

often suffered by employees in consequence of the custom of courts issuing temporary injunctions without notice to them and punishing them for contempt of court in instances where, as a matter of fact, they have no knowledge of any proceedings. Outside of organized labor there is a widespread feeling that this system often works great injustice to wage-workers when their efforts to better their working condition result in industrial disputes. A temporary injunction procured ex parte may, as a matter of fact, have all the effect of a permanent injunction in causing disaster to the wage-workers' side in such a dispute. Organized labor is chafing under the unjust restraint which comes from repeated resort to this plan of procedure. Its discontent has been unwisely expressed and often improperly expressed, but there is a sound basis for it, and the orderly and law-abiding people of a community would be in a far stronger position for upholding the courts if the undoubtedly existing abuses could be provided against.

Such proposals as those mentioned above as advocated by the extreme labor leaders contain the vital error of being class legislation of the most offensive kind, and even if enacted into law I believe that the law would rightly be held unconstitutional. Moreover, the labor people are themselves now beginning to invoke the use of the power of injunction. During the last ten years, and within my own knowledge, at least fifty injunctions have been obtained by labor unions in New York city alone, and the use of them to prevent the union label (a "property right"), but some being obtained for other reasons against employers. The power of injunction is a great equitable remedy which should on no account be destroyed. But safeguards should be erected against its abuse. I believe that some such provisions as those I advocated a year ago for checking the abuse of the issuance of temporary injunctions should be adopted. In substance, provision should be made that no injunction or temporary restraining order be granted otherwise than on the basis of irreparable injury would otherwise result, and in such case a hearing on the merits of the order should be had within a short fixed period, and if not then continued after hearing it should forthwith lapse. Decisions should be rendered immediately and the chance of delay minimized in every way. Moreover, I believe that the procedure should be sharply defined and the judge required minutely to state the particulars both of his action and of his reasons therefor, and that the court should be required, ex parte and investigate the same.

The chief lawmakers of our country may be and often are the judges, because they are the final seat of authority. Every time they interpret contract, property, vested rights, due process of law, liberty, they necessarily enact into law parts of a system of social philosophy, and, as such interpretation is fundamental, they give direction to all lawmaking. The decisions of the courts on economic and social questions depend upon their economic and social philosophy, and for the peaceful progress of our people during the twentieth century we shall owe most to those judges who held to a twentieth century economic and social philosophy and not to a long outgrown philosophy which was itself the product of primitive economic conditions. Of course a judge's views on progressive social philosophy are entirely second in importance to his possession of a high and fine character, which means the possession of such elementary virtues as honesty, courage and fair-mindedness. The judge who owes his election to pandering to demagogic sentiments or class hatreds and prejudices and the judge who owes either his election or his appointment to the money or the favor of a great corporation are alike unworthy to sit on the bench, are alike traitors to the people, and no profundity of legal learning or correctness of abstract conviction on questions of public policy can serve as an offset to such shortcomings. But it is also true that judges, like executives and legislators, should hold sound views on the questions of public policy which are of vital interest to the people.

The legislators and executives are chosen to represent the people in enacting and administering the laws. The judges are not chosen to represent the people in this sense. Their function is to interpret the laws. The legislators are responsible for the laws, the judges for the spirit in which they interpret and enforce the laws. We stand aloof from the reckless agitators who would make the judges mere pawns of popular prejudice and passion, and we stand aloof from those equally unwise partisans of reaction and privilege who deny the proposition that, inasmuch as judges are chosen to serve the interests of the whole people, they should strive to find out what those interests are and, so far as they conscientiously can, endeavor to give effect to popular conviction when deliberately and duly expressed by the lawmaking body. The courts are to be highly commended and staunchly upheld when they set their faces against wrongdoing or tyranny by a majority, but they are to be blamed when they fail to recognize under a government like ours the deliberate judgment of the majority as to a matter of legitimate policy when duly expressed by the legislature. Such lawfully expressed and deliberate judgment should be given effect by the courts save in the extreme and exceptional cases where there has been a clear violation of a constitutional provision. Anything like frivolity or wantonness in upsetting such clearly taken governmental action is a grave offense against the republic. To protest against tyranny, to protect minorities from oppression, to nullify an act committed in a spasm of popular fury, is to render a service to the republic. But for the courts to arrogate to themselves functions which properly belong to the legislative bodies is all wrong and in the end works mischief. The people should not be permitted to pardon evil and slipshod legislation on the theory that the court will set it right. They should be taught that the right way to get rid of a bad law is to have the legislature repeal it and not to have the courts by ingenious law splitting nullify it. A law may be unwise and improper, but it should not for these reasons be de-

