

LITERALLY KEEPING PIG IN PARLOR, SAYS INSTITUTE DIRECTOR

CHICAGO, June 1.—"They're keeping the pig in the parlor again," is the way Guy H. Hall, director of the National Institute of Progressive Farming, symbolizes a national survey of the 1922 spring crop of pigs just completed by the institute.

The survey was compiled from government reports, the investigations of W. J. Carmichael of the National Swine association, reports from the leading terminal cattle markets, from ten pure-bred swine record associations, and the institute's own survey of 14,000 local dealers in all parts of the corn and hog belt. Data of agricultural colleges, state departments of agriculture, and from James E. Poole, secretary Live Stock Exchange, also supplied information.

"It is a pretty thorough-going survey," said Mrs. Hall today, "and it indicates not only the immense importance of the pig to the farmer this year, but as a big element in restoring the prosperity of the whole country. Pigs are bringing real money, and when I say that the pig is in the parlor again it is not all metaphor. We know of many cases where weakly piglets have been brought into the house for warmth and nursing. That's because he is regarded by most farmers as the factor which is going to rescue him from the slough of post-war deflation."

"Pure-bred record associations show the biggest business in history, indicating better and more profitable swine in the future. The government, farm bureaus, colleges, all are educating the farmer not only to the profit of pure-breds, but to the economy of power farming and other progressive methods."

Mortality High
Mr. Hall states that the survey shows only a normal or normal pig crop of pigs for the reason that although breeding increased, mortality was higher owing to the inability of the farmers in many cases to balance the ration of cheap corn, and to the foods and the cold and backward spring.

Probably 25 per cent more sows were bred this season than usual, and hence the mortality was viewed with unusual regret when every pure bred baby porker was viewed as a potential fifty-dollar bill. Business men are watching the swine market with the greatest interest because the pig is viewed as the first trail back to farm prosperity, according to the survey. Even the ordinary pig "that eats everything you can't eat and then you can eat him" look like a twenty-dollar coin piece to the grower.

In 1921, the survey states, more pork was eaten than beef, veal, mutton, goat and horse meat combined. About 14,000,000 pounds of land a week are going abroad. The constitutions of this year's pigs are weaker than usual, but this probably will be offset by increased care and precautions against diseases. Increased entries even this year for the National Swine Show at Peoria, Ill., next fall is accepted as indicating the increased importance of the porker in the hard road back to normalcy.

Do You Live In A Bug House?

Even the most careful housekeeper is likely at times to have trouble with some of the numerous household pests such as ants, bedbugs, cockroaches, fleas, moths, rats and mice.

In spite of all precautions these unwelcome visitors frequently get into a house and immediately action must be taken toward their extermination. Poisoning, trapping, fumigating and the use of repellents are some of the methods employed. But great care must be taken because some of the most effective ways of destroying these troublesome creatures are dangerous to human beings.

The popular Government booklet "Housecleaning Made Easier," in addition to telling the housewife how to keep her premises clean and orderly all the year round, contains full instructions for eliminating all household pests.

This is a free Government publication and our Washington Information Bureau will secure a copy for any reader who fills out and mails the coupon below, enclosing two cents in stamps for return postage. Be sure your name and address are written plainly.

(Do not send the coupon to The Palladium. Mail it direct to Washington, D. C.)

Fourth Quarterly Session Of Methodists June 3-4

FOUNTAIN CITY, Ind. June 1.—The fourth quarterly meeting will be held at the Wesleyan Methodist church here Saturday and Sunday, June 3 and 4. The Rev. S. R. Eddie, of Marion, will be the principal speaker. First services will be held Saturday night. Other services will be held at 10:30 a. m. and 7:30 p. m. Sunday.

Lace was known in Venice at an early period. It was not unknown to the Greeks and Romans. To protect the native article, its importation in

ITALIANS ARE TRIED IN RANDOLPH COURT

WINCHESTER, Ind., June 1.—The case of the State of Indiana against Attilio Coro and Caesar Moro, is being tried in the Randolph circuit court. The two men are charged with operating a still. They are both Italians and cannot speak English. Their testimony is taken through an interpreter from Celina, Ohio. They were arrested by Sheriff Fisher April 5, at their home, five miles north of the city. The still, together with a quantity of prunes and mash, were found buried in the yard.

