DRINKING WATER IS NOT AT FAULT

**Typhoid Fever and Cholera
Epidemics Not Traceable
To the Water Cause.**

A LONG INVESTIGATION.

**RESULT OF EXPERIMENTS LEADS
TO STATEMENT WATER NEVER
HAS BEEN KNOWN TO CAUSE
DISEASE.**

Boston, Mass., Sept. 5.—That ty-
phoid fever and cholera epidemics are
not caused by polluted drinking water
is one of a number of statements in a
book which the city of Lynn is pub-
lishing, and which will be issued this
week. The book was written by Ed-
win F. Dweilley, a Lynn engineer, who
last May was hired by the Lynn City
Council to investigate the Lynn water
supply.

After four months of investigation,
Mr. Dweilley, in 260 pages of type-
written manuscript, claims that Lynn
is needlessly alarmed about the water;
that it is perfectly healthful and bet-
ter than that which the metropolitan
system furnishes; that there is not
the slightest danger of an epidemic
from it, and that sanitation experts
have worked the epidemic bogey to
such an extent that cities and towns
have needlessly spent millions of dol-
lars to prevent what never existed.

Agitated for Years.

The Lynn water supply has been a
subject of agitation for years. The
present water board favors installing
a slow sand filtration plant to im-
prove it. The board hired W. S. Johnson,
of Boston, an expert and former mem-
ber of the State Board of Health, to
investigate the supply, and his report
recommended a filtration plant, saying
that the supply was always in danger
of contamination by typhoid germs and
might cause an epidemic. Not satis-
fied with this report, the City Council
hired Engineer Dweilley.

Dweilley's report, which is to be pub-
lished in book form, because it is too
long to read aloud before the City
Council, attacks Johnson and other
sanitation experts, and goes at length
into the typhoid fever question. The
statement that water has never been
known to cause typhoid is backed up
at length.

HOSPITALS PLAN \$1 PER YEAR RATE

**Scheme Adopted in Brooklyn
By Enterprising Man of
Experience.**

THREATENS MANHATTAN.

**PHYSICIANS UP IN ARMS AT VISION
OF REDUCTION OF THEIR
PRACTICE AND LOSS OF FI-
NANCE.**

New York, Sept. 5.—While Brooklyn
physicians are up in arms against the
operations of the newly organized \$1
a year plan for doctoring as advanced
by medical service company, the Kings
County Medical society will take no ac-
tion, preferring to ignore the aspira-
tions of the new company.

"They can squeal all they like," said
the manager of the medical service
company. "I am operating within the
law and will so continue. Just wait
until I get into Manhattan after I
have established my stations in Brook-
lyn."

"Three thousand eight hundred
families have signed already for a dol-
lar a year from this one Union street
station, and I propose to establish ten
such stations in Brooklyn. Then we
will start operations in Manhattan
and broaden out until we have taken
in the entire city."

"Our contracts calls for treatment of
every member of a family, no matter
how large the family. Then we com-
pound the prescriptions of the doctors
in our employ and the charge for med-
icines is only 25 cents."

"I am going to put the 10-cent-a-
week concerns out of business, too.
Ten cents a week is \$5.20 a year. We
do the same work for \$1 a year. One
of these 10 cent companies recently
sold \$100,000 worth of its stock, so
good an investment is it considered."

CEMENT WALKS ARE MADE BY MACHINE

**Hopper Feeds Mortar While
Mold Travels.**

A machine consisting of a traveling
mold and of a winch for pulling it
along, is now being used in construct-
ing cement sidewalks. The concrete
for the base of the sidewalk is shovel-
ed or dumped into the front part of
the mold, and the finishing mortar is
fed into the hopper in the middle. This
hopper is so designed that it feeds a
thin layer of mortar onto the con-
crete base as the mold travels forward.
Thus a complete and perfect sidewalk
is delivered at the rear end of the ma-
chine.—Popular Mechanic

GUT PROBLEM MUST BE SOLVED TO SAVE ROADS

**Ten Commandments of Road
Builder May Be Summed Up
Succinctly in One Small
Word "Drainage."**

**MANY THINGS MUST BE
TAKEN INTO FORETHOUGHT**

**Bulletin Now in Preparation by
United States Office of Pub-
lic Roads Tells About Con-
crete Drains.**

With an average of 27,000 tons of
water falling in the form of rain on
each mile of public road in the United
States annually, it is scarcely to be
marveled at that the ten command-
ments of the road builder can be sum-
med up succinctly in the word "drain-
age."

