CAPITOL HOUSE-CLEANING.

THE REGULAR AUTUMN RENOVATION SOON TO BEGIN.

How This Immense Undertaking is Accomplished—Dust, the Great Invader—The Daily Routine—Cost of Maintenance—Custodian.

INDIANA'S Capitol will receive its autumn cleaning as soon as the visitors, who tramp through its halls while here at the State Fair, have departed. Housecleaning at the Capitol is a strong-meaning term. Few housewives, who dread for two or three weeks to begin the dusting and renovating of their dwellings, would undertake to place a building like the State House in a condition to rival a drawing-room in cleanliness. Housecleaning at the State House comes twice a year, in the spring and in the fall, and lasts from eighteen to twenty-four days. During these periods the cleaning process is applied to the interior of the building, from the windows to be seen under the gilt ball of the dome to the mouth of the sewer in the farthest corner of the basement. The dome, skylights, garget, 128 rooms, the corridors of the three floors and the halls of the basement all have a thorough going over. To clean the dome means that thirteen and a quarter acres of floors and ceilings, not to include the walls, are to be come over with dust rags and mops. Chandeliers and side lights to the number of 494, containing 3,800 gas burners, must be relieved of their dust and brightened until they shine. Square and round windows to the number of 185 have to be washed with soap and water. Miles of oak and mahogany finishings are wiped with a dust rag. Railings and stairs are subjected to the vigorous cleaning. Marble pillars in seeming endless number are washed and polished until they glisten from top to bottom. The tile and marble floors are ground and the woodwork is cleaned with clear water and mops. All of this work is accomplished so that it does not interfere with the daily routine of the State government. Before the housecleaning can have attention each day, sixty-five rooms, occupied by State officers, must be cleaned and made ready for the day before 6:30, when the officials begin to arrive. The corridors of the first and second floors must also be sprinkled and dried. At ordinary times this work is accomplished by fifteen janitors. When housecleaning is going on the number is increased to eighteen, and after a session of the Legislature, when the Capitol is dirty from one end to the other, twenty-three men go over the house, with water, mops and rags.

DUST, THE GREAT INVADER.

The greatest enemy a house has, Timothy Griffin, the custodian, says, is dust. If this invader could be kept out of the State House, the janitors might have six hours as a working day, instead of eight at present. To remove the dust, little sweeping is done. Only a few brooms are to be seen in the State House, as they are used only to sweep carpets. Feather-dusters are about as rare as the brooms. An effort is made to keep the garget of the Capitol as clean as any other part of the building. Through the skylights the winds carry considerable dust which, if not removed, would be a nuisance. The custodian tries to keep out of the third floor as much as possible. The prevention of the dust and dirt of one floor penetrating to the one below is the first principle of the housecleaning. Instead of stirring up the dust with a duster, everything is wiped with a rag, so that the way it is prevented from filling the air and settling in other places. To clean the floors the scrubbing process is used. After that the State exercises little economy in its use of clear water. The floor is well sprinkled. Then a string of janitors, eight or ten in number, dragging wide mops, made of strips of carpet, march single file CUSTODIAN GRIFFIN, over the wet surface and leave the floor to dry. By this method the dust is gathered up. Every inch of the walls and ceiling is wiped with cloths, and this also prevents circulation of the dust. While housecleaning the carpets are carried out on the lawn and beaten. When swept on the floor a quantity of paper, soaked in water and torn into bits, is strewn over the carpet and swept up with a broom.

THE DAILY CLEANING.

On ordinary days the program followed by the brigade of janitors has been sufficient to give the Capitol the reputation of being one of the best kept public buildings in the Union. At 6 a. m. the janitors begin their day's work in their apartment, which is subjected to a rigid cleaning by mop and rag. The janitors have their individual work, and so long a time in which to accomplish it. Before 8 o'clock an officer arrives in time to find his office in the hands of the janitors. At 8:30 the first and second floor corridors are sprinkled and dried from one end to the other. At 9 o'clock the janitors have an hour for lunch. Then they scatter all over the building and perform the endless tasks which constantly arise. At 4 p. m. their labor ends for the day. The care of the Capitol moves with the regularity of machinery. While it is in motion nearly all the time, what is termed the housecleaning season causes more attention to be given the dirt.