clared unconstitutional by a strained interpretation, for the result of such action is to take away from the people at large their sense of responsibility and ultimately to destroy their capacity for orderly self-restraint and self-government. Under such a popular government as ours, founded on the theory that in the long run the will of the people is supreme, the ultimate safety of the nation can only rest in training and guiding the people so that what they will shall be right and not in devising means to defeat their will by the technicalities of strained construction.

For many of the shortcomings of justice in our country our people as a whole are themselves to blame, and the judges and juries merely bear their share together with the public as a whole. It is discreditable to us as a people that there should be difficulty in convicting murderers or in bringing to justice men who as public servants have been guilty of corruption or who have profited by the corruption of public servants. The result is equally unfortunate whether due to hair-splitting technicalities in the interpretation of law by judges, to sentimentalism and class consciousness on the part of juries or to hysteria and sensationalism in the daily press. For much of this failure of justice no responsibility whatever lies on rich men as such. We who make up the mass of the people cannot shift the responsibility from our own shoulders. But there is an important part of the failure which has specially to do with inability to hold to proper account men of wealth who behave badly.

The chief breakdown is in dealing with the new relations that arise from the mutualism, the interdependence, of our time. Every new social relation begets a new type of wrongdoing—of sin, to use an old-fashioned word—and many years always elapse before society is able to turn this sin into crime which can be effectively punished at law. During the lifetime of the older men now alive the social relations have changed far more rapidly than in the preceding two centuries. The immense growth of corporations, of business done by associations and the extreme strain and pressure of modern life have produced conditions which render the public confused as to who its really dangerous foes are, and among the public servants who have not only shared this confusion, but by some of their acts have increased it, are certain judges. Marked inefficiency has been shown in dealing with corporations and in resettling the proper attitude to be taken by the public not only toward corporations, but toward labor and toward the social questions arising out of the factory system and the enormous growth of our great cities.

The huge wealth that has been accumulated by a few individuals of recent years, in what has amounted to a social and industrial revolution, has been as regards some of these individuals made possible only by the improper use of the modern corporation. A certain type of modern corporation, with its officers and agents, its many issues of securities and its constant consolidation with allied undertakings, finally becomes an instrument so complex as to contain a greater number of elements than under various judicial decisions lend themselves to fraud and oppression than any device yet evolved in the human brain. Corporations are necessary instruments of modern business. They have been permitted to become a menace largely because the governmental representatives of the people have worked slowly in providing for adequate control over them.

The chief offender in any given case may be an executive, a legislature or a judge. Every new social relation gives violent instead of gradual action or who advocates ill considered and sweeping measures of reform, especially if they are tainted with vindictiveness and disregard for the rights of the minority, is particularly blameworthy. The several legislatures are responsible for the fact that our laws are often prepared with slovenly haste and lack of consideration. Moreover, they are often prepared and still more frequently amended during passage at the suggestion of the very parties against whom they are afterward enforced. Our great clusters of corporations, huge trusts and fabulously wealthy multimillionaires employ the very best lawyers they can obtain to defend these laws, and after their passage, but they also employ a class of secret agents who seek under the advice of experts to render hostile legislation innocuous by making it unconstitutional, often through the insertion of what appear on their face to be drastic and sweeping provisions against the interests of the parties inspiring them, while the demagogues, the corrupt creatures who introduce blackmailing schemes to "strike" corporations and all who demand extreme and undesirable radical measures show themselves to be the worst enemies of the very public whose loud mouthed champions they profess to be. A very striking illustration of the consequences of carelessness in the preparation of a statute was the employers' liability law of 1906. In the cases arising under that law four out of six courts of first instance held it unconstitutional, six out of nine justices of the supreme court held that its subject matter was within the province of congressional action, and four of the nine justices held it valid. It was, however, adjudged unconstitutional by a bare majority of the court—five to four. It was surely a very slovenly piece of work to frame the legislation in such shape as to leave the question open at all.

