## TO PUT ON FLESH AND INCREASE WEIGHT

Most people eat from four to six pounds of good solid fat-making food every day and still do not increase in weight one ounce, while on the other hand many of the plump, chunky folks eat very lightly and keep gaining all the time. It's all bosh to say that this is the nature of the individual. It isn't Nature's way at all.

Most thin people stay thin because their powers of assimilation are defective. They absorb just enough of the food they eat to maintain life and a semblance of health and strength.

Stuffing won't help them. A dozen meals a day won't make them gain a single "stay there" pound. All the fat-producing elements of their food just stay there in the intestines until they pass from the body as waste. What such people need is something that will prepare these fatty food elements so that their blood can absorb them and deposit them all about the body—something too, that will multiply their red blood corpuscles and increase their blood's carrying power.

For such a condition it is well to recommend eating a Sargol tablet with every meal. Sargol is not, as some believe a patented drug, but is simply a careful combination of six of the most effective and powerful assimilative and flesh building elements known to chemistry. It is absolutely harmless, yet has been wonderfully effective and a single tablet eaten with each meal often, according to reports of users, has the effect of increasing the weight of a thin man or woman from three to five pounds a week. Sargol is sold by Ciem Thistlethwaite and other good druggists everywhere on a positive guarantee of weight increase or money back.—Adv.

## LIGHTNING BOLT HITS PHONE OFFICE