THE STATE'S HOUSEKEEPER.

Indiana has only had one official housekeeper, who has acted in that capacity since the creation of the office. Before the commission was appointed Timothy Griffin superintendent. Over four years ago he was appointed custodian by the Legislature. Under his supervision is a force of workers that, from the assistant custodian down to the guides, move in daily routine with the precision of clock work, and these men keep the home of the Indiana government in condition for critical inspection at any time. The deputy State officers say that the custodian is so accomplished in caring for the Capitol that he can stand a pipe in the basement and help hand a flag up on the dome at the same time. He spends most of his time prowling around in dark corners with a lantern in his hand. If a storm comes up in the night he arouses from his bed at his home in Union street and before the first clap of thunder has died away the custodian is on the way to "his" State House.

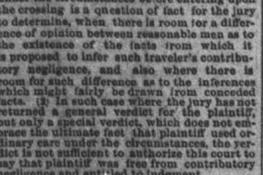

THE YEAR'S SEALING PRODUCT.

Commander Ludlow, of the Mohican, which has been patrolling Behring Sea all summer, estimates the product of pelagic sealing this year at 60,000 skins. The total value of the year's sealing product, including the catch of the leucæ of the seal islands, he estimates at about \$1,000,000.

ABOUT THE HARVEST MOON

THE TIME FOR ITS RISING IS NOW NEAR AT HAND.

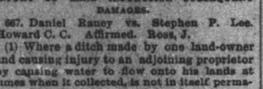

Its Full Face Shows Itself Several Times at About Sunset This Month—Why It is Called "The Harvest Moon."

It is now time to be on watch for the "harvest moon." Its evening rising are drawing near. The "harvest moon" is the full moon which rises several days in succession near the time of sunset; the time for its rising grows only a few minutes later each night, and its appearance just after the sinking of the day's illuminator is convenient for continuing out-door work beyond the usual hours. For this reason it is called the "harvest moon," shedding its timely light at a season when extra farm work is necessary.

The moon comes rather late for this year's harvest, but the moon will be the "harvest moon" just the same. The "harvest moon" comes at or near the autumnal equinox. Its path in rising cuts the eastern horizon with a smaller angle than usual, descends below the horizon only a small distance, and this accounts for the rising for several successive days only a few minutes later daily.

The accompanying diagram shows the positions of the moon with respect to the eastern horizon at the hour of sunset on five consecutive evenings, from the 23d to the 27th inclusive. The celestial equator (the equinoctial) and the ecliptic (the path of the moon) are shown as they would be seen, if these imaginary lines were visible, by a person looking east in the latitude of Indianapolis. The arrow shows the direction of the moon's apparent diurnal movement also indicated by a series of dotted lines, its length being the distance moved by the moon in one hour. The moon's actual movement in its orbit is from right to left, as is indicated by the figures which mark its positions on consecutive days.

Let HN represent the eastern horizon; Z the direction of the zenith, EQ the equator making an angle, EON, with the horizon at Indianapolis of nearly 50°, SM the position of the ecliptic or sun's path on the east, September 21, and PL the ecliptic, March 21. Then on September 21, the monthly path of the full moon when rising will be nearly SM, and on March 21 nearly PL. The angle SON of the moon's path with the horizon will be at Indianapolis, nearly 60° minus 23° and 27°, while PON, the same angle March 21, would be about 47° greater. The moon may be supposed to rise on September 21 at O, at 6 o'clock. By 6 o'clock the next evening it will have traveled a distance OM, of about 12°, or 20° divided by the synodical period of the moon. OM is the moon's gain on the sun in one solar day. Then, in order to rise, the point R on the horizon must describe MR parallel to the equator EQ, so that the arc MR, converted into solar time will give the time required for the moon to rise from M, or the time after 6 p. m., when the moon will rise September 22.