Real damage has been done by the manifold and conflicting interpretations of the interstate commerce law. Control over the great corporations doing interstate business can be effective only if it is vested with full power in an administrative department, a branch of the federal executive, carrying out a federal law. It can never be effective if a divided responsibility is left in both the states and the nation. It can never be effective if left in the hands of the courts to be decided by lawsuits.

The courts hold a place of peculiar and deserved sanctity under our form of government. Respect for the law is essential to the permanence of our institutions, and respect for the law is largely conditioned upon respect for

the courts. It is an offense against the republic to say anything which can weaken this respect save for the gravest reason and in the most carefully guarded manner. Our judges should be held in peculiar honor, and the duty of respectful and truthful comment and criticism, which should be binding when we speak of anybody, should be especially binding when we speak of them. On an average they stand above any other servants of the community, and the greatest judges have reached the high level held by those few greatest patriots whom the whole country delights to honor. But we must face the fact that there are wise and unwise judges, just as there are wise and unwise executives and legislators. When a president or governor behaves improperly or unwisely the remedy is easy, for his term is short. The same is true with the legislator, although not to the same degree, for he is one of many who belong to some given legislative body, and it is therefore less easy to fix his personal responsibility and hold him accountable therefor. With a judge, who, being human, is also likely to err, but whose tenure is for life, there is no similar way of holding him to responsibility. Under ordinary conditions the only forms of pressure to which he is in any way amenable are public opinion and the action of his fellow judges. It is the last which is most immediately effective and to which we should look for the reform of abuses. Any remedy applied from without is fraught with risk. It is far better from every standpoint that the remedy should come from within. In no other nation would do the courts wield such vast and far-reaching power as in the United States. All that is necessary is that the courts as a whole should exercise this power with the far-sighted wisdom already shown by those judges who scan the future while they act in the present. Let them exercise this great power not only honestly and bravely, but with wise insight into the needs and fixed purposes of the people, so that they may do justice and work equity, so that they may protect all persons in their rights and yet break down the barriers of privilege, which is the foe of right.

Forests.

If there is any one duty which more than another we owe it to our children and our children's children to perform at once it is to save the forests of this country, for they constitute the first and most important element in the conservation of the natural resources of the country. There are, of course, two kinds of natural resources. One is the kind which can only be used as part of a process of exhaustion. This is true of mines, natural oil and gas wells and the like. The other, and of course ultimately by far the most important, includes the resources which can be improved in the process of wise use. The soil, the rivers and the forests come under this head. Any really civilized nation will use all of these three great national assets that the nation will have their benefit in the future. Just as a farmer, after all his life making his living from his farm, will, if he is an expert farmer, leave it as an asset of increased value to his son, so we should leave our national domain to our children increased in value and not worn out. There are small sections of our own country in the east and in the west, the Adirondacks, the White mountains and the Appalachians and in the Rocky mountains, where we can already see for ourselves the damage in the shape of permanent injury to the soil and the river systems which comes from reckless deforestation. It matters not whether this deforestation is due to the reckless cutting of timber, to the fires that inevitably follow such reckless cutting of timber or to reckless and uncontrolled grazing, especially by the great migratory bands of sheep, the unchecked wandering of which over the country means destruction to forests and disaster to the small homesteaders, the settlers of limited means.

