Estate Hot Storm

---the Stove with a "Little Furnace" in It

DON'T BUY A STOVE

without investigating this furnace heater—we have important news for you. So perfect is the air regulation and fire control in this heater that we guarantee it to keep fire for 50 hours on one charge of any kind of coal.

A WARM AIR HEATING SYSTEM FOR YOUR HOME

Costs No More Than Ordinary Stoves

Two heating systems in one—a warm air furnace built inside a heating stove, and the cost of operation less than in any ordinary heater.

The diagram above shows how it works. Fresh air (just as with a furnace) is drawn in through pipes on both sides of the stove, heated evenly to several hundred degrees temperature, and then discharged—not through the flue and chimney, but through the Warm Air Chamber into the room. This creates a thorough circulation of warm air which will successfully heat several rooms (six or seven rooms in some houses). Even the upstairs rooms can be heated by the aid of a simple pipe connection. (See diagram).

NOTE CAREFULLY THIS FACT: Not an ounce of extra fuel is required to heat the "Little Furnace." The warm air which it distributes is produced by heat which ordinarily is drawn up the chimney and wasted.

It embodies ALL the good features of old-fashioned

heating stoves, and its own big, exclusive features in addition. Even without the wonderful Little Furnace it would be superior to any ordinary heater.

It has a JOINTLESS ash box, which insures perfect fire control throughout the life of the heater.

It has an ash pan big enough to hold a full twenty-four hours' accumulation of ashes.

It has two Estate Patented Screw Draft Registers in the ash box door, which work with such exact precision that the heat in the Estate Hot Storm can be controlled as easily and accurately as the heat in a steam radiator.

It has a double-strength fire pot, and an anti-buckling ring which prevents the drum from buckling.

It is equipped with our patented tubular hot blast attachment, which cokes the coal, consumes the gases and soot and keeps the outer edge of the fire as intensely alive as the center.

It is as good a floor warmer as the ordinary base burner, due to the scientific construction of the ash box and skirting.