The saying has truth for a basis, as
good drainage is the primary requisite
for all roads. Even in sand roads this
holds true, for there "good drainage"
means such as will safely remove the
storm water without erosion or gully-
ing and still retain the surface mois-
ture.

To secure good drainage one must
take into consideration both the sur-
face water and the underground wa-
ter. The surface water must be re-
moved quickly and completely and
without subjecting the road to exces-
sive scour or erosion. For this reason,
the center of the road should be raised
and the slope towards the side
ditches should be from one-half to one
inch to each foot distance, or so that
the water will run freely to the side
ditches and not flow down the road
or remain in puddles on the roadway.
The side ditches should be of ample
size to care for the severest storms
with a fall of not less than 6 inches
to each 100 feet. Frequent and am-
ple cross drains should be constructed
and every opportunity taken to
get the water away from the road as
quickly as possible. Any road along
which you see water standing in the
side ditches or on which puddles of
water have collected or which has
been badly gullied and eroded by the
rains has poor drainage and is in need
of immediate attention. In fact earth
roads nearly always require a little
attention after each rain. The split-
log drag is essentially a tool to main-
tain good drainage on our earth roads
and should be used after each rain.
On a heavy clay or gumbo soil the
drag when properly used tends to pud-
dle the road surface, keep it free from
ruts, dense, smooth and hard, thus
securing the best surface drainage
possible.

But in many places the underground
water is too near the surface and
must be removed before a good road
will be possible. This means that

some form of sub-drainage must be
resorted to, usually tile drains, of clay
or concrete. Water from whatever
source must be gotten rid of effective-
ly, for water plus clay or gumbo in-
variably equals mud when mixed in
spring and summer. Water becomes
ice in winter and as water in freezing
expands one-eighth its volume, the
road heaves out of shape and when
the ice melts the road disappears be-
neath the rising tide of mud constan-
tly fed by rains, melting snows and
underground springs.

In seepy and boggy places the sub-
drainage in order to be fully effective
should lower the water level to not
less than three feet below the road
surface. If tiles are used they should
be carefully laid, true to grade. Most
failures in tile drainage can be attrib-
uted to carelessness in laying, or too
flat grade. Tile less than 4 inches in
diameter should rarely be used, nor
should a grade of less than 6 inches
to the 100 feet be used unless abso-
lutely necessary. In a very dense soil,
it is always advisable to cover the
tile to at least a depth of 6 to 12 in-
ches with coarse sand or fine gravel.
Care should always be taken to secure
a free outlet for the drains and to pro-
tect the outlet with a concrete bulk-
head or catchbasin, which can always
be kept clean and the outlet free.

The kind of tile to be used depends
on local conditions. Concrete tile if
properly made are equally as good as
clay tile. Which kind to use is en-
tirely a local question of dollars and
cents. If concrete tile can be made
more cheaply than clay tile can be had
use concrete; if not, use clay tile.

One great advantage of the concrete
tile is that they can be easily made
by the local users at or near the place
where they are to be placed, so that
the freight charges are dispensed with
as well as the large breakage losses
due to handling. Placed in the ground
both are durable. If concrete is used,
great care should be taken, to see that
a good grade of Portland cement is
selected, and that the drains are prop-
erly constructed. The impression,
which prevails to some extent, that
tile disintegrates is erroneous.

A bulletin is now in course of pre-
paration by the United States office
of public roads telling how to make
concrete drains. This bulletin will
treat the subject fully, explaining
carefully every point that may arise
in making drain pipes and culverts.

NEW RECORD IN WORK ON CANAL

**Immense Quantity of Dirt Re-
moved During July.**

The grand total of Panama Canal
excavation during the month of July
was 3,168,840 cubic yards, all of which
except 122,884 cubic yards was taken
from the Canal prism. This estab-
lishes a new record for excavation in
the rainy season, being 108,533 cubic
yards more than the record for June,
and 311,430 cubic yards short of the
highest dry season record, that of
March, 1908. Compared with July,
1907, it shows an increase of 2,105,
114 cubic yards.

SHOWING PROGRESS OF PHOTOGRAPHY

**Costa Rica Most Progressive
State Between Mexico
And Panama.**

BETTER TRADE CONDITIONS

Figures lately made available show
that Costa Rica is the most progres-
sive and prosperous state between
Mexico and Panama. Notwithstanding
the fact that of the 4,200,000 in-
habitants of Central America only
323,000 dwell in the orderly little re-
public of Costa Rica, this state is
credited with 30 per cent of the for-
eign commerce of the five Central
American republics, which now
amounts to some \$53,000,000 gold val-
ue. Guatemala, with six times as
many people as Costa Rica, ranks be-
low her in foreign trade.