Shortsighted persons, or persons blinded to the future by desire to make money in every way out of the present, sometimes speak as if no great damage would be done by the reckless destruction of our forests. It is difficult to have patience with the arguments of these persons. Thanks to our own recklessness in the use of our splendid forests, we have already crossed the verge of a timber famine in this country, and no measures that we now take can, at least for many years, undo the mischief that has already been done. But we can prevent further mischief being done, and it would be in the highest degree reprehensible to let any consideration of temporary convenience or temporary cost interfere with such action, especially as regards the national forests, which the nation can now at this very moment control.

All serious students of the question are aware of the great damage that has been done in the Mediterranean countries of Europe, Asia and Africa by deforestation. The similar damage that has been done in eastern Asia is less well known. A recent investigation into conditions in north China by Mr. Frank N. Meyer of the bureau of plant industry of the United States department of agriculture has incidentally brought to very striking fashion proof of the ruin that comes from reckless deforestation of mountains and of the further fact that the damage once done may prove practically irreparable. So important are these investigations that I herewith attach as an appendix to my message certain photographs showing present conditions in China. They show in vivid fashion the appalling desolation, taking the shape of barren mountains and gravel and sand covered plains, which immediately follows and depends upon the deforestation of the mountains. Not many centuries ago the country of northern China was one of the most fertile and beautiful spots in the entire world and was heavily forested. We know this not only from the old Chinese records, but from the accounts given by the traveler Marco Polo. He, for instance, mentions that in visiting the provinces of Shansi and Shensi he observed many plantations of mulberry trees. Now there is hardly a single mulberry tree in either of these provinces, and the culture of the silkworm has moved farther south, to regions of atmospheric moisture.

Change Brought by Deforestation.

As an illustration of the complete change in the rivers we may take Polo's statement that a certain river, the Hsiang Ho, was large and deep and the merchants ascended it from the sea with heavily laden boats. Today this river is simply a broad sandy bed, with shallow, rapid currents wandering hither and thither across it, absolutely un navigable. But we do not have to depend upon written records. The dry wells and the wells with water far below the former water mark bear testimony to the good days of the past and the evil days of the present. Wherever the native vegetation has been allowed to remain—as, for instance, here and there around a sacred temple or imperial burying ground—there are still huge trees and tangled jungle, fragments of the glorious ancient forests. The thick, matted forest growth formerly covered the mountains, their summits. All natural factors favored this dense forest growth, and as long as it was permitted to exist the plains at the foot of the mountains were among the most fertile on the globe, and the whole country was a garden. Not the slightest effort was made, however, to prevent the unchecked cutting of the trees or to secure reforestation. Doubtless for many centuries the tree cutting by the inhabitants of the mountains worked but slowly in bringing about the changes that have now taken place. Doubtless for generations the inroads were scarcely noticeable, but there came a time when the forest had shrunk sufficiently to make each year's cutting a serious matter, and from that time on the destruction proceeded with appalling rapidity, for of course each year of destruction rendered the forest less able to recuperate, less able to resist next year's inroad.

Mr. Meyer describes the ceaseless progress of the destruction even now, when there is so little left to destroy. Every morning men and boys go out armed with mattock or ax, scale the steep mountain sides and cut down and grub out, root and branch, the small trees and shrubs still to be found. The big trees disappeared centuries ago, so that now one of these is never seen save in the neighborhood of temples, where they are artificially protected, and even here it takes all the watch and care of the tree loving priests to prevent their destruction. Each family, each community, where there is no common care exercised in the interest of all of them to prevent deforestation, finds its profit in the immediate use of the fuel which would otherwise be used by some other family or some other community. In the total absence of regulation of the matter in the interest of the whole people each small group is inevitably pushed into a policy of destruction which cannot afford to take thought for the morrow. This is just one of those matters which it is fatal to leave to unsupervised individual control. The forests can only be protected by the state, by the nation, and the liberty of action of individuals must be conditioned upon what the state or nation determines to be necessary for the common safety.

