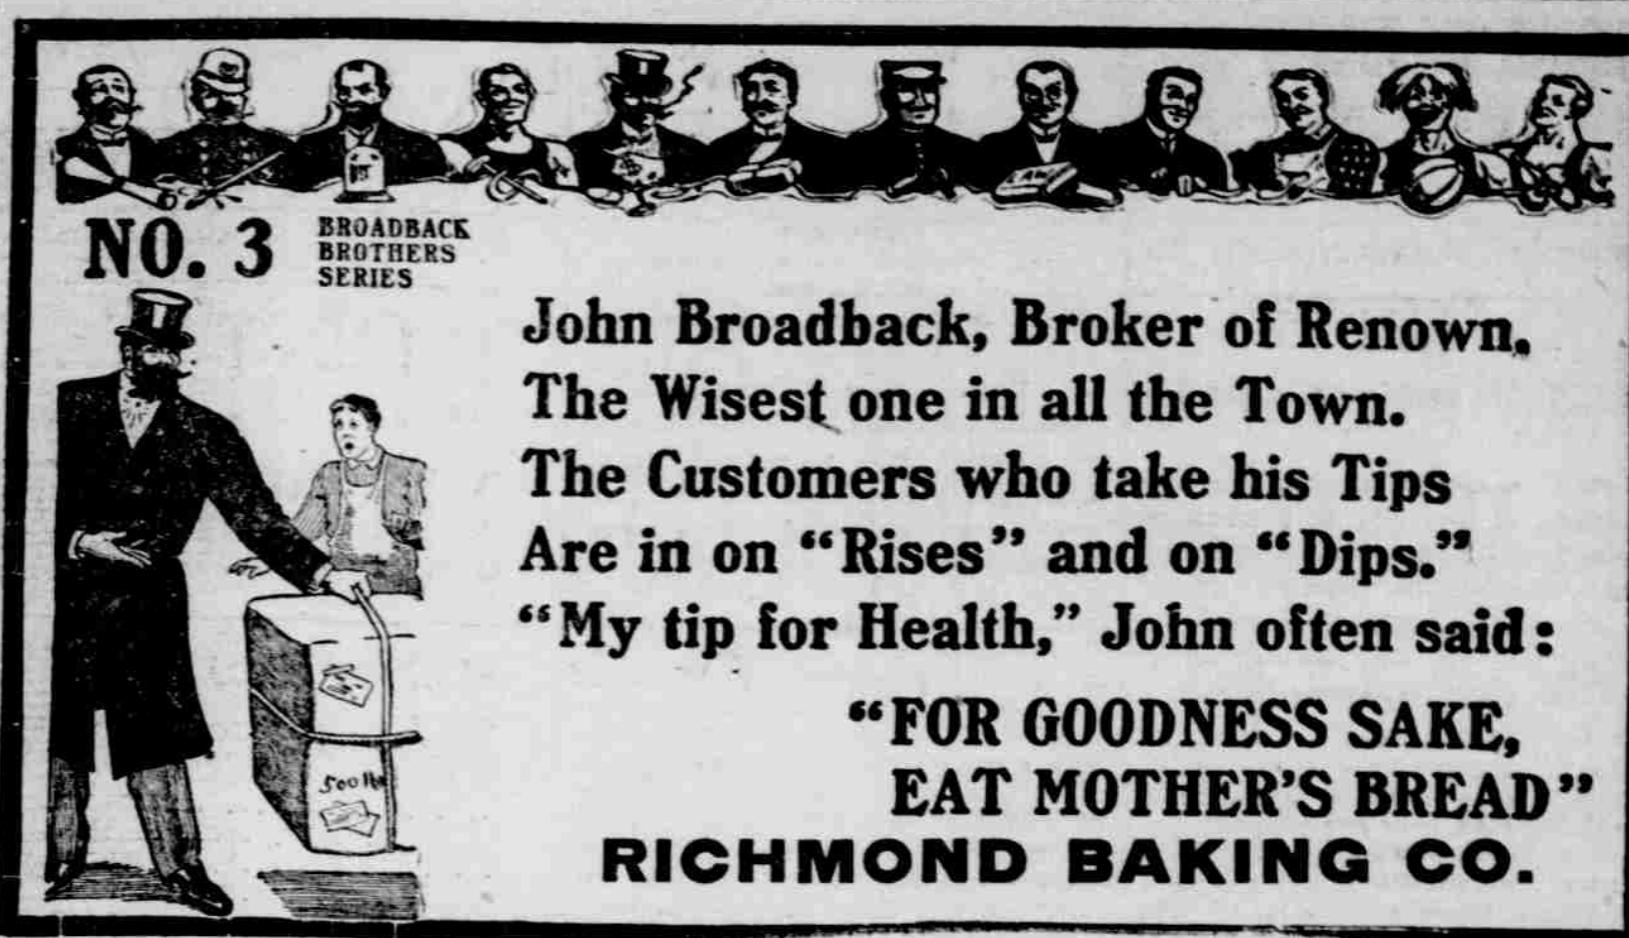

T. H. Woodhurst, one of the best known real estate men in the city, states that this is his best year since he has been in the real estate business. "It is a fact that for some time I have received nearly one hundred calls a week from people who are seeking houses for rent," said Mr. Woodhurst. "At the present time I have no houses left on my list which rent for \$10, \$12 and \$15 per month and I have very few houses left that rent for more than this, and they have all been spoken for by a number of people."

New Families Coming.

"Several of the larger factories in the city are being enlarged and additional men are being employed. Those mechanics who come here from various places to accept employment desire to locate their families here and other real estate agents and myself have been besieged by these mechanics for houses. The result is that all of the houses that rent for reasonable sums have been taken.

"To meet the demand for rentable houses a big building boom has been started and dwellings are being put up in every part of the city," continued Mr. Woodhurst. "Building in West Richmond is especially active. At the present time six dwellings are under construction on Randolph street in two blocks. The city is certainly growing and growing fast and the investment in local real estate right now would be

a most profitable venture to anyone. The lots in the new additions to the city will sell like hot cakes."

904-906 MAIN STREET, RICHMOND, IND.

CENTERVILLE, IND.

Centerville, Ind., April 27.—A demonstration of the National Biscuit company was given by Mr. G. W. Horton, sales agent on Saturday at the store of Dunbar and Son.

Mr. and Mrs. M. Early of Arba, came on Saturday to spend a week with Mr. and Mrs. James W. Horn, and other relatives here.

Elisha Non of Liberty returned home on Monday after a short visit to his nephew, the Rev. Aaron Napier.

Mrs. James W. Nichols entertained at dinner on Saturday Mrs. Martha Crabb of near Centerville.