Had it been March 1, then the time after 6 for the moon to rise the next evening would have been the arc LX converted into solar time. Thus, about September 21, the moon will rise but a few minutes later for several successive evenings, and is called harvest moon, since its light is favorable to late work at the supposed harvest time.

To compute this daily interval between times of rising, we may roughly call O M R a plane triangle, in which O M is 12°, the angle M O R equals 90°, minus the sun of the latitude and the obliquity of the ecliptic and angle M R O equals supplement of 90°, minus the latitude. If the latitude plus obliquity equals 90°, then the moon will, as in parts of Norway, rise at the same time for several successive evenings.

And if this sum be greater than 90, then the moon will rise earlier each successive evening. This supposes the earth spherical. On account of the ellipticity of the earth's meridian, the latitude at which the full moon of the autumnal equinox will rise at the same hour for successive evenings will be slightly less than 66-33 as above. Chambers' Encyclopedia gives it as 64° and 27". These results are modified by the position of the moon with reference to its nodes. If, at its ascending node, then the condition is favorable for the shortest intervals between successive risings of the harvest moon.

Back numbers of the Encyclopædia series (nine issues for 15 cents) will be sent, postage prepaid, to any address, on receipt of 15 cents in silver or postage stamps.

ABOUT THE HARVEST MOON

THE TIME FOR ITS RISING IS NOW NEAR AT HAND.

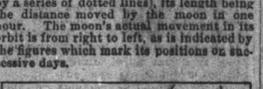

Its Full Face Shows Itself Several Times at About Sunset This Month—Why It is Called "The Harvest Moon."

It is now time to be on watch for the "harvest moon." Its evening rising are drawing near. The "harvest moon" is the full moon which rises several days in succession near the time of sunset; the time for its rising grows only a few minutes later each night, and its appearance just after the sinking of the day's illuminator is convenient for continuing out-door work beyond the usual hours. For this reason it is called the "harvest moon," shedding its timely light at a season when extra farm work is necessary.

The moon comes rather late for this year's harvest, but the moon will be the "harvest moon" just the same. The "harvest moon" comes at or near the autumnal equinox. Its path in rising cuts the eastern horizon with a smaller angle than usual, descends below the horizon only a small distance, and this accounts for the rising for several successive days only a few minutes later daily.

The accompanying diagram shows the positions of the moon with respect to the eastern horizon at the hour of sunset on five consecutive evenings, from the 23d to the 27th inclusive. The celestial equator (the equinoctial) and the ecliptic (the path of the moon) are shown as they would be seen, if these imaginary lines were visible, by a person looking east in the latitude of Indianapolis. The arrow shows the direction of the moon's apparent diurnal movement also indicated by a series of dotted lines, its length being the distance moved by the moon in one hour. The moon's actual movement in its orbit is from right to left, as is indicated by the figures which mark its positions on consecutive days.

Let HN represent the eastern horizon; Z the direction of the zenith, EQ the equator making an angle, EON, with the horizon at Indianapolis of nearly 50°, SM the position of the ecliptic or sun's path on the east, September 21, and PL the ecliptic, March 21. Then on September 21, the monthly path of the full moon when rising will be nearly SM, and on March 21 nearly PL. The angle SON of the moon's path with the horizon will be at Indianapolis, nearly 60° minus 23° and 27°, while PON, the same angle March 21, would be about 47° greater. The moon may be supposed to rise on September 21 at O, at 6 o'clock. By 6 o'clock the next evening it will have traveled a distance OM, of about 12°, or 20° divided by the synodical period of the moon. OM is the moon's gain on the sun in one solar day. Then, in order to rise, the point R on the horizon must describe MR parallel to the equator EQ, so that the arc MR, converted into solar time will give the time required for the moon to rise from M, or the time after 6 p. m., when the moon will rise September 22.

Had it been March 1, then the time after 6 for the moon to rise the next evening would have been the arc LX converted into solar time. Thus, about September 21, the moon will rise but a few minutes later for several successive evenings, and is called harvest moon, since its light is favorable to late work at the supposed harvest time.