The lesson of deforestation in China is a lesson which mankind should have learned many times already from what has occurred in other places. Denudation leaves naked soil, then gully cutting cuts down to the bare rock, and meanwhile the rock waste buries the bottom lands. When the soil is gone men must go, and the process does not take long.

The ruthless destruction of the forests in northern China has brought about or has aided in bringing about desolation, just as the destruction of the forests in central Asia led in bringing ruin to the once rich central Asian lands, just as the destruction of the forests in northern Africa helped toward the ruin of a region that was a fertile granary in Roman days. Short-sighted man, whether barbaric, semi-civilized or what he mistakenly regards as fully civilized, when he has destroyed the forests has rendered certain the ultimate destruction of the land itself. In northern China the mountains are now such as are shown by the accompanying photographs, absolutely barren peaks. Not only have the forests been destroyed, but because of their destruction the soil has been washed off the naked rock. The terrible consequence is that it is impossible now to undo the damage that has been done. Many crops of wheat have in past years been sown and again collect or could be made to collect in sufficient quantity once more to support the old time forest growth. In consequence the Mongol desert is practically extending eastward over northern China. The climate has changed and is still changing. It has changed even within the last half century as the work of tree destruction has been consummated. The great masses of arboreal vegetation on the mountains formerly absorbed the heat of the sun and sent up currents of cool air which brought the moisture laden clouds lower and forced them to precipitate in rain a part of their burden of water. Now, where there is no vegetation the barren mountains scorched by the sun, send up currents of heated air which drive away instead of attracting the rain-clouds and cause their moisture to be disseminated. In consequence, instead of the regular and plentiful rains which existed in these regions of China when the forests were still in evidence, the unfortunate inhabitants of the deforested lands now see their crops wither for lack of rainfall, while the seasons grow more and more irregular, and as the air becomes drier certain crops refuse longer to grow at all.

That the world is drying out faster than formerly is shown by the fact that the level of the wells all over the land has sunk perceptibly, many of them having become totally dry. In addition to the resulting agricultural distress, the water courses have changed. Formerly they were narrow and deep, with an abundance of clear water the year around, for the roots and humus of the forests caught the rainwater and let it escape by slow, regular seepage. They have now become broad, shallow streams in which muddy water trickles in slender currents during the dry seasons, while when it rains there are freshets, and roaring muddy torrents come tearing down, bringing disaster and destruction everywhere. Moreover, these floods and freshets, which diversify the general dryness,

wash away from the mountain sides and either wash away or cover in the valleys the rich fertile soil which it took tens of thousands of years for nature to form, and it is lost forever, and until the forests grow again it cannot be replaced. The sand and stones from the mountain sides are washed loose and come rolling down to cover the arable lands, and in consequence throughout this part of China many formerly rich districts are now sandy wastes, useless for human cultivation and even for pasture. The cities have been, of course, seriously affected, for the streams have gradually ceased to be navigable. There is testimony that even within the memory of men now living there has been a serious diminution of the rainfall of northeastern China. The level of the Singari river, in northern Manchuria, has been sensibly lowered during the last fifty years, at least partly as the result of the indiscriminate cutting of the forests forming its watershed. Almost all the rivers of northern China have become uncontrollable and very dangerous to the dwellers along their banks as a direct result of the destruction of the forests. The journey from Peking to Jehol shows in melancholy fashion how the soil has been washed away from whole valleys, so that they have been converted into deserts.