Hold Union Services
Sunday evening was observed as "law and order" evening, when all the churches of the city joined in a union service at the First M. E. church, under the direction of the Winchester Kiwanis club. Judge A. L. Bales spoke on "Help to Make the Boys."

Foreclosure Filled
Foreclosure of a merchant's lien has been filed in the circuit court by the Produce Supply company against Vernon E. Good, William E. Walker, Minnie Z. Walker, W. E. Walker and company, Joseph Gard and Pearl Keever.

Petition for Drainage
Petition for drainage has been filed by Eva Midland and Oma Hanshey, ex parte.

Complaint on Account
Complaint on account has been filed with the county clerk, by Ira Past against Miles Arbogast.

Watson Visits Mother
Senator James E. Watson spent the week end here visiting his mother, Mrs. Margaret Watson, and other relatives and friends.

BUSINESS WOMEN'S LUNCHEON TUESDAY

Decision to have the noon luncheons conducted by the Business Women's Conservation committee, and the evening meeting of the Virginia Asher Business Woman's Council on Tuesday hereafter was made at meetings of the organizations Wednesday at the Grace M. E. church.

The Conservation committee, which met in the meeting following the noon meeting of girls, voted to have the meeting next week at the Grace M. E. church. Mrs. Backus will give the Bible talk.

The committee also decided to hold sessions throughout the month of June. The Virginia Asher council met at the Grace M. E. church at 6 o'clock, in its first regular session. Following the lead of the Conservation committee the girls voted to have their first Bible study class on next Tuesday evening at the Grace M. E. church. Mrs. Backus also will address this group.

Davis, Waltermann Lead City Planning Discussion

City Engineer Dell B. Davis and Councilman Joseph Waltermann led the discussion of the city planning ordinance at a meeting held in St. Andrew's school auditorium, Wednesday evening. No vote on the sentiment of the audience was taken. A number of visitors from the Fourth ward attended.

Sixth Ward to Discuss Proposed City Planning

A meeting to discuss the proposed city planning commission has been called by Councilman L. E. Fahlsing, of the Sixth ward. The discussion will be held Friday evening in the Valle school at 7:30 o'clock. All persons interested in city planning are urged to attend.

William Kelley, city attorney, and Dell Davis, city engineer, will be present to discuss the law. A large attendance is desired in order that a full, free expression of opinion may be obtained.

Mr. Fahlsing introduced a motion to have the city planning ordinance resubmitted to council after its defeat early in the year.

The New York national guard has 12 "aces," each of whom is credited with five or more triumphs in all combats during the world war.

HERE IS "NATURE'S GRATEST FOOD"

What Scientists Say About the Chief Elements of Father John's Medicine

If you find yourself getting listless, lazy and inactive, do not attribute your condition to the so-called "spring fever." You are really in a run-down condition and are suffering from a lack of proper nourishment. You need a tonic to build up new strength and health and to increase your power of resistance.

You should take just such a tonic as Father John's Medicine. The chief element of Father John's Medicine is commonly called by physicians "nature's greatest food." This element is divided up into the finest of particles which are readily taken up by even the weakest of digestive systems. Father John's Medicine nourishes the body tissue and enriches the blood, so that the people taking it are soon restored to normal health. Start taking Father John's Medicine today.

June Hatched Chicks Make Good Chickens

By Judge D. E. Hale.
In the past many people had the idea that in order to mature pullets so as to get winter eggs or to have a cockerel or pullet that was ready to exhibit at the early poultry shows, that they must hatch them early.

With this idea in mind a majority of the poultry raisers thought that the earlier they got them out, the better. This idea has been exploded by the fact that June hatched chicks properly cared for and fed will mature so as to be laying in December or even sooner, and the exhibition birds will be ready for the December shows. Most of our best winners are June and even July chicks this year. In that case, you have an equal chance with the others to be producing winter layers and show birds.

It is much easier to care for the later hatched chicks than those hatched earlier. As a rule, the early hatched chicks have to be kept confined more on account of the weather. Close confinement on hard or cement floors, lack of sufficient sunshine and fresh air all have a tendency to cause such troubles as leg weakness, loss of vitality, etc.

The late hatched chicks can be let out on the ground each day, and they should. They should have sunshine if they desire it and shade if they need it. Their water fountains should be kept clean so that no scum can accumulate on the inside and they should be kept filled with fresh water.