To compute this daily interval between times of rising, we may roughly call O M R a plane triangle, in which O M is 12°, the angle M O R equals 90°, minus the sun of the latitude and the obliquity of the ecliptic and angle M R O equals supplement of 90°, minus the latitude. If the latitude plus obliquity equals 90°, then the moon will, as in parts of Norway, rise at the same time for several successive evenings.

SOME MOMENTOUS TRIFLES.

LITTLE THINGS THAT HAVE MADE A BEARING ON HISTORY.

The Legend on a Government Silver Certificate—How the Declaration of Independence Was Hastened—Shaving a King.

OR months the country has been sweating over the silver question and its various ramifications, but probably not one man in a dozen who has given attention to the subject is aware that the insertion of the two little words "in gold" on the face of a Treasury note...

KARLOVITZ TRIFLES.

What some one calls the sarcasm of accident was never more strikingly realized than by the events of Napoleon's career. So far as a man could determine the course of a soldier's life, he was controlled by chance.

AMERICA AND GREECE.

According to a story told in Spanish annals, and in Spain devoutly believed, the discovery of America depended on a game of chess.

THE DECLARATION.

This story is akin to one told in the memoirs of Thomas Jefferson of the manner in which the signing of the Declaration of Independence was accomplished.

grain of wheat up a steep ascent, the number of failures in each case always equalling the number of battles lost by the hero and the final success resulting from the victory he won after again taking the field.

A SHAVEN KING.

It is fortunate for mankind that no more serious consequences usually result from shaving than being cut by the barber. In one case, at least, the people of two kingdoms suffered for generations the miseries of being a king had his hair cut and his beard shorn.

The Condition of the Banks.

Reported merely as an exhibit of the actual condition of the New York banks, the statement issued on Saturday is full of encouraging features. The increase of \$8,485,000 in deposits is an extremely good symptom.

VOORHEES AS A LEADER.

Give them the bayonet, Mr. Voorhees. Grass balls will never dislodge them.—[Louisville Times (Dem.).]

The Importance of the Hair.

There is one melancholy thought, irrepressibly stealing over the beholder, of all this magnificence—that it will be among the first things to be lost in a coming calamity.

The Noisiest Animals.

What animal can make the most noise? The cheepant, during the breeding season, in the forests of India and Ceylon, is continuous and terrific, and can be heard for miles.

THE REVERENDS.

Over 60,000 baskets of peaches lay in warehouses and on docks on the Michigan side of the Detroit river yesterday and spoiled. They were bound to this city, and were to have been brought over by the dozen steamers running across the lake.

DIACLECT OF NEW YORKERS.

Feeling that the inhabitants of that City Toward the Letter "R." In every Episcopal church in the city one hears the responses to the commandments sung so: "Laud have money upon us and incline our hats to keep this law."

HARD TO PUT IN TYPE.

The main difficulty in putting the dialect into type is inherent in the language. In the printer's case the letter "r" is the biggest and roughest of all, for that letter is used the oftentimes; but by good rights there ought to be a character for the indeterminate vowel sound, whose duty is now shared out on the other vowel letters.

THE "H" PUT TO A USE.

"Don't cry, little R," the people say. "We have let you out of where you belong, but we'll put you where you don't belong, and won't that be nice?"

IT'S A FACT.

that to see our line of Fall goods is to admire them, and to see the prices on them, is to buy them. All our goods are tailor-made, and our patterns and styles are the very latest productions of the tailor art.

NOTE THE PRICES.

625 Merchant Tailor Suit or Overcoat we sell for \$12.00. 30 Merchant Tailor Suit or Overcoat we sell for 15.00.

VOORHEES AS A LEADER.

Give them the bayonet, Mr. Voorhees. Grass balls will never dislodge them.—[Louisville Times (Dem.).]

