

NO BAND CONCERTS FOR GLEN MILLER

Atty. Bond Calls City Stingy But Mayor Says It's a Case of Have to Be.

SMOKE ORDINANCE READ

IT IS MODELED AFTER THE FT. WAYNE AND INDIANAPOLIS ORDINANCES—KICK ON STREET CARS MADE.

"Why not call Richmond 'The Bankrupt City,' instead of the 'Panic Proof City,'" suggested Attorney Will Bond at council meeting last night when the mayor made a speech opposing a resolution Attorney Bond drew up asking for an appropriation of \$200 for band concerts at Glen Miller park. Mr. Bond spoke to council and said that in case the city should appropriate \$200 the Terre Haute, Indianapolis and Eastern Traction company would appropriate at least \$150 and the pavilion manager at the park \$75. Mr. Bond stated there were many people in Richmond financially unable to take a summer vacation and must be furnished amusement at home. He believed that band concerts would make happy people and good citizens.

The mayor was incensed at the prospect of spending more money and told Attorney Bond very plainly that sidewalks and streets in Richmond, dangerous to the life and limbs of the people, needed attention and there was no money to spend on unnecessary. "I would be in favor of the concert myself," said Mayor Zimmerman, "if we had any money, but we haven't, so it's out of the question." Dr. Zimmerman said next year the taxes will be made higher so that the administration can do something.

Smoke Ordinance Heard. An ordinance to regulate the smoke nuisance in Richmond was read for the first time. It is complete, having been modeled after the ordinances of Ft. Wayne, Indianapolis and a number of other large cities. There was some kick from the councilmen. Matt Von Pein said in Indianapolis in Woodruff place there was more smoke from private residences than from factories. It was suggested the duties of smoke inspector be imposed on the fire chief or sanitary inspector.

Much complaint from residents of the West Side was reported because street cars are not furnished with full crews in some parts of the west side and Fairview. This is a violation of the state statute regarding the regulation of street cars. The motormen on some limited interurbans on the Terre Haute, Indianapolis and Eastern Traction company are failing to recognize West Third and Main streets as a regular stop. Instead west side passengers are brought into the city. Councilman Will Bartel presented a petition for the improvement of South Tenth street from Main to South A street with cement sidewalk. It was signed by one property owner. The petition was referred to the board of works.

The usual complaint about the telephone and electric light companies damaging trees was heard and President Hammond of the board of works will look into the alleged trouble. On Linden avenue several trees have been injured badly.

A GREAT MIXTURE

(American News Service)

San Antonio, Texas, July 19.—Bernard Lohmuller, anti-alimony man and matrimonial martyr, and Dave Powell, his attorney have at last succeeded in defeating one woman and all the courts in Texas. Mr. Lohmuller has wrangled out of all alimony obligations by taking French leave from the jurisdiction of the Texas courts, and Dave Powell, true to professional ethics, keeps on fighting the case sans defendant. It all happened this way: Mr. Lohmuller some time ago obtained a divorce with his wife as defendant. This being the case there was no occasion for alimony payments. But Mrs. Lohmuller or better her lawyer, discovered that there were certain technicalities that would give her a weekly allowance if the case was appealed to a higher court. This was done and the husband was ordered to pay her \$12.50 weekly pending further action. To this Mr. Lohmuller objected, so did Dave Powell and a suit seeking relief from the alimony order was promptly instituted. Defeat, however, met it in every court and the \$12.50 per week stood. Rather than pay the money Mr. Lohmuller decided to go on the rockpile and this he would be doing yet had it not been that his lawyer got him out of jail on a writ of habeas corpus to the supreme court of the state.

Mr. Lohmuller is now in regions unknown and Attorney Powell nurses a bill of some \$300. The latter, though, is not dismayed and intends to fight the case to a finish, his contract with Mr. Lohmuller calling for such a service. Dave Powell moreover claims that it is a case of professional ethics with him and that he doesn't mind the few dollars as long as his professional reputation remains unimpaired. The grantee of the alimony in the meantime is beginning to realize that, as the French say, where there is nothing the king loses his rights.

Of Interest to the Farmers

FARMS EAST AND WEST.

Comparative Cost of Lands in the Two Sections Discussed.

In a letter to the New York Times a correspondent wrote recently:

"If the Times really wants to know why it is that western land—in Iowa or Illinois—sells for \$100 to \$200 an acre while plenty of farms can be bought in New York for \$10 to \$20 an acre, let it pay attention. The secret is about to be released. And let me say at the outset that with considerable familiarity with both west and east I'd much prefer to buy eastern to western lands."

"One point in favor of the western farm is that, whereas a western farm, properly handled, will raise crops which pay a good interest on the investment without fertilizer, a great many acres of land in the \$10 and \$20 belt are merely something to put productive soil on top of. The French method of carrying the land away when one moves wouldn't go bad in connection with several cheap New York farms."

"Another thing—one can take an eighty acre farm in the middle west and plow every foot of it, while there are very few cheap farms in this section which can be cut up into fields large enough to pay for using large machinery. The result is that the eastern farmer, if he is to make use of the cheap lands, must 'putter.' Now, the right sort of putting is profitable—fruit, berry and truck raising will make moderately large fortunes for diligent and capable men—but most men don't like that sort of business. The middle westerner is a whole lot happier with a four horse gang plow and a harrow that wouldn't get between stumps in the east than he would be on a \$10 an acre New York farm. And he doesn't strike as many stones in the course of a season as the New York farmer will in a day. The American farmer hasn't lost his sense of the 'bigness' of the country yet, and until he does lose it he will prefer to work the large farm rather than the small one, even if he gets no more for his labor."

"Furthermore—and this is not to be ignored—around that high priced land in the west will be found a more intelligent, better educated body of men, taking them 'by and large,' than in a given number of eastern farmers, because the factories and the other city joys seem to lure a much larger proportion of the ambitious youth of the east. The city is so close to the farm that the transition is but a step. Of course there are many of the most intelligent farmers of the country here, but the farmer with a desire for intellectual associations—and some have it—will find less of this opportunity in the \$10 and \$20 localities than in the west. Intelligent farmers, like men in other professions, like intelligent companionship."

"I am firmly convinced that the best opportunities for agriculture lie within a few hundred miles of New York City, and my impression is that the best way to get the right sort of farmers to go to this land and stay there is to get a number of this kind of men interested in one locality, thus insuring immunity from death by intellectual starvation. It used to be imagined that a farmer couldn't starve in that way, but we know better now."

The answer was as follows: The best trellis for supporting tomatoes is the hinged trellis shown in the sketch (Fig. 2). This can be spread to accommodate the width of a row and

can be used to support the plants in one or two rows as desired. The best length is ten feet and height four feet. The trellis is quickly made of wooden strips which are nailed together as shown by sketch and hinged at the top so that it can be closed together and stored away when not in use.

LAND MEASURING DEVICE.

If Well Made It Will Be Found Very Useful on the Farm.

To measure fields readily the handy device shown herewith will be found very useful. It consists of a heavy wire or light iron rod sixteen and a half feet long, bent into a circle and the ends welded together.

Across the circle at right angles to each other are two pieces of light wood five and a half feet long. Through the center of these a hole is bored and a double handle slightly longer than half the diameter is at-
