## HOOSIERLAND HAS FINE APPLE CROP

"It's apple harvest time once again in the old Hoosier State and as fine a crop of fruit as ever grew is moving to market," Monroe McCown, Purdue University extension fruit specialist, reported this week. Consumers are being offered a wide choice in apple varieties for use in making pies and in preparing other tasty foods.

It was estimated that Indiana apple producers will spend nearly a third of a million dollars in harvesting, packing, and delivering the 1939 crop to the central markets where it will be made available to consumers.

Federal inspectors examining scores of Hoosier apple orchards this summer have found the fruit so free of blemishes and so highly colored that more than 90 per cent of it has met the rigid requirements of the U. S. No. 1 grade.

McCown released the following information for the benefit of housewives on apple varieties and their best uses:

Pies: McIntosh, Spy, Winesap, Turley, and Grimes;

Baked Apples: Rome, Turley, Stayman, Delicious, and Jonathan;

Apple Sauce: Grimes; Stayman, Golden Delicious, Spy, Turley, Winesap, and Rome;

Red apple: select medium sized fruits of Delicious, Jonathan, Rome, Spy, Stayman, and Winesap.

Dr. J. H. Nilson, health officer of Mankato, Minn., at a recent meeting of the city council protested that his salary was too high and volunteered to accept a reduction.

Mr. and Mrs. Alva Hamman spent Saturday night in the Martin McClintic home.

Mrs. Harry Wingard called on her mother, Mrs. Ira Crow, Sunday afternoon.

Do you know how many feet you travel per second at sixty miles an hour? Many accidents are caused when the motorist fails to realize the terrific speed he is traveling at sixty miles an hour and how long it will take him to stop the car.

An English judge discovered a very simple formula by which this could be figured. The answer is correct within 2 per cent. The formula is to take the speed shown on the speedometer and add one-half the speed to arrive at the number of feet traveled per second.

Try it.

I am sure this will convince you that your brakes must be in good physical condition, and above all, that your judgment as to when speed should be used must be of the very best. Can you stop your car within the range of vision at night traveling sixty miles an hour and covering approximately ninety feet per second?

It's Smart to Drive Carefully.
