The Friday Night club held the opening meeting at the home of the president, Miss Katherine Calloway. Two duties, "The Physical Features of Africa," by Miss Grace Mills, in which she brought out many interesting facts regarding the geography of the continent, and Coleridges "Ancient Mariner" presented by Harriet Ault, formed the literary program of the evening. After routine business, the new members were welcomed into the club. As a departure from custom, the hostess served refreshments befitting the autumn time. The next meeting will be with Mrs. Mary Riche, October seven.

Luther Young met with quite a painful accident Wednesday afternoon. In leading his horse from the yard, where it had been feeding on the grass he was kicked on the right arm by the animal, and severely bruised. A gash was also cut just back of the arm and it will be some days before he has good use of the member.

TESTIFIES AFTER FOUR YEARS

Carlisle Center, N. Y., G. B. Burhans, writes: "About four years ago I wrote you that I had been entirely cured of kidney trouble by taking two bottles of Foley's Kidney Remedy, and after four years I am again pleased to state that I have never had any return of those symptoms, and I am evidently cured to stay cured." Foley's Kidney Remedy will do the same for you. A. G. Lukens & Co.

ECONOMY, IND.

Economy, Ind., Sept. 25.—Miss Lucinda Haxton has returned from Indianapolis, where she was the guest of Mr. and Mrs. Frank Doll and Miss Emilie Newlin. Miss Haxton is now engaged as book-keeper for the Economy Creamery Co.

Dr. Abernethy, the great English physician, said, "Watch your kidneys. When they are affected, life is in danger." Foley's Kidney Remedy makes healthy kidneys, corrects urinary irregularities, and tones up the whole system. A. G. Lukens & Co.

Land Explored by Dr. Cook and Commander Peary

Chicago, Ills., Nov. 15 to '30.

Forty-two states, Canada and Mexico will exhibit their varied horticultural products. Prizes aggregating \$25,000 will be awarded in a great many different classes. It is the aim of the directors of the association to make the congress instructive and entertaining to the greatest degree possible. Any desiring to enter vegetables, nuts, fruits or flowers should address the superintendent, F. L. Reed, Council Bluffs, Ia.

Some private and co-operative creameries in Illinois and other dairy states are following a plan which does much to encourage patrons to increase the size of their dairy herds. The plan consists in helping the patron to select good cows and in lending him money with which to buy other cows. One-half of the amount of his subsequent milk checks is withheld until the cows bought are paid for. This plan not only gives the farmer of small means a lift, but is a direct benefit to the creamery whose volume of business is thereby increased. Within reasonable limits this plan would seem to be most excellent.

Fifty-one millions of dollars is given as the extent of the damage to chestnut trees in portions of New York, New Jersey and Connecticut, near New York city, from a bark disease which has been found to be of fungous origin. In Forest Park, Brooklyn, alone 16,000 trees have succumbed to the pest. The department of agriculture has made a study of the disease and suggests as means of prevention that all nursery stock shipped be inspected and that all affected trees be cut down and completely burned in the shape of fuel and brush. It is thought that this disease came from Japan in shipments of nursery stock, though the fact has not been fully established.

Radical measures sometimes have to be adopted to stamp out diseases among farm animals. During the recent outbreak of the foot and mouth disease in some of the eastern states the plague was discovered in a herd of 126 cattle near Lassalle, N. Y. As soon as the government inspectors were notified that there was a trench dug 10 feet wide, 8 feet deep and 175 feet long. The herd was driven close to the edge of this pit and shot, the bodies toppling over into it or being pushed in and later covered with several feet of earth. Measures of this kind impose a heavy loss on the owner of infected herds, but only in such way can a spread of plagues be prevented.

The chief drawback with the best hired men that one can get is that they are likely to possess brains and energy enough so that just as soon as possible they like to go into business on their own hook.

While it is not an infallible sign, it is usually the case that the fewest weeds are found on the farms which are best and most profitably managed, as the strength of soil consumed in producing them cannot be utilized by growing crops.

If the young pigs are weak boned and break down on the way to market or before, it is pretty good evidence that the ration given them has not had enough bone forming material in it. This is just as necessary as the fat and flesh forming elements and may be provided by feeding the pigs wood or coal charcoal and ashes during the growing period.

The temper and disposition of the cow are largely determined by the care she receives as a heifer. This is brought to mind by a fine little Jersey heifer we know of that was bothered by some thoughtless little girls. She has sharp horns and now makes for any girl of the same size who happens to come near her. A bad habit has been formed, and the horns will have to come off.

Argentina exports more beef to the United Kingdom than does the United States, and no small part of her ability to do this lies in the 9,000,000 acres of alfalfa which at present furnishes much of the forage for her beef cattle. It takes from one to two acres of the legume to carry a mature steer through the year. The best steers raised are sold for export and fetch the grower about \$50 per head.

For two or three years past sheepmen of the southwest have sustained some loss from what is styled by the Mexicans "pingue," an ailment resulting from the eating of the rubber plant or weed. While little systematic study has been given the disease, a ranger on the Carson national forest reserve in New Mexico has tried drenches of hot water and salt with very good success, the drenches being given every hour until the animal showed improvement. Speedy relief followed the application of the remedy, which, to say the least, is cheap and harmless.

It is frequently stated by those opposed to the tuberculin test as a means of ridding dairy herds of tuberculosis that if the tuberculin is injected into the system of an animal not affected it will contract the disease as a consequence. This misconception seems to overlook the fact that the culture which is used in making the test is thoroughly and completely sterilized before it is used, making a contraction of the disease in this manner by a healthy animal an impossibility. Moreover, the extensive use of the tuberculin in testing hundreds of dairy herds gives practical proof that healthy animals do not contract the disease in the manner suggested.

The farmers' wives in a section of the small grain belt this year are on a strike in the matter of furnishing sumptuous spreads for from fifteen to twenty thrashing teams and declare that hereafter thrashing crews that come to their places will have to bring along their own mess tent and cook. It's a wonder this strike hasn't come sooner, as in good conscience the average farmer's wife has enough to do in the line of routine duties without being swamped with cooking for thrashers. A feature that has made a bad matter worse in the past is the fact that there has been a bit of rivalry between the housewives of some localities to bear

elaborate fare.

Not all real estate agents are honest enough are so given to exaggerating that it is a pretty good idea for the land seeker before going up his hard-earned money in a proposition to inspect very thoroughly the place to contemplate buying. This should include digging down several feet with a spade to ascertain exactly what the subsoil is, whether soil at all or only gravel and stone, and whether the water comes too near to the surface. This procedure may be deemed "fussy" by some, but it is likely to save a good deal of trouble "fanning" later on. If the land in question were a gift such minute examination of what lies beneath the surface would doubtless be in poor taste, but not so if it is received in exchange for good hard money.

The Wisconsin and Minnesota experiment stations in co-operation with the department of agriculture, are this season conducting a series of experiments in the northern parts of the states with a view to finding out what are the cheapest as well as the most effective methods of removing the stumps from cut over lands, many of which at present, owing to the difficulty of getting rid of the stumps, are not being readily taken up by settlers for agricultural purposes. Statistics will also be collected from farms at present engaged in clearing land, and the gist of the findings and the results of new experiments will be later embodied in a bulletin. This clearing of the land after it has been lumbered is an expensive as well as a mighty pray job, and if methods can be discovered by which it can be done any easier the efforts of these investigators will be well-worth while.

J. C. Trigg