In northern China this disastrous process has gone on so long and has proceeded so far that no complete remedy could be applied. There are certain mountains in China from which the soil is gone so utterly that only the slow action of the ages could again restore it, although of course this could be done to prevent the still farther eastward extension of the Mongolian desert if the Chinese government would act at once. The accompanying cuts from photographs show the inconceivable desolation of the barren mountains in which certain of these rivers rise—mountains, be it remembered, which formerly supported dense forests of larches and firs, now unable to produce any wood and because of their condition a source of danger to the whole country. The photographs also show the same rivers after they have passed through the mountains, the beds having become broad and sandy because of the deforestation of the mountains. One of the photographs shows a caravan passing through a valley. Formerly, when the mountains were forested, it was thickly peopled by prosperous peasants. Now the floods have carried destruction all over the land and the valley is a stony desert. Another photograph shows a mountain road covered with the stones and rocks that are brought down in the rainy season from the mountains which have already been deforested by human hands. Another shows a pebbly river bed in southern Manchuria where what was once a great stream has dried up owing to the deforestation in the mountains. Only some scrub wood is left, which will disappear within a half century. Yet another shows the effect of one of the washouts, destroying an arable mountain side, these washouts being due to the removal of all vegetation, yet in this photograph the foreground shows that reforestation is still a possibility in places.

What has thus happened in northern China, what has happened in central Asia, in Palestine, in north Africa, in parts of the Mediterranean countries of Europe, will surely happen in our country if we do not exercise the wise foresight which should be one of the chief marks of any people calling itself civilized. Nothing should be permitted to stand in the way of the preservation of the forests, and it is criminal to permit individuals to purchase a little gain for themselves through the destruction of forests when this destruction is fatal to the well being of the whole country in the future.

Inland Waterways.

Action should be begun forthwith, during the present session of congress, for the improvement of our inland waterways—action which will result in giving us not only navigable, but navigated rivers. We have spent hundreds of millions of dollars upon these waterways, yet the traffic on nearly all of them is steadily declining. This condition is the direct result of the absence of any comprehensive and farseeing plan of waterway improvement. Obviously we cannot continue thus to expend the revenues of the government without return. It is poor business to spend money for inland navigation unless we get it.

Inquiry into the condition of the Mississippi and its principal tributaries reveals very many instances of the utter waste caused by the methods which have hitherto obtained for the so called "improvement" of navigation. A striking instance is supplied by the "improvement" of the Ohio, which, begun in 1824, was continued under a single plan for half a century. In 1875 a new plan was adopted and followed for a quarter of a century. In 1902 still a different plan was adopted and has since been pursued at a rate which only promises a navigable river in from twenty to a hundred years longer.

Such shortsighted, vacillating and futile methods are accompanied by decreasing water borne commerce and increasing traffic congestion on land, by increasing floods and by the waste of public money. The remedy lies in abandoning the methods which have so signally failed and adopting new ones in keeping with the needs and demands of our people.

In a report on a measure introduced at the first session of the present congress the secretary of war said, "The chief defect in the methods hitherto pursued lies in the absence of executive authority for originating comprehensive plans covering the country or natural divisions thereof." In this opinion I heartily concur. The present methods not only fail to give us inland navigation, but they are injurious to the army as well. What is virtually a permanent detail of the corps of engineers to civilian duty necessarily impairs the efficiency of our military establishment. The military engineers have undoubtedly done efficient work in actual construction, but they are necessarily unsuited by their training and traditions to take the broad view and to gather and transmit to the congress the commercial and industrial information and forecasts upon which waterway improve-

ment must always so largely rest. Furthermore, they have failed to grasp the great underlying fact that every stream is a unit from its source to its mouth and that all its uses are interdependent. Prominent officers of the engineer corps have recently even gone so far as to assert in print that waterways are not dependent upon the conservation of the forests about their headwaters. This position is opposed to all the recent work of the scientific bureaus of the government and to the general experience of mankind. A physician who disbelieved in vaccination would not be the right man to handle an epidemic of smallpox, nor should we leave a doctor skeptical about the transmission of yellow fever by the stegomyia mosquito in charge of sanitation at Havana or Panama. So with the improvement of our rivers. It is no longer wise or safe to leave this great work in the hands of men who fail to grasp the essential relations between navigation and general development and to assimilate and use the central facts about our streams.