Their feed should consist of a good chick starter or chick mash. They should not be fed at all for the first 48 hours. This gives them a chance to digest and assimilate the yolk of the egg that has been taken into the chick's body during the last 24 hours of incubation. Their first feed should consist of some easily digested feed like a good chick starter or chick mash. This should be mixed with or contain a little fine grit and charcoal. They should not be fed much at a time, but should be given it about four or five times a day for the first four days. After that they can have the mash fed in front of them in a hopper and they should be given a good chick scratch feed, and this should be buried in a loose litter so they will have to dig and scratch for it.

Once a day they should be given a feed of some good, juicy green feed, and this will be better for them if it is run through a meat grinder, the juices saved, and the whole mixed with a good chick mash so that it will be of a crumbly consistency.

The brood coops should be kept thoroughly cleaned and disinfected so as to keep down the lice and mites. You cannot raise mites and chicks in the same coop for the mites will sap the vitality of the chick faster than you can feed it to them.

Good care, shade, sunshine, cleanliness and fresh water will mature a June chick so that it will make a good winter layer or show bird. Try it out—Hatch and raise some June chicks this year. They will make you money next winter.

Beware of Johnson Grass, Is Warning to Farmers

Information received by the Purdue university agricultural experiment station indicates that a seed company in one of the southern states is interested in selling Johnson grass seed on the Indiana market.

Although Johnson grass makes good hay, it is at the same time an extremely noxious weed, that is almost impossible to eradicate. Johnson grass is already established in Indiana as a serious weed. It is known to be troublesome as far north as Vigo county, particularly in the vicinity of Terre Haute, where the farmers contend that it is one of the worst weeds in the county. For this reason farmers who may be contemplating sowing Johnson grass as a hay crop are warned that the plant is a dangerous weed and a menace to profitable agriculture.

Johnson grass was originally introduced from Turkey into South Carolina about 1833 for use as a forage crop. The plant was hard to control and spread rapidly until it is now regarded as one of the

worst (if not the worst) weeds in the southern states and in California.

During recent years it has ranged northward and it is now established as a weed in Iowa and Indiana. "It would be foolishly on the part of Indiana farmers to intentionally introduce so dangerous a weed upon their farms. Where it already occurs in abundance, Johnson grass is utilized for hay, as in the blackland belt of Mississippi and Texas, but the plant should never be grown intentionally," say botanists at Purdue.

There are a number of better hay crops that can be used instead of Johnson grass. Sudan grass, for instance, is practically an annual form of Johnson grass that is never troublesome as a weed. Experimenters have demonstrated that Sudan grass can be secured by addressing the Purdue agricultural experiment station, Lafayette, Ind.

If Johnson grass has already been planted, the land should be plowed without delay and planted to corn, being careful not to allow the Johnson grass to develop in the corn rows or along fence rows.

With such excellent plants as soybeans, Sudan grass, millet and sorghum at our disposal, there is no reason for introducing so dangerous a plant as Johnson grass and any attempt in this direction should be discouraged. Indiana is already plentifully supplied with noxious weeds.

Raise 'em The FUL-O-PEP Way

The Ful-O-Pep Way of Feeding chicks has changed the old expensive "grain feeding way" and has proven to poultry raisers that the old method of grain feeding is all wrong. The Ful-O-Pep Way of feeding

Gives You 1 Pound of Gain at Cost of 2 Pounds of Feed

instead of only 1 pound of gain to each 4 pounds of feed, which is the basis of figuring cost of production arrived at by experiment stations covering several years experiments with grain feeding. Why continue to feed this old expensive way when The Ful-O-Pep Way will give you the same gains with only half the feed?

FUL-O-PEP GROWING MASH

Costs Less Per Pound of Gain Made Than Any Other Feed

The Ful-O-Pep Way consists of feeding Ful-O-Pep Growing Mash from the very start—continuously keeping it before your birds all the time. Ful-O-Pep Growing Mash, because of the high feeding value of its oatmeal, fish and bone contents goes twice as far as grain feeds—every ounce is digested by chicks' delicate digestive organs—there is no waste and when compared with results cost only half as much in pounds of feed consumed for gains in pounds of meat produced. Furthermore, your losses from bowel and digestive troubles that arise from feeding hard indigestible grains, will be very much less and your flock will be of even growth and development. Give The Ful-O-Pep Way a trial this season—it will reduce your feed costs and materially increase your profits.
