## You Can Make Better Cough Syrup Than You Can Buy.

A full pint of cough syrup—enough to last a family a long time—can be made according to the recipe given below, in five minutes, at a cost of about fifty cents. It is usually sold in a deep-seated cough in 24 hours. It is also excellent for colds, whooping cough, chest pains, bronchial troubles and similar ailments.

Granulated Sugar Syrup, 13½ oz.  
Pinex, 2½ oz.

Take a pint of Granulated Sugar; add one-half cup full of water, stir, and let boil just a moment. Put the 2½ oz. of Pinex in a pint bottle and fill it up with the syrup. Shake well and take a teaspoonful every one, two or three hours. Well cooked it keeps perfectly. The taste is very pleasant.

Guaicol and other chemical elements of the pine which make the air of the pine forests so effective in the cure of consumption and other membrane diseases, are found in high proportion in Pinex, the most valuable and concentrated compound of Norway Pine Extract. For the purpose of this prescription it is immensely superior to the many weaker pine oil and pine tar preparations. All druggists have it or can get it quickly without trouble if requested.

colleges. As a result we furnish all the draftsman and chemists for the city, and have done so for years. Here the students some day will no doubt, want the entire building."

Questions American Education. Mr. Shuey spoke of the reputation of Americans as being the best educated of all nationalities and questioned it. Ninety-five out of every 100 boys and girls attending school, he said, leave at the age of fourteen and but one in every thousand finishes college. The vast majority of the boys and girls leave the schools at fourteen years of age and go to work in the factory.

"They come out of the schools absolutely knowing nothing. The schools do not teach the students how the brain may be a help to the hands. Aren't we a well trained lot of men?" he concluded in ridicule of the idea.

The vast majority of the people today do not choose their own trade but fall into it because it offers a job. "Do you not know that this is responsible for anarchy and breeds dissatisfaction," said Mr. Shuey.

"Too much success has been found in the factories of our country not from men but from the work of the boys and girls. We manufacturers have built our marvelous success on our boys and girls because of the lack of preparation for business. Our future successes will be built on the labor of skilled mechanics. Men are now beginning to specialize and prepare themselves."

Training is needed. Mr. Shuey declared in Germany, where the men have excellent training for life's work, but do not seem to have the energy and ability to get out of the steps of their fathers, the German manufacturers were importing American foremen to instill American push and energy. The German manufacturers realize that if American laborers had the German training America would control the markets of the world. Mr. Shuey stated that "Thanks to the Y. M. C. A. association this was about to be accomplished. Your public schools cannot do it because there is too much politics in them. It depends on the Y. M. C. A.'s."

He advised the young men of this city to take immediate steps toward starting a class in some course of training they desire.

Endowments for Y. M. C. A.'s. Christian men of today are pouring their money into colleges to teach one out of every 1,000 boys and girls. Mr. Shuey asked if the other 999 boys and girls were not just as deserving. He felt that the endowments should be given to the Y. M. C. A. just as freely as to the colleges. "Not that we care the less to the colleges for they are alright but that we care more to the association," said the speaker.

Said Mr. Shuey, "Bring the instruction of English into the Y. M. C. A. and cut out the grammar. The association is the source by which to reach highest development." He concluded by stating "Men of Richmond I will pray that the day will come when you will realize you did not have faith in your enterprise and when your mistake in not making a larger institution will be brought home. The opportunity is always ours if we will take it. God gives it to us."

The Paragon. "Oh, tut!" ejaculated Mr. Hollister when Blinks had got through with his hard luck into colleges to teach one out of every 1,000 boys and girls. ## THREE CHANGES ARE DEMANDED

Indiana Manufacturers and Shippers Insist on Revision of Shipping Laws.

TO ROUTE AS DESIRED.

THIS IS ONE OF MOST IMPORTANT FEATURES OF DEMAND—ASKS ROADS TO ABIDE BY TARIFFS.

Palladium Bureau. Indianapolis, Dec. 29.

Three important changes in the federal shipping laws are demanded by the Indiana Manufacturers and Shippers' association. The committee having legislative matters in charge has decided to send letters to forty-two states and to hundreds of individual shippers asking their support to the proposed changes.

To Route as Pleased. One of the most important features of the demand is that the shipper shall have the right to route his shipments as he pleases. Under the present system a shipper in Indiana, for instance, who ships goods to the Pacific coast, may send the goods to Chicago over any road he may select, but from Chicago on to the coast he has no say as to the route. The first road routes the freight out of Chicago as it sees fit. This, the shippers say, enables the strong lines to starve out the weaker railroads and places the shipper at the mercy of the big roads who may delay the shipments as much as they like, and the shipper is without redress.