The per capita of foreign commerce
done in the Central American coun-
tries is as follows:
Guatemala \$ 8.00
Nicaragua 13.50
Honduras 10.00
Salvador 10.00
Costa Rica 50.00

This tells the story of trade con-
ditions in Central America, and the re-
cord of Costa Rica will commend that
country to the attention of the outside
world.

NICARAGUA IN TOO HAS STRINGENT LAW

**Chemical Laboratory at Na-
tion's Capital.**

The government of Nicaragua has
enacted a law regulating the import-
ation and sale of patent medicines and
prohibiting the importation of adulter-
ated or misbranded food products or
drugs. This law provides also for the
establishment of a chemical laboratory
in the capital of the republic for the
examination of all products under
suspicion.

HEALTH IN CUBA MAY BE IMPROVED

**Department Undertakes En-
forcement of Rules.**

The health department in Cuba has
given special attention to the exter-
mination of mosquitoes, to proper regu-
lation of the milk supply, and adequate
inspection is made of such establish-
ments as are devoted to the prepara-
tion of food products, including ice,
mineral waters, confectionery, etc.
Chemical analysis of beers and other
liquors is enforced.

NEW PROCESS OF PHOTOGRAPHY

**Discovery Made by Parisian
Makes Perspective and
Relief Both Possible.**

GLASSES ARE COMBINED.

**INGENIOUS DEVICE WILL GO A
LONG WAY TOWARD MEETING
ONE OF THE GREATEST NEEDS
OF ART.**

A process of photography which
gives both perspective and relief, a
process which will not only give pho-
tography new possibilities, but which
will actually open a new field both to
science and to art, has been discovered
by Professor Lippman of Paris, who
had already made himself famous by
inventions in connection with color
photography.

The construction of his photograp-
hic apparatus, the professor explains,
presents many analogies with that of
the human eye and the eyes of mam-
mals generally, but he compares it, for
ready understanding, to the stereo-
scope. The stereoscope is an optical
instrument for giving to pictures the
appearance of solid forms as seen in
nature. It combines in one, through a
bending of the rays of light, two pic-
tures, taken for the purpose, from
points of view a little way apart. It
is furnished with two eye glasses, and
by refraction or reflection, the pictures
are superimposed so as to appear as
one to the observer.

Now the eye of the coleoptera is
composed of a great number of small
facets—practically a multiplied stereo-
scope. Each facet reproduces the
whole of the object or landscape be-
fore it, but from its special angle. Taken
together, they give the drop press,
which cuts it into the outline form of
a spoon, though from this press it
comes out still flat.

Then in another press the bowl of
the spoon is formed, and then in still
another the handle, and so at last you
have the spoon in its complete spoon
shape, in steel, ready now to be tin-
plated by dipping it in molten tin—
Philadelphia Record.

POISONERS HAVE REGULAR TRADE

**New York Coroner Now on
Trail Seeking Vengeance.**

"I am on the trail of a band of pro-
fessional poisoners, the members of
which have, within the last few years,
murdered a number of persons and
drugged and robbed many more."

The Coroner secured the names of
three persons and they were held for
the grand jury.

AUTO CLUB AGAINST FAST SPEEDING

**Takes Action to Reduce Num-
ber of Accidents.**

New York, Sept. 5.—The Automobile
club of America has made its an-
nouncement against speeding, accord-
ing to a resolution passed by the board
of governors in the form of a special
notice to its members, calling attention
to the great number of serious and fa-
tal accidents that have recently occur-
ed.

Special attention is directed to the
conditions in Nassau county, L. I.,
where the supervisors propose to stop
reckless driving by trying those ar-
rested in the regular court terms after
indictments and punishment repeated
offenders by imprisonment.

TO INSURE POOR.

**Novel Plan Proposed by Trustees of
Sage Estate.**

New York, Sept. 5.—Backed by the
millions of the Sage foundation, to
which Mrs. Russell Sage has already
turned over \$10,000,000 for alleviating
the economic conditions of the poor,
trustees of the fund are considering a
plan for providing life insurance at
or below cost to those who cannot af-
ford to pay the rates charged by the
big companies.
