

WASHINGTON LACKS 'CIVIC CONSCIENCE' SAYS URBAN LEDOUX

(By Associated Press) WASHINGTON, D. C., Oct. 18—A "city without a civic conscience" was the appellation bestowed upon the national capital today by Urban Ledoux, self-elected shepherd for a group of unemployed. The population of Washington he declared was composed principally of "leaders who come to take rather than give."

Having failed to find a collective conscience here, Ledoux said he would continue his efforts to locate on some one of the broad avenues an individual conscience which would recognize its duty.

His latest blow he explained was the refusal of the local authorities to renew a permit for a public meeting held by a charitable organization thru which he had hoped to obtain funds to cover food and lodging for the 50 men under his charge.

Ledoux said that as a last resort only he intended to repeat in Washington the auction of unemployed which he recently staged on Boston commons.

Red Men Attending Grand Council Meeting

Delegates of the local lodge of Red Men, left for Indianapolis, Tuesday morning, where they will attend the annual meeting of the Indiana Grand Council of Red Men, Tuesday and Wednesday.

The delegates for the Richmond lodge are as follows: Harry Bennett, Bruce Kennedy, Thomas Murphy, John Holmes and John Snyder.

SUPREME COURT ASKED FOR RULING ON "MUTT AND JEFF"

WASHINGTON, Oct. 18.—The Supreme court was asked yesterday by applications filed by the Wheeler Syndicate, Inc., and Harry C. (Bud) Fisher to determine whether copyrights granted them on "Mutt and Jeff" cartoons prohibit the Star Company, publisher of the Hearst newspapers, from using such characters, designated by those named, in situation, experiences and postures different from those shown in the cartoons copyrighted.

Radiophone News From Here and Elsewhere

A chorus of appreciation for the Palladium wireless reports of the world's series is found in the cards, letters and radiograms received at the office, since the close of the series.

Here are extracts from some of the communications:

Somerville, O.—"It is certainly a pleasure to sit in our own parlor and listen to the world's series games progresses."

Waynesfield, O.—"I have been able to keep my friends as well as myself posted on the games. We have no ticker in this burg, and by copying your reports I can furnish the news to the fans several hours ahead of the newspapers."

Muncie, Ind.—"I get your reports and music every day."

Edgerton, Ind.—"I surely appreciate the baseball scores very much."

Van Wert, O.—"I have been hearing your signals about a month. Your modulation has improved until it is very good now."

Rays Crossing, Ind.—"I get the ball reports and weather and market perfectly."

Cincinnati, O.—"My sons and I appreciate your broadcasting of the World's series baseball games and concerts during the past week."

Greenville, O.—"I have been hearing the scores of the World's series on a crystal detector set."

Goshen, O.—"The hams out here in the sticks certainly appreciate such broadcasting by radio, because otherwise we would not get the dope until we got the papers the next day."

Miami University, Oxford, Ohio—"Most of the games were heard by a roomful of boys. A scoreboard was placed outside the building also and the score marked on it by innings."

Pegg Heard at New Orleans.

Reception of signals from the station of John Pegg, of Fountain City, by a New Orleans station was reported Monday by letter from that city. The station, 5AA, is given in the call book as belonging to an amateur in the city.

He heard Pegg on detector alone, and with a two wire aerial, 30 feet from the ground and 50 feet in length. Signals came in strong even through the southern static. Pegg was using a power, a half kilowatt with the shunt clear in.

Earlham May Have Radio Club.

Fifteen Earlham students have signed an agreement to join a college radio club if one is formed. A notice asking for the formation of a club was

posted on the bulletin board by H. Conard Harvey, a freshman, and immediately attracted the interest of the wireless enthusiasts of the college.

Harvey is from the Westmont Friend's Boarding school, where a good radio station is maintained and several others have come to Earlham from the same school. The Earlhamites expect to organize next week.

Wireless Set in Cigarette Case.