ALL KINDS FURNITURE

FURNITURE. The demand for loans is on the increase. Many of the associations are prepared to loan money now. Money is in demand, but withdrawals are not exceptionally heavy. Many people who gave notice of withdrawal have countermanded their notice. The National has no money to loan. It has plenty of first-class loans outstanding. The Center Building and Loan Association will issue a new series of stock October 2. While the mills are idle the associations of Terre Haute propose to suspend fines against delinquent shareholders. A building association, exclusively for colored people, is to be started in Maryland. The officers are already elected. The ruling of the State Board of Equalization, that paid-up shares in associations are not exempted from taxation, will be tested. The Atlas will have money to loan in a few days. The reports of this association show it to be progressive. It has a steady growth. Association agents report business throughout the State very encouraging. The associations are in good condition, and the people show great confidence in them. The Downey-street Savings and Loan Association has elected the following officers for the ensuing year: President, J. T. Warner; secretary, Peter Ohleyer; treasurer, Theodore Sander. The National Building and Loan Herald of New York contains a consensus of opinion from associations in every part of the United States as to the effect of the financial panic. The general tenor of the eighty replies is that the situation of the delinquent list has not appreciably increased, and withdrawals have not been heavy.

REALTY DULL, PRICES FIRM

VALUES NOT DEPRECIATED BY THE STATE OF THE MARKET.

Agents Say There is No Use Waiting For a Decline—Few Sales But Many Inquiries—Transfers—Building Associations.

In no direction does there appear to be any life in the real estate market. Urban and suburban property is stagnant, and real estate dealers are sitting idly in their offices waiting. There is little doubt that the fear of hard times for the coming winter is having its effect upon realty, but through it all prices remain firm, values are unchanged.

This one fact illustrates in a remarkable degree the value of Indianapolis realty. The price of real estate in this city has risen steadily, year by year. There has been no sudden boom, no fictitious inflation of values, but as the needs of the city increased, as more people settled here, the price has risen slowly but steadily with the demand, and an appreciable rise may be noted when comparisons are made with prices of five years ago. The financial stringency and the fear of hard times have helped to weaken the market. The value of the city's ground is an assured thing and is not subject to the caprice of the money market. Many people who, having hastily drawn their money from the banks, are waiting for a drop in the price of property to invest, will, if they wait long enough, wish that they had taken opportunity of the times and had bought at present. Real estate men are unanimous in their opinion that prices will remain firm.

One good transaction that took place during the week was the sale by Franklin P. Wilson of four lots in Edgewater, an addition which is bordered by Fall creek. They were purchased for \$6,000 for the purpose of building residences thereon by William VanArsdal.

Few sales are recorded, but inquiries for good business property come from all parts of the United States. While this is so, Indianapolis realty is in no danger. Times are quiet now with realty, as they are in many other lines, but the men who live by buying and selling land are confident and hopeful of a good time coming.

The Transfer Record.

The following table shows the transfers in Marion county since January 1, 1892: Transfers for 1892—Sales, 2,776; consideration, \$11,626,056. January, 1893—Sales, 276; consideration, 754,137. February, 1893—Sales, 297; consideration, 763,162. March, 1893—Sales, 502; consideration, 821,698. April, 1893—Sales, 421; consideration, 1,383,247. May, 1893—Sales, 697; consideration, 1,383,247. June, 1893—Sales, 421; consideration, 742,219. July, 1893—Sales, 415; consideration, 681,057. August, 1893—Sales, 258; consideration, 429,242.

Building and Loan Associations.

The demand for loans is on the increase. Many of the associations are prepared to loan money now. Money is in demand, but withdrawals are not exceptionally heavy. Many people who gave notice of withdrawal have countermanded their notice. The National has no money to loan. It has plenty of first-class loans outstanding. The Center Building and Loan Association will issue a new series of stock October 2. While the mills are idle the associations of Terre Haute propose to suspend fines against delinquent shareholders. A building association, exclusively for colored people, is to be started in Maryland. The officers are already elected. The ruling of the State Board of Equalization, that paid-up shares in associations are not exempted from taxation, will be tested. The Atlas will have money to loan in a few days. The reports of this association show it to be progressive. It has a steady growth. Association agents report business throughout the State very encouraging. The associations are in good condition, and the people show great confidence in them. The Downey-street Savings and Loan Association has elected the following officers for the ensuing year: President, J. T. Warner; secretary, Peter Ohleyer; treasurer, Theodore Sander. The National Building and Loan Herald of New York contains a consensus of opinion from associations in every part of the United States as to the effect of the financial panic. The general tenor of the eighty replies is that the situation of the delinquent list has not appreciably increased, and withdrawals have not been heavy.