Until the work of river improvement is undertaken in a modern way it cannot have results that will meet the needs of this modern nation. These needs should be met without further dilly-dallying or delay. The plan which promises the best and quickest results is that of a permanent commission authorized to co-ordinate the work of all the government departments relating to waterways and to frame and supervise the execution of a comprehensive plan. Under such a commission the actual work of construction might be entrusted to the reclamation service or to the military engineers acting with a sufficient number of civilians to continue the work in time of war, or it might be divided between the reclamation service and the corps of engineers. Funds should be provided from current revenues if it is deemed wise, otherwise from the sale of bonds. The essential thing is that the work should go forward under the best possible plan and with the least possible delay. We should have a new type of work and a new organization for planning and directing it. The time for playing with our waterways is past. The country demands results.

National Parks.

I urge that all our national parks adjacent to national forests be placed completely under the control of the forest service of the agricultural department, instead of leaving them, as they are now, under the interior department and policed by the army. The congress should provide for superintendents with adequate corps of first class civilian scouts or rangers and, further, place the road construction under the superintendent instead of leaving it with the war department. Such a change in park management would result in economy and avoid the difficulties of administration which now arise from having the responsibility of care and protection divided between different departments. The need for this course is peculiarly great in the Yellowstone park. This, like the Yosemite, is a great wonderland and should be kept as a national playground. In both all wild things should be protected and the scenery kept wholly unmarred.

I am happy to say that I have been able to set aside in various parts of the country small, well chosen tracts of ground to serve as sanctuaries and nurseries for wild creatures.

Denatured Alcohol.

I had occasion in my message of May 4, 1906, to urge the passage of some law putting alcohol used in the arts, industries and manufactures upon the free list—that is, to provide for the withdrawal free of tax of alcohol which is to be denatured for those purposes. The law of June 6, 1906, and its amendment of March 2, 1907, accomplished what was desired in that respect, and the use of denatured alcohol as intended is making a fair degree of progress and is entitled to further encouragement and support from the congress.

Pure Food.

The pure food legislation has already worked a benefit difficult to overestimate.

Indian Service.

It has been my purpose from the beginning of my administration to take the Indian service completely out of the atmosphere of party activity, and there has been steady progress toward that end. The last remaining stronghold of politics in that service was the agency system, which had seen its best days and was gradually falling to pieces from natural or purely evolutionary causes, but, like all such survivals, was decaying slowly in its later stages. It seems clear that its extinction had better be made final now, so that the ground can be cleared for larger constructive work on behalf of the Indians preparatory to their induction into the full measure of responsible citizenship. On Nov. 1 only eighteen agencies were left on the rolls. With two exceptions, where some legal questions seemed to stand temporarily in the way, these have been changed to superintendencies and their heads brought into the classified civil service.

Secret Service.

Last year an amendment was incorporated in the measure providing for the secret service which provided that there should be no detail from the secret service and no transfer therefrom. It is not too much to say that this amendment has been of benefit only to the criminal classes. If deliberately introduced for the purpose of diminishing the effectiveness of war against crime it could not have been better devised to this end. It forbade the practices that had been followed to a great or less extent by the executive heads of various departments for twenty years. To these practices we owe the securing of the evidence which enabled us to drive great lotteries out of business and secure a quarter of a million of dollars in fines from their promoters. These practices have enabled us to discover some of the most outrageous frauds in connection with the theft of government land and government timber by great corporations and by individuals. These practices have enabled us to get some of the evidence indispensable in order to secure the conviction of the wealthiest and most formidable criminals with whom the government has to deal,

both those operating in violation of the anti-trust law and others. The amendment in question was of benefit to no one excepting to these criminals, and it seriously hampers the government in the detection of crime and the securing of justice. Moreover, it not only affects departments outside of the treasury, but it tends to hamper the secretary of the treasury himself in the effort to utilize the employees of his department so as to best meet the requirements of the public service. It forbids him from preventing frauds upon the customs service, from investigating irregularities in branch mints and assay offices, and has seriously crippled him. It prevents the promotion of employees in the secret service, and this further discourages good effort. In its present form the restriction operates only to the advantage of the criminal, of the wrongdoer.