Dr. H. Riley Spitzer of Eaton, is working with A. R. Bates on a pocket receiving set to be contained in a cigarette case. A loop aerial will be used, and any hydrant or similar connection may be used as a ground.

The case will contain a primary and secondary with a tuning coil and a galena detector. Tuning will be accomplished by opening or closing the case, which is of the twenty cigarette type with a double opening top.

New Radio Corporation Block.

The arrival of the new instruction book published by the Radio Corporation, which many amateurs have been awaiting, is announced by Leslie Hart.

Much of the book is devoted to explanation of C. W. principles with nine diagrams of transmitting circuits and several receiving circuits, and lists of apparatus. Some of the subjects treated are: the use of the radiotron tube, telephone transmission, construction of an amateur station, and a digest of United States radio laws.

New Sets at Winchester.

It is reported that C. W. sets are being erected at two stations in Winchester, which have been receiving Richmond stations for some time. The operators are Charles Guithel and Kenneth Clark, and they are planning to use 50 watt tubes. Guithel has a Grebe receiving set and Clark has a Mignon regenerative with audio detector.

Reception on Crystal.

Reception of the 9ZAE phone on crystal is reported by James Minor, of Lynn. Minor uses copper pyrites.

David A. Warner, located seven miles east of Greenville, O., also writes that he has been hearing the ball scores regularly with a crystal detector.

Dx Transmission.

The amateur station IT5 at Bristol, Conn., has reported hearing two local stations, Pegg, of Fountain City, and Cutler, of Richmond.

DX Club Holds Meeting.

The first regular meeting of the DX club according to the schedule adopted at the last meeting, will be held

Wednesday evening at 7:30 o'clock at the local high school. President Jos. Winder announces. The reports of two committees on by-laws and on traffic regulations will be presented, and some minor business matters will be considered. An invitation has been extended to the radio amateurs of Earlham college, and they have promised to be present.

THE FORUM

I want to put my O. H. to Mr. Haskin's Monday night's article on dope for weather prophets. However, the words "long ranged" should have preceded the words "weather prophet."

The science of meteorology, which relates particularly to the study of the weather, is giving up its secrets more and more, but has not advanced far enough to enable any one to accurately predict the weather months ahead.

The day probably is near when the kind of season approaching will be correctly forecast, but not until further investigations have been made of the upper strata of the air.

Experiments are now going on in the way of computing the weight, temperature, humidity, etc., of the upper air currents by means of balloons and kites equipped with government self-recording instruments, and from those records meteorologists are finding that the upper and lower air currents are intimately associated with one another.

If any person could correctly predict the weather months ahead for any given place, he could become very rich in a short time, since the agricultural and commercial interests would be willing to pay him liberally for such long-range information.

According to government statistics, the 36-hour forecast made off the morning edition of the daily weather map and published in the evening papers is the most accurate, averaging 88 per cent plus for the year.

First Trial Fox Hunt Runs Held Monday

(By Associated Press)

PARKERSBURG, W. Va., Oct. 18.—

The first trial run of the Ohio Valley Fox Hunters' association was held near here yesterday with a field of 125 hounds entered from Ohio, Kentucky and West Virginia. A red fox was raised, but after leading the hounds in a five-mile chase managed to escape with his brush.

A feature of the meeting will be the derby which is to be run tomorrow for hounds whelped since January, 1920. It was expected that there would be trial runs today and tonight.

FARMER MUST

(Continued from Page One.)

buying public was still further reduced, demand declined still more, the cost of every retailing operation rose, and the retailer, with his high prices, was less than ever in a position to reduce them.

It is a statement which is easy to understand, but hard to remedy. If a bushel of potatoes would buy a pair of shoes in 1913, but it takes two bushels of potatoes to buy a pair of shoes now, then the potato grower can only buy half as many shoes now as in 1913. One result is that employees of shoe factories will be thrown out of jobs. Then they can't buy any shoes either.