Must Abide by Tariffs. Another demand is that the rules be so changed that when a road, though an agent, posts a tariff that is lower than the published tariff the road must stand by the posted tariff until it is revoked.

The third change proposed is that whereas now a road is compelled to give thirty days' notice of a change in tariff and a shipper has no right to protest until the tariff is in effect the rule should be that the shipper could protest at once without waiting the forty days.

A CHARITY PATIENT. The Price He Had to Pay For Expert Surgical Treatment.

The famous surgeon Veipeau was visited one day at his house during the consultation hour by a marquis renowned for his closeness. Veipeau informed the marquis that an operation was urgent and that the fee would amount to 4,000 francs. At this the marquis made a wry face and left. A fortnight later Dr. Veipeau, while making his rounds in the Hospital de la Charite, had his attention attracted by a face that seemed familiar to him. In answer to his inquiry it was stated that the patient was a footman of a nobleman in the Faubourg St. Germain. The surgeon found that his case resembled in every particular the somewhat unusual one for which the marquis had consulted him a fortnight previously. He refrained, however, from making any comments. Three weeks after the operation, when the patient was about to be discharged, Dr. Veipeau called him aside and exclaimed: "Monseigneur, I am extremely flattered and pleased to have been able to cure you. There is, however, a small formality with which you will have to comply before I can sign your exact—that is, you will have to sign a check for 10,000 francs in behalf of the public charity bureau of your metropolitan district." The patient's face became livid. "You can do what you like about it," continued the doctor, "but if you refuse all Paris will know tomorrow that the Marquis de D. adopted the disguise of a footman in order to secure free treatment at this hospital and to usurp the place which belongs by right to a pauper." Or course the marquis paid—Argonaut.

The Storm Nose at Sea. The picturesque name of storm nose (Gewitternase) is given in Germany to the wave of high barometric pressure which often precedes a storm or a heavy squall. The barometer rises suddenly and then falls more gradually. It is believed that this phenomenon is responsible for sudden changes in the level of the sea. Observations on the seas surrounding Denmark have led to the conclusion that the change of level thus produced sometimes amounts to no less than three feet.—Youth's Companion.

The Devil's Knell. Among the famous bells of Dewsbury, Yorkshire, England, is one known as "Black Tom of Southill," which was presented to the church in explanation of a murder. "Black Tom" is always rung on Christmas eve. Its solemn tolling as it strikes the first tap at exactly midnight is known all over Yorkshire as the "devil's knell." It being the notion that when Christ was born the devil died.—London Standard.

## INSTITUTE IS NOT PLACE OF DISPLAY, SAYS PRES. KELLY

(Continued From Page One.)

the library method. There is better method in the modern Sunday school for there some attempt is made at classification. There is better method in the modern university extension course for there the instructor's interest and the student's interest are known to be the same, and the student assumes an active attitude toward work. There is better method in the modern business college, for there the work is not wholly detached—there is some genuine and prolonged effort. A method of instruction which disregards the activity and functional phases of the consciousness of the student, which makes no attempt at classification, which largely leaves out of account specific student's needs, and which at best is operative but one week in fifty-two, is scarcely to be commended from the standpoint of instruction.

Perhaps the best solution of this problem would be to admit and insist that even with well-nigh perfect technique not much can be expected of the institute along the line of instruction—that its chief function is inspirational.

Concerted Movement Aid. But if there were a concerted movement there could be some improvement along the line of instruction. If the number of professional instructors were reduced one-half, there would be a great gain. The average sized and smaller institutes do not need more than one professional instructor. Such a change would eliminate the unwholesome competitive element and the teaching function could have some opportunity. The instructor could circulate outlines in advance, based somewhat upon local conditions and could maintain some degree of continuity in the work. The management of the institute could provide for some real sequence from year to year. For professional work the present division of teachers into classes A, B, and C, would assist in the classification. During the other periods or before the other sections home talent would be used. Most of the counties of the state have material in abundance—able and ambitious teachers, whom such recognition would encourage and whose work would bear rich fruit. The larger institute would need more professional instructors, possibly, but everywhere our programs are over-crowded. The holding of the institute after the school year opens, would assist in some instances in making the work more vital. Our institute method has become crystallized, and it will take some courage and some concerted effort to rise above it, but what other function does this section have than to work such a reform? It is certainly possible with the fine material we have to work with in Indiana, to introduce real pedagogical movements into the county institute.