EXPLOSION IN A CELLAR.

Potter's Drug Store and Jones & Perry's Grocery Damaged. Willie Schultz, fourteen years old, lives at 77 Kenon street, and up to 5 o'clock yesterday afternoon was employed in the grocery of Jones & Perry, in North street near Pennsylvania. Under the rear of C. C. Potter's drug store, which is on the corner of the two streets, and the east side of the grocery is a double cellar. The grocery cut provisions stored in the cellar a day or two ago and killed two rats. Willie Schultz started for the cellar at 5 o'clock to remove the bodies of the rats. As he opened the door at the foot of the stairway he was greeted by an explosion, presumably of gas, which was heard for four blocks, and caused a run for the fire department. His body was blown nearly back to the top of the stairway, and was burned about the face and hands and his right leg was painfully injured. The door which he opened was jammed into the wall, bricks in the cellar tumbled down and about six-hundred-dollars damages resulted to the drug and grocery stores. The explosion shook bottles and boxes of the shelves of the grocery. There were several customers in at the time, but they were not hurt. Minnie Peral, a colored girl employed by Mrs. Skully, above the grocery, ran to the window after the shock. The crowd below shouted to her not to jump. But she jumped and broke her arm, as well as bruised her body. The greatest damage was in the rear room of the drug store. The force of the explosion tore the plastering of the walls and ceiling. Pictures dropped from their nails to the floor, and a board partition was scattered about the apartment. The loss will reach \$500. The cause of the explosion is not known. The boy who went into the cellar says he did not light a match. To-day the cause of the explosion was traced to gas, which leaked in, the proprietors say, from a Trust company main that supplies incandescent wall-bulb burners. The pipe was broken unaccountably.

SILVER JUBILEE AT ST. JOSEPH'S.

Father Alerding Has Been a Priest Twenty-Five Years. The silver jubilee of the Rev. Father Herman Alerding, pastor of St. Joseph's church, was celebrated to-day. There was solemn high mass at 10 o'clock this morning. To-night a general reception in honor of Father Alerding will be given by the parishioners at St. Joseph's Hall. Last night the pupils of St. Joseph's Academy gave an entertainment in honor of the occasion. Miss N. Murray made an address. The program, which included several musical numbers, ended with a tableau, "Coronation." Father Alerding, a native of Kentucky, is forty-eight years old. He was ordained priest at St. Meinrad's, Indiana, by Bishop St. Paul, September 22, 1868. A dispensation was necessary, for he had not arrived at the canonical age. Of his twenty-five years in the priesthood he has spent nineteen in St. Joseph's parish. An illustrated souvenir of the occasion on four pages of card paper has been issued by the parishioners, picturing some of the material things accomplished under Father Alerding's pastorate. The church, the school and hall, the academy and paragon are shown. These structures represent, with the real estate, an expenditure of \$80,000. The buildings have all been erected within the last thirteen years. An address by M. W. Carr is on the fourth page of the souvenir.

DROWNED IN EAGLE CREEK.

The Body of an Unknown Man Found By Two Fishermen.

Two colored men fishing in Eagle creek, yesterday afternoon, noticed an object floating on the surface of the water. Looking closer they saw that it was the body of a man, and observing a boat they pulled it out and brought the body ashore. The coroner was notified and Collier & Murphy removed the body to their morgue to await identification. The body is still at the morgue. About fifty people have viewed it, and many people have been visited by the coroner, but the identity of the dead man is still a mystery. He is evidently a German, about fifty-five or sixty years of age. He is five feet, nine inches in height; weight about 180 lbs.; 200 pounds. His hair is short and gray; his beard and moustache reddish, intermingled with gray. His hands bear evidences of hard work; his clothes were good. He had on a new shirt which had never been in the laundry. Bought from the New York store. His straw hat came from Ryan's. He had on a pair of new shoes, unmarked.