Really, the farmer, if at all intelligent, is in an enviable position. He at least can eat. It is only the farmer who raises nothing but one money crop who now suffers—the man who raises only tobacco, or cotton—for example. The farmer who produces hogs and chickens, and keeps dairy cattle and raises potatoes and beans

is in a position to weather the storm.

According to government statistics, the 36-hour forecast made off the morning edition of the daily weather map and published in the evening papers is the most accurate, averaging 88 per cent plus for the year.

and other vegetables, need go to market for very little of his food. He is vastly better off than that ex-shoe-factory employee, for example.

Business will never pick up until the farmer once more is able to buy a pair of shoes with a bushel of potatoes. That can be accomplished either by

Everyday Ad-Ventures

That puts The Joy Back Into Life!

When the October wedding days come around and you see a number of your friends getting married—and all the time you have The Girl picked out, but you can't pick the date because you're not making enough money to support a family of two—

And you can't see any prospects of the job you have ever developing into a real asset for a family man, but you've been looking around and haven't been able to find another one that's even as good—

And everybody tells you that "this is a very bad time to change jobs" and to hold on to the one you have, and to make it all the harder, you know you would be worth more money as some employee, if only you had a chance.

And then, one evening, The Girl asks you why you don't try an ad in the Situation Wanted column of the Palladium—

And three days later you cash in on her suggestion and your little ad investment with a bigger job at a bigger salary—and you can hear the wedding bells chiming just around the corner—

ARCOLA WEEK

An Invitation to
the Ladies especially

Many Heating Engineers are keeping their stores open evenings and invite you to come in and meet ARCOLA

THIS WEEK is ARCOLA Week and the Heating Engineers are keeping open house. Many will keep their stores open evenings for you.

They invite you to come in and meet ARCOLA, the wonderful new hot-water heating outfit which warms a whole house with its single fire, taking the place of several stoves and paying for itself in the fuel it saves.

If you don't know where your Heating Engineer's store is, pick up the classified telephone directory and look under "Heating Contractors" or "Stonemasons" or "Plumbers." Pick out the name and address nearest your home.

And decide now to accept this invitation; it may mean a saving of \$25 on this winter's fuel bill: or even more than that!

For ARCOLA—built by the same company whose larger heating plants are installed in mansions, cathedrals and even the White House itself—is guaranteed to do these five things:

1—Connected with American Radiators, it fills the whole house with healthful hot-water warmth.

2—It takes the place of several stuffy stoves, and pays for itself in the fuel it saves. In that sense it is really a gift.

3—It can be connected to the kitchen tank, too, giving an abundance of hot water for washing and bathing.

4—It can be installed immediately without the slightest disturbance to the family.

5—It adds from three to five times its cost to the selling value of your house—just as IDEAL Boilers and larger AMERICAN Radiator systems add far more than their cost to the value of larger buildings.

ARCOLA is unlike any heating plant you have ever seen. It is an entirely new invention developed after

years of experiment in the largest thermal research laboratories in the United States.

Don't try to imagine what it is until you have seen it. But for the sake of your comfort—and your children's comfort and health especially—accept your Heating Engineer's invitation.

One-third of your fuel bill is worth saving. See ARCOLA any day or evening this week.

This red and yellow card at the right is the sign of a Heating or Sanitary Engineer (you used to call him Steamfitter or Plumber) who can show you ARCOLA. Look for it in his window.

It will pay you to consult him twice a year as you do your Doctor or Dentist. To have him examine and report on your heating and plumbing costs little. It may save you a very great deal.

ARCOLA Burns Any Fuel

Come in this week ARCOLA WEEK—and let us demonstrate this wonderful new heating invention which pays for itself in the fuel it saves.

An ARCOLA outfit connected with American Radiators can be installed in your home, store, shop, office or garage at surprisingly low cost.

Let us give you an estimate covering your requirements. No obligation to you whatever.