The chief argument in favor of the provision was that the congressmen did not themselves wish to be investigated by secret service men. Very little of such investigation has been done in the past, but it is true that the work of the secret service agents was partly responsible for the indictment and conviction of a senator and a congressman for and frauds in Oregon. I do not believe that it is in the public interest to protect criminals in any branch of the public service, and exactly as we have again and again during the past seven years prosecuted and convicted such criminals who were in the executive branch of the government so in my belief we should be given ample means to prosecute them if found in the legislative branch. But if this is not considered desirable a special exception could be made in the law prohibiting the use of the secret service force in investigating members of the congress. It would be far better to do this than to do what actually was done and strive to prevent or at least to hamper effective action against criminals by the executive branch of the government.

Postal Savings Banks.

I again renew my recommendation for postal savings banks, for depositing savings with the security of the government behind them. The object is to encourage thrift and economy in the wage earner and person of moderate means. In fourteen states the deposits in savings banks as reported to the comptroller of the currency amount to \$3,500,245,402, or 78.4 per cent of the entire deposits, while in the remaining thirty-two states there are only \$70,308,543, or 16 per cent, showing conclusively that there are many localities in the United States where sufficient opportunity is not given to the people to deposit their savings. The result is that money is kept in hiding and unemployed. It is believed that in the aggregate vast sums of money would be brought into circulation through the instrumentality of the postal savings banks. While there are only 1,433 savings banks reporting to the comptroller, there are more than 61,000 postoffices, 40,000 of which are money order offices. Postal savings banks are now in operation in practically all the great civilized countries with the exception of the United States.

Parcel Post.

In my last annual message I commended the postmaster general's recommendation for an extension of the parcel post on the rural routes. The establishment of a local parcel post on rural routes would be to the mutual benefit of the farmer and the country storekeeper, and it is desirable that the routes, serving more than 15,000,000 people, should be utilized to the fullest practicable extent. An amendment was proposed in the senate at the last session at the suggestion of the postmaster general providing that for the purpose of ascertaining the practicability of establishing a special local parcel post system on the rural routes throughout the United States the postmaster general be authorized and directed to experiment and report to the congress the result of such experiment by establishing a special local parcel post system on rural delivery routes in not to exceed four counties in the United States for packages of fourth class matter originating on a rural route or at the distributing postoffice for delivery by rural carriers. It would seem only proper that such an experiment should be tried in order to demonstrate the practicability of the proposition, especially as the postmaster general estimates that the revenue derived from the operation of such a system on all the rural routes would amount to many million dollars.

Education.

The share that the national government should take in the broad work of education has not received the attention and the care it rightly deserves. The immediate responsibility for the support and improvement of our educational systems and institutions rests and should always rest with the people of the several states acting through their state and local governments, but the nation has an opportunity in educational work which must not be lost and a duty which should no longer be neglected.

The national bureau of education was established more than forty years ago. Its purpose is to collect and diffuse such information "as shall aid the people of the United States in the establishment and maintenance of efficient school systems and otherwise promote the cause of education throughout the country." This purpose in no way conflicts with the educational work of the states, but may be made of great advantage to the states by giving them the fullest, most accurate and hence the most helpful information and suggestion regarding the best educational systems. The nation, through its broader field of activities, has wider opportunity for obtaining information from all the states and from foreign countries, is able to do that which not even the richest states can do and with the distinct additional advantage that the information thus obtained is used for the immediate benefit of all our people.

With the limited means hitherto provided the bureau of education has rendered efficient service, but the congress has neglected to adequately supply the bureau with means to meet the educational growth of the country. The appropriations for the general work of the bureau, outside education in Alaska, for the year 1909 are but \$87,500, an amount less than but