Miss Mary Clark was the guest of the week at Dunreath and Carter.

Mr. and Mrs. Charles Marting of Richmond were guests of Mr. and Mrs. Harry Ryan on Sunday afternoon.

George Babcock of Cambridge City visited his grandmother, Mrs. James W. Nichols on Friday.

A Bit of Green.

People who have no skill with house plants or no time to attend to them may nevertheless have a refreshing bit of green with no trouble at all. English ivy grows freely in water, and a few slips in bottles concealed behind pictures and mirrors will be a source of great pleasure through an entire winter. Fill the bottles with fresh water once in a while and direct the course of the new growth by common pins stuck in the wail, and that is all the care required for a highly decorative frieze of graceful garlands.—Harper's Bazaar.

By far the most important process of engraving is etching, and Rembrandt is accounted the greatest etcher the world has ever known.

Ten thousand pounds of elderdown are collected each year in Iceland. Of this amount about 7,000 pounds are exported to other countries.

## Historic Trip

From the standpoint of historic interest the Palladium and Sun-Telegram trip to Jamestown could not be surpassed. Among the spots which will be visited are Fortress Monroe, Old Point Comfort, New Port News and Portsmouth. Who will be the six to see these sights?

## Still Another Week of This Remarkable Fire and Smoke Sale

And still the low range of prices go on as they have before. Every article in our store will be sold at a great reduction in price, and every article sold will be guaranteed to purchaser as **ABSOLUTELY PURE** and free from any adulteration. All these goods have been carefully inspected by one of the foremost pharmacists in the country, and you run no chances whatever when buying any of them. All last week crowds took advantage of this money-saving opportunity, and every day our store was filled with bargain seekers.

Come In Tomorrow.

Get Our Prices, Everything Goes at 50 Per Cent. Reduction.