The body, when found, was slightly decomposed, much bloated and the skin was peeling off. Nothing was found in his pockets but a handkerchief without a name. No mark of violence had been observed, slight cut on the forehead, from which the blood trickled down over the man's face. This may have been caused by a fall. Resident Mr. Jackson states that he was noticed passing through that place, but nobody seems to know who he is.

A ST. PAUL SENSATION.

Jules H. Burwell Charged With Misappropriating \$50,000. St. Paul, September 22.—Business and social circles were shocked last evening upon learning that Jules H. Burwell, vice president, treasurer and general manager of the Mast, Buford & Burwell Carriage Company, was charged with the misappropriation of \$50,000 of the funds of the firm. The statement was at first received with incredulity, but inquiry of the clerk of the District Court set all doubt at rest, as complaint had already been filed there by the company, formally charging Burwell with illegally taking \$50,000. The firm was forced into an assignment on Monday by the financial method of Mr. Burwell, Victor Bohmsap being assigned as assignee. The complaint charges that Burwell has been a member of the firm for eight years at a salary of \$5,000 a year, and as treasurer has at all times had access to the funds of the firm. It states that Burwell, instead of taking the \$50,000 which was his rightful due annually, appropriated to his own use sums far in excess of the amount of his salary. The amount wrongfully taken, \$4,000 is charged to have been taken in money and in kind, in the form of carriages and other merchandise. Among the items given is one of \$9,000 which Burwell is alleged to have taken for the purpose of erecting a fine residence on Summit avenue. The amount of \$4,000 & Burwell, therefore, asks judgment against Jules H. Burwell for the sum of \$90,000.

The leasing capitalist of the firm is P. M. Mast, of Springfield, Ill. Burd is a resident of Moline, Ill. Jules H. Burwell has been considered one of the leading citizens of Minnesota. Last year he was president of the State Agricultural Society, and last June he was the central figure in carrying out the program of the Hill celebration. He is a prominent Free Mason and has long been known as one of the foremost "hustlers" of St. Paul.

Meteorite Display Last Night.

There was a brilliant meteorite display shortly after midnight last night. There was a perfect shower of shooting stars. Early in the evening a meteor was seen moving from the west part of the sky directly toward the moon. Its progress was slow, and its head was a whitish and iridescent. It seemingly shot into the moon and disappeared.

Alleged Shortage of An Agent.

Emil Walschner & Son contemplate closing their branch store at Muncie. It was in charge of W. F. Gunter, who, the firm says, has gone away, carrying with him about \$500 belonging to the house. It is reported by the firm that the agent traded new organs for old ones, and failed to account for the difference in cash.

Death of Smith Williams.

Smith Williams, age fifty-three, formerly superintendent of the county poor asylum for about five years, died of consumption last night at his home, in Hancock. He leaves a widow and son. O. W. Williams, who was born in Rockville, Parke county. He was a member of the Presbyterian church.

NOTICE

STATE FAIR VISITORS

When you come to Indianapolis, and want to see sights, you will miss the most interesting feature if you fail to see the Greatest of All Cloak Stores in the Western or Eastern States.

This room is 150 feet deep and 50 feet wide, finished all through in finest quartered oak and Hungarian maple. Has a check room, a ladies' toilet room; also a room to eat lunches in—and, in general, a place for strangers in the city to rest.

During Fair week we will offer Cloaks, Wraps, Furs, Etc., at inducements worth talking about. We don't advertise like some of the small shops with old job lots of goods, such as you often read in papers—\$5 Jackets for 98c; \$10 Jackets for \$2.50, and so on. Can not any reasonable person see by this kind of advertising what the firms are, and what to expect? Cost nothing to go to the first Cloak House that opened in Indiana. Once more we say, WELCOME to all. Call at our store. Largest, Best Cloak House.
